<sup>1</sup> The term provision is used in the CRD when defining the basis for shortfall/provision excess. In Nordea, the term allowances is used when referring to the same treatment.

**Core tier 1 capital and tier 1 capital**

Core tier 1 capital is defined as eligible capital including eligible reserves, net of regulatory required deductions done directly to the tier 1 capital. The capital recognised as core tier 1 capital holds the ultimate characteristics for loss absorbance defined from a "going concern" perspective and is the most subordinated claim in terms of liquidation. The tier 1 capital is defined as core tier 1 capital and capital of the same or close to the character of eligible capital and eligible reserves. The tier 1 capital can include a limited part of hybrid capital loans (up to 50% of tier 1, depending on the specific terms of the instruments). Deductions mandatory for tier 1 capital will accordingly also be required as deduction in the defined core tier 1 capital.

**Eligible capital**

Paid up capital is equal to the share capital contributed by shareholders.

**Eligible reserves**

Eligible reserves consist primarily of retained earnings, other reserves, minority interest and income from current year. Retained earnings are earnings from previous years reported via the income statement. Other reserves are related to revaluation and translation reserves referred to acquisitions and associated companies under the equity method. The equity interests of minority shareholdings in companies that are fully consolidated in the financial group are also included. Positive income from current year is included as eligible capital after verification by the external auditors. However, negative income must always be included as a deduction.

**Hybrid capital loans subject to limits**

The requirement for including hybrid capital loans, or undated subordinated loans, in tier 1 capital is restricted and repurchase can normally not take place until five years after the loan was originally issued. Hybrid capital loans may be repaid only upon a decision by the Board of Directors of Nordea Bank Finland and with the permission of the Finnish FSA. Further, there are restrictions related to step-up conditions, order of priority, interest payments under constraint conditions and the level of amount that can be part of the tier 1 capital.

**Deductions from tier 1 capital**

**Proposed/actual dividend**

In relation to income for the period, the corresponding dividend should be deducted. The amount is deducted from the tier 1 capital based on the proposal from the Board of Directors of Nordea Bank Finland to be decided at the annual general meeting of Nordea Bank Finland's shareholders.

**Deferred tax assets**

In accordance with local legal requirements, deferred tax assets have been deducted from the tier 1 capital. The deducted amount is calculated based on the accounting standards relevant for the individual companies included in the financial group.

**Intangible assets**

A significant part of deducted intangible assets contains goodwill and other intangible assets related to IT software and development.

**Deductions for investments in credit institutions**

The institutions should in its capital base deduct equity holdings and some other types of contributions to institutions that are not consolidated into the financial group (in Nordea Bank Finland foremost associated companies). 50% should be deducted from tier 1 capital and 50% should be deducted from tier 2 capital.

**IRB provisions shortfall**

In accordance with Finnish legislation, the differences between the actual IRB provision made for the related exposure and the expected loss are adjusted for in the capital base. The negative difference (when the expected loss amount is larger than the provision amount) is defined as a shortfall. According to the rules in the CRD, the shortfall amount is to be deducted from the capital base and be divided equally into tier 1 capital and tier 2 capital. A positive difference (provisions exceeding expected loss) can be included in tier 2 capital subject to certain limitations (maximum 0.6% of IRB RWA).

**Tier 2 capital**

The tier 2 capital must be subordinated to depositors and general creditors of the bank. It cannot be secured or covered by a guarantee of the issuer or related entity or include any other arrangement that legally or economically enhances the seniority of the claim vis-à-vis depositors and other bank creditors.

**Tier 2 subordinated loans**

The tier 2 capital consists mainly of subordinated debt and some specific deductions. Tier 2 capital includes two different types of subordinated loan capital: undated loans and dated loans. The total tier 2 amount may not exceed the tier 1 capital amount and dated tier 2 loans may not exceed half the amount of tier 1. The limits are set net of deductions.

The basic principle for subordinated debt in the capital base is the order of priority in case of a default or bankruptcy situation. Under such conditions, the holder of the subordinated loan would be repaid after other creditors but before shareholders. The share of the outstanding loan amount that is possible to include in the tier 2 capital related to dated loans is reduced if the remaining maturity is less than five years.

The table on the next page shows the booked outstanding amounts of undated subordinated loans included in the tier 2 capital. Call date means the date when the issuer has the legal right to redeem outstanding loan amounts according the terms of agreement. The book value in the table can deviate from capital amounts used in the capital base due to swap arrangements and adjustments for maturities.

**Other tier 2 capital**

Other additional funds consist of adjustment to valuation differences in available-for-sale equities transferred to core additional own funds. Unrealised gains from equity holdings classified as available-for-sale securities can, according to regulation, only be included in tier 2 capital. Nordea has no significant holdings in this category and has only a minor impact in the tier 2 capital from such items.

**Note 39 Capital adequacy, cont.****Deductions from tier 2 capital****Deductions for investments in credit institutions**

The institutions should in its capital base deduct equity holdings and some other types of contributions to institutions that are not consolidated into the financial group (in Nordea Bank Finland foremost associated companies). 50% should be deducted from tier 1 capital and 50% should be deducted from tier 2 capital.

**IRB provisions excess (+) / shortfall**

In accordance with Finnish legislation, the differences between the actual IRB provision made for the related exposure and the expected loss are adjusted for in the capital base. The negative difference (when the expected loss amount is larger than the provision amount) is defined as a shortfall. According to the rules in the CRD, the shortfall amount is to be deducted from the capital base and be divided equally into tier 1 capital and tier 2 capital. A positive difference (provisions exceeding expected loss) can be included in tier 2 capital subject to certain limitations (maximum 0.6% of IRB RWA).

**Undated loans**

**Note 40 Classification of financial instruments, cont.****Changes in fair values attributable to changes in credit risk**

The financial liabilities designated at fair value through profit or loss exposed to changes in credit risk of the comparison year are related to the funding of the Markets operation. The funding of Markets is generally of such a short term nature that the effect of changes in own credit risk is not significant.

**Comparison of carrying amount and contractual amount to be paid at maturity**

**Note 41 Assets and liabilities at fair value, cont.****Estimation of fair value for assets and liabilities**

Financial assets and financial liabilities in the balance sheet are generally measured at fair value, with the exception of loans, deposits and borrowings and issued securities.

The carrying amounts on loans, deposits and borrowings and issued securities are adjusted for the value of the fixed interest term, unless the interest rate is hedged, in order to estimate the fair values that are presented in the tables on previous pages. The value of the fixed interest term is a result of changes in the relevant market interest rates. The discount rates used are based on current market rates for each term. The fair value of the hedged interest rate risk is included in the balance sheet item "Fair value changes of the hedged items in portfolio hedge of interest rate risk".

Fair value is estimated to be equal to the carrying amount for short-term financial assets and financial liabilities. The carrying amount is a reasonable approximation of fair value due to limited credit risk and short time to maturity.

Fair value is set to carrying amount, in the tables on previous pages, for assets and liabilities for which no reliable fair value has been possible to estimate. This is valid for the line items investments in associated undertakings, investments in group undertakings, intangible assets, property and equipment and provisions.

Nordea holds very limited amounts of equity instruments measured at cost. Fair value is set to carrying amount for these instruments as the fair value cannot be measured reliably.

For further information about valuation of items normally measured at fair value, see Note 1.

**Deferred Day 1 profit or loss**

In accordance with the Group's accounting policy as described in Note 1, if there are significant unobservable inputs used in the valuation technique, the financial instrument is recognised at the transaction price and any trade date profit is deferred. The table below shows the aggregate difference yet to be recognised in the income statement at the beginning and end of the period and a reconciliation of changes in the balance of this difference (movement of deferred Day 1 profit or loss).

**Determination of fair value from quoted market prices or valuation techniques**

Fair value measurements are categorised using a fair value hierarchy.

The financial instruments carried at fair value have been categorised under the three levels of the IFRS fair value hierarchy that reflects the significance of inputs. The categorisation of these instruments is based on the lowest level input that is significant to the fair value measurement in its entirety. To categorise the instruments into the three levels, the relevant pricing models for each product are considered in combination with used input market data, the significance of derived input data, the complexity of the model and the accessible pricing data to verify model input. Although the complexity of the model is considered, a high complexity does not by default require that products are categorised into level 3.

It is the use of model parameters and the extent of unobservability that defines the fair value hierarchy levels. For bonds the categorisation into the three levels is based on the internal pricing methodology. The bonds can either be directly quoted in active markets (level 1) or measured using a methodology giving a quote based on observable inputs (level 2). Level 3 bonds are characterised by illiquidity.

Valuations of Private Equity Funds (PEF) and unlisted equities will in nature be more uncertain than valuations of more actively traded equity instruments. Emphasis is put on using a consistent approach across all assets and over time. The methods are consistent with the guideline "International Private Equity and Venture Capital Valuation Guidelines" issued by EVCA (European Venture Capital Association). The EVCA guidelines are considered as best practice in the PEF industry. For US based funds, similar methods are applied.

Level 1 consist of financial assets and financial liabilities valued using unadjusted quoted prices in active markets for identical assets or liabilities. An active market for the asset or liability is a market in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis. This category includes listed derivatives, listed equities, government bonds in developed countries, and most liquid mortgage bonds and corporate bonds where direct tradable price quotes exist.

Level 2 consists of financial assets and financial liabilities which do not have directly quoted market prices available from an active market. The fair values are estimated using a valuation technique or valuation model based on market prices or rates prevailing at the balance sheet date and any unobservable inputs are insignificant in the fair value. This is the case for the majority of NBF's OTC derivatives, securities purchased/sold under resale/repurchase agreements, securities borrowed/loaned and other instruments where an active market supplies the input to the valuation technique or model.

Level 3 consists of those types of financial instruments for which fair values cannot be obtained directly from quoted market prices or indirectly using valuation techniques or models supported by observable market prices or rates. This is generally the case for investments in unlisted securities, private equity funds, hedge funds and both more complex or less active markets supplying input to the technique or model for OTC derivatives, certain complex or structured financial instruments such as CLNs and CDOs, and illiquid bonds.

**Note 41 Assets and liabilities at fair value, cont.**

The following table presents the valuation methods used to determine fair values of financial instruments carried at fair value.

**Note 41 Assets and liabilities at fair value, cont.****Transfers between level 1 and 2**

During the year, Nordea Bank Finland transferred debt securities of EUR 2,982m (1,158m) from level 1 to level 2 and EUR 997m (0) from level 2 to level 1 of the fair value hierarchy for financial assets and liabilities which are recorded at fair value. The reason for the transfers from level 1 to level 2 was that the instruments ceased to be actively traded during the year and fair values have now been obtained using valuation techniques with observable market inputs. The reason for the transfer from level 2 to level 1 was that the instruments have again been actively traded during the year and reliable quoted prices are obtained in the market.

**Movements in level 3**

The following table shows a reconciliation of the opening and closing carrying amount of level 3 financial assets and liabilities recognised at fair value.

<sup>1</sup> Relates to those assets and liabilities held at the end of the reporting period.

**Note 41 Assets and liabilities at fair value, cont.****Sensitivity of level 3 financial instruments measured at fair value to changes in key assumptions**

Included in the fair value of financial instruments carried at fair value on the balance sheet are those estimated in full or in part using valuation techniques based on assumptions that are not supported by market observable prices or rates. There may be uncertainty about a valuation, resulting from the choice of valuation technique or model used, the assumptions embedded in those models, the extent to which inputs are not market observable, or as a result of other elements affecting the valuation technique. Portfolio adjustments are applied to reflect such uncertainties and are deducted from the fair values produced by the models or other valuation techniques (for further information see Note 1 section 10 "Determination of fair value of financial instruments").

This disclosure shows the potential impact of the relative uncertainty in the fair value of financial instruments for which the valuation is dependent on unobservable input parameters. The estimates disclosed below are likely to be greater than the true uncertainty in the fair value of these instruments, as it is unlikely in practice that all unobservable parameters would be simultaneously at the extremes of their ranges of reasonably possible alternatives. The disclosure is neither predictive nor indicative of future movements in fair value.

The following table shows the sensitivity of the fair value of level 3 instruments to changes in key assumptions, by class of instruments. Where the exposure to an unobservable parameter is offset across different instruments then only the net impact is disclosed in the table.

In order to calculate the effect on level 3, fair values from altering the assumptions of the valuation technique or model, the sensitivity to unobservable input data is assessed. For the derivatives portfolio, key inputs that are based on pricing model assumptions or unobservability of market data inputs are replaced with alternative estimates or assumptions, and their impact on valuation is computed. The majority of the effect on the derivatives is related to various types of correlations or correlation related inputs in credit derivatives, interest rate OTC derivatives or OTC structured equity derivatives. For the level 3 portfolios of shares and debt securities the fair value was increased and decreased within a range of 3-10 percentage units, which are assessed to be reasonable changes in market movements.

## Note 42 Transferred assets and obtained collaterals

### Transferred assets that are not derecognised in their entirety and associated liabilities

All assets transferred continue to be recognised on the balance sheet if Nordea is still exposed to changes in the fair value of the assets. This is the case for repurchase agreements and securities lending transactions.

Repurchase agreements are a form of collateralised borrowing where Nordea sells securities with an agreement to repurchase them at a later date at a fixed price. The cash received is recognised as a deposit (liability). Securities delivered under repurchase agreements are not derecognised from the balance sheet.

Securities lending transactions are transactions where Nordea lends securities it holds to a counterpart and receives a fee.

As both repurchase agreements and securities lending transactions result in the securities being returned to Nordea, all risks and rewards of the instruments transferred are retained by Nordea, although they are not available for Nordea during the period during which they are transferred. The counterpart in the transactions holds the securities as collateral, but has no recourse to other assets in Nordea.

The securities still reported in the balance sheet and the corresponding liabilities are measured at fair value.

### Obtained collaterals which are permitted to be sold or repledged

NBF obtains collaterals under reverse repurchase and securities borrowing agreements which, under the terms of the agreements, can be sold or repledged. The transactions are conducted under standard agreements employed by financial markets participants. Generally, the agreements require additional collateral to be provided if the value of the securities falls below a predetermined level. Under standard terms for most repurchase transactions, the recipient of collateral has an unrestricted right to sell or repledge it, subject to returning equivalent securities on settlement of the transactions. The fair value of the securities obtained as collateral under reverse repurchase and securities borrowing agreements is disclosed below.

#### Note 44 Related-party transactions

Shareholders with significant influence and close family members to key management personnel in the Nordea Group as well as companies significantly influenced by key management personnel or by close family members to key management personnel in Nordea Group are considered to be related parties to Nordea. Included in this group of related parties are Sampo Oyj and Aegon Asset Management. If transactions with these related parties are made in Nordea's and the related parties' ordinary course of business and on the same criteria and terms as those for comparable transactions with parties of similar standing and if they do not involve more than normal risktaking, the transactions are not included in the table.

The terms "group undertakings" and "associated undertakings" refer to group undertakings and associated undertakings of the Nordea Bank Finland Group. In addition to the parent company figures stated above, the parent company's assets included receivables, interest-bearing securities, derivatives and other assets from other Nordea group undertakings in the amount of EUR 39,885m (54,411), liabilities in the amount of EUR 45,688m (36,683), profit before loan losses in the amount of EUR -569 m (-1,033) and off-balance sheet commitments in the amount of EUR 218,491m (431,155). Off-balance sheet transactions with Nordea group associated undertakings amounted to EUR 7,895m (8,193) and corresponding balance sheet values of derivatives were EUR 268m (246) in assets and EUR 4m (80) in liabilities.

**Compensations and loans and receivables to key management personnel**

Compensations and loans to key management personnel are specified in Note 8.

## Note 46 Credit risk disclosure

Credit risk management and credit risk analysis is described in the Risk, Liquidity and Capital management section of the Board of Directors' Report. Additional information on credit risk is also disclosed in the Capital and Risk management Report (Pillar 3) 2012, which is available on [www.nordea.com](http://www.nordea.com).

### Group

| Derivatives                      | 31,580         | 42,466         |
| <b>Exposure At Default (EAD)</b> | <b>206,720</b> | <b>230,769</b> |

Tables presented in this Note, containing exposure, are presented as Exposure At Default (EAD). EAD is the exposure after applying credit conversion factors (CCF).

### Link between credit risk exposure and the balance sheet

This section discloses the link between the loan portfolio as defined in accordance with accounting standards and exposure as defined in accordance with the Capital Requirements Directive (CRD). The main differences are outlined in this section to illustrate the link between the different reporting methods.

Original exposure is the exposure before taking into account substitution effects stemming from credit risk mitigation, credit conversion factors for off-balance exposure and allowances within the standardised approach. In this note, however, exposure is defined as exposure at default (EAD) for IRB exposure and exposure value for standardised exposure if nothing else is stated. Credit risk exposure presented in this note, in accordance with the CRD, is divided between exposure classes where each exposure class is divided into exposure types as follows:

- On-balance sheet items
- Off-balance sheet items (e.g. guarantees and unutilised amounts of credit facilities)
- Securities financing (e.g. repurchase agreements and securities lending)
- Derivatives

Items presented in the Annual Report, in accordance with the accounting standards, are divided as follows:

- On-balance sheet items (e.g. loans to credit institutions, loans to the public, reversed repurchase agreements, positive fair value for derivatives, treasury bills and interest-bearing securities)
- Off-balance sheet items (e.g. guarantees and unutilised amounts of credit facilities)

The table below shows the link between the CRD credit risk exposure and items presented in the Annual Report.

### On-balance sheet items

As shown in the table below, the following items have been excluded from the balance sheet, when calculating on-balance exposure in accordance with the CRD:

- Market-risk-related items in the trading book, such as certain interest-bearing securities and treasury bills.
- Reverse repurchase agreements, derivatives and securities lending. These transactions are either included in the calculation of market risk in the trading book or reported as separate exposure types (derivatives or securities financing).
- Other, mainly allowances, intangible assets and deferred tax assets.

<sup>1</sup> Derivatives are included in banking and trading books, but not at book values. Counterparty risk in trading derivatives is included in the credit risk.

**Off-balance sheet items**

The following off-balance sheet items specified in the Annual Report are excluded when off-balance exposure is calculated in accordance with the CRD:

- Assets pledged as security for own liabilities and “Other assets pledged” (apart from leasing). These transactions are reported as a separate exposure type, securities financing.
- Derivatives

**Note 46 Credit risk disclosure, cont.**

The table below presents the distribution of collateral used in the capital adequacy calculation process. The table shows real estate to be the major part of the eligible collateral items in relative terms, also showing that residential real estate as collateral experienced the highest relative increase during the year. Real estate is commonly used as collateral for credit risk mitigation purposes. There is no certain concentration of real estate collateral to any region within the Nordic and Baltic countries. Financial collateral, with an LGD of 0%, has also increased notably during the year. Other physical collateral consist of vessels, machinery, equipment and other movables.

When Nordea sells protection in a CDO transaction, Nordea carries the risk of losses in the reference portfolio on the occurrence of a credit event. When Nordea buys protection in a CDO transaction, any losses in the reference portfolio, in which Nordea has not necessarily invested, triggered by a credit event are then carried by the seller of protection.

The risk from CDOs is hedged with a portfolio of CDSs. The risk positions are subject to various types of market risk limits, including VaR, and the CDO valuations are subject to fair value adjustments for model risk. These fair value adjustments are recognised in the income statement.

# Auditors' report

*This document is an English translation of the Finnish auditor's report. Only the Finnish version of the report is legally binding.*

## **To the Annual General Meeting of Nordea Bank Finland Plc**

We have audited the accounting records, the financial statements, the report of the Board of Directors, and the administration of Nordea Bank Finland Plc for the year ended on 31 December 2012. The financial statements comprise both the consolidated and the parent company's statement of financial position, income statement, statement of comprehensive income, statement of changes in equity and statement of cash flows, and notes to the financial statements.

### *Responsibility of the Board of Directors and the Managing Director*

The Board of Directors and the Managing Director are responsible for the preparation of financial statements that give a true and fair view in accordance with International Financial Reporting Standards (IFRS) as adopted by the EU, as well as for the preparation of financial statements and the report of the Board of Directors that give a true and fair view in accordance with the laws and regulations governing the preparation of the financial statements and the report of the Board of Directors in Finland. The Board of Directors is responsible for the appropriate arrangement of the control of the company's accounts and finances, and the Managing Director shall see to it that the accounts of the company are in compliance with the law and that its financial affairs have been arranged in a reliable manner.

### *Auditor's responsibility*

Our responsibility is to express an opinion on the financial statements, on the consolidated financial statements and on the report of the Board of Directors based on our audit. The Auditing Act requires that we comply with the requirements of professional ethics. We conducted our audit in accordance with good auditing practice in Finland. Good auditing practice requires that we plan and perform the audit to obtain reasonable assurance about whether the financial statements and the report of the Board of Directors are free from material misstatement, and whether the members of the Board of Directors of the parent company and the Managing Director are guilty of an act or negligence which may result in liability in damages towards the company or have violated the Finnish Credit Institutions Act, the Limited Liability Companies Act or the articles of association of the company.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements and the report of the Board of Directors. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation of financial statements and report of the Board of Directors that give a true and fair view in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements and the report of the Board of Directors.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

### *Opinion*

In our opinion,

- both the consolidated and the parent company's financial statements give a true and fair view of their financial position, financial performance, and cash flows in accordance with International Financial Reporting Standards (IFRS) as adopted by the EU
- the financial statements and the report of the Board of Directors give a true and fair view of both the consolidated and the parent company's financial performance and financial position in accordance with the laws and regulations governing the preparation of the financial statements and the report of the Board of Directors in Finland
- the information in the report of the Board of Directors is consistent with the information in the financial statements.

*Other opinions*

We support the adoption of the financial statements. The proposal by the Board of Directors regarding the treatment of distributable funds is in compliance with the Limited Liability Companies Act. We support that the Board of Directors of the parent company and the Managing Director be discharged from liability for the financial period audited by us.

Helsinki, 28 February 2013

1) Total shares registered were 4,047 million.

2) Restricted capital was 4,047m, unrestricted capital was EUR 21,987m.

3) Refers to the Long Term Incentive Programme (LTIP). LTIP 2011 was hedged by issuing 4,730,000 C-shares. The shares have been bought back and converted to ordinary shares. The total holding of own shares related to LTIP is 18.2 million.

4) Refers to the change in the holding of own shares related to the Long Term Incentive Programme, trading portfolio and Nordea's shares within portfolio schemes in Denmark. The number of own shares were 20.7 million.

5) In connection to the rights issue in 2009 an assessment was made on the VAT Nordea would have to pay on the transaction costs. This assessment has been changed in 2011 based on a new tax case law.

### Comments on the cash flow statement

The cash flow statement has been prepared in accordance with IAS 7. The cash flow statement shows inflows and outflows of cash and cash equivalents during the year. Nordea's cash flow has been prepared in accordance with the indirect method, whereby operating profit is adjusted for effects of non-cash transactions such as depreciation and loan losses. The cash flows are classified by operating, investing and financing activities.

### Operating activities

Operating activities are the principal revenue-producing activities and cash flows are mainly derived from the operating profit for the year with adjustment for items not included in cash flow and income taxes paid. Adjustment for non-cash items includes:

| EURm                                                              | 2011       | 2010         |
|-------------------------------------------------------------------|------------|--------------|
| Depreciation                                                      | 190        | 166          |

| Change in bonus potential to policyholders                        | -575       | 159          |
| Change in fair value of the hedge items, assets/liabilities (net) | 1,842      | -346         |
| Other                                                             | 853        | 2,094        |
| <b>Total</b>                                                      | <b>537</b> | <b>1,619</b> |

Changes in operating assets and liabilities consist of assets and liabilities that are part of normal business activities, such as loans, deposits and debt securities in issue. Changes in derivatives are reported net.

Cash flow from operating activities includes interest payments received and interest expenses paid with the following amounts:

| EURm                       | 2011   | 2010  |
|----------------------------|--------|-------|
| Interest payments received | 11,896 | 9,933 |
| Interest expenses paid     | 6,376  | 4,542 |

### Investing activities

Investing activities include acquisitions and disposals of non-current assets, like property and equipment, intangible and financial assets. Aggregated cash flows arising from acquisition and sale of business operations are presented separately and consist of:

| EURm                                                                    | 2011     | 2010       |
|-------------------------------------------------------------------------|----------|------------|
| <b>Acquisition of business operations</b>                               |          |            |

### Financing activities

Financing activities are activities that result in changes in equity and subordinated liabilities, such as new issues of shares, dividends and issued/amortised subordinated liabilities.

### Cash and cash equivalents

The following items are included in Cash and cash equivalents:

| EURm                                            | 31 Dec 2011   | 31 Dec 2010   |
|-------------------------------------------------|---------------|---------------|
| Cash and balances with central banks            | 3,765         | 10,023        |
| Loans to credit institutions, payable on demand | 18,841        | 3,683         |
|                                                 | <b>22,606</b> | <b>13,706</b> |

Cash comprises legal tender and bank notes in foreign currencies. Balances with central banks consist of deposits in accounts with central banks and postal giro systems under government authority, where the following conditions are fulfilled;

- the central bank or the postal giro system is domiciled in the country where the institution is established
- the balance on the account is readily available at any time.

Loans to credit institutions, payable on demand include liquid assets not represented by bonds or other interest-bearing securities.

1) End of the year.

2) Increase between 2008 and 2009 due to Nordea's rights issue.

3) 2007-2009 restated due to the rights issue.

# Business definitions

These definitions apply to the descriptions in the Annual Report.

**Allowances in relation to impaired loans** Allowances for individually assessed impaired loans divided by individually assessed impaired loans before allowances.

**Basic earnings per share** Net profit for the year divided by the weighted average number of outstanding shares, non-controlling interests excluded.

**Capital base** Capital base includes the sum of the Tier 1 capital and the supplementary capital consisting of subordinated loans, after deduction of the carrying amount of the shares in wholly owned insurance companies and the potential deduction for expected shortfall.

**Cost of equity (%)** Required return by investors on the Nordea share, measured as the long risk free euro rate plus required average risk premium to invest in equities multiplied by Beta, which reflects the Nordea share's volatility and correlation with market volatility.

Cost of equity in EUR is defined as Cost of equity (%) times Economic capital. The Cost of equity is set by management once a year as a parameter to manage risk appetite and investment level.

**Cost/income ratio** Total operating expenses divided by total operating income.

**Diluted earnings per share** Net profit for the year divided by the weighted average number of outstanding shares after full dilution, non-controlling interests excluded.

**Economic capital (EC)** Internal estimate of required capital and measures the capital required to cover unexpected losses in the course of its business with a certain probability. EC uses advanced internal models to provide a consistent measurement for Credit Risk, Market Risk, Operational Risk, Business Risk and Life Insurance Risk arising from activities in Nordea's various business areas.

The aggregation of risks across the group gives rise to diversification effects resulting from the differences in risk drivers and the improbability that unexpected losses occur simultaneously.

**Economic profit** Deducting Cost of equity from Risk-adjusted profit.

**Equity per share** Equity as shown in the balance sheet after full dilution and non-controlling interests excluded divided by the number of shares after full dilution.

**Expected losses** Normalised loss level of the individual loan exposure over a business cycle as well as various portfolios.

**Impairment rate, gross** Individually assessed impaired loans before allowances divided by total loans before allowances.

**Impairment rate, net** Individually assessed impaired loans after allowances divided by total loans before allowances.

**Loan loss ratio** Net loan losses (annualised) divided by opening balance of loans to the public (lending).

**MCEV (Market Consistent Embedded Value)** Estimate of the value a shareholder would put on a portfolio of in-force life and pension business based on objective market return. No franchise value or other additional value is included in MCEV.

**Non-performing, not impaired** Past due loans, not impaired due to future cash flows (included in Loans, not impaired).

**Price to Book** Nordea's stock market value relative to its book value.

**RAROCAR, % (Risk-adjusted return on capital at risk)**, Risk-adjusted profit relative to Economic capital.

**Return on equity** Net profit for the year excluding non-controlling interests as a percentage of average equity for the year. Average equity including net profit for the year and dividend until paid, non-controlling interests excluded.

**Risk-adjusted profit** Total income minus total operating expenses, minus Expected losses and standard tax (26 % 2011). In addition, Risk-adjusted profit excludes major non-recurring items.

**Risk-weighted assets** Total assets and off-balance-sheet items valued on the basis of the credit and market risks, as well as operational risks of the Group's undertakings, in accordance with regulations governing capital adequacy, excluding assets in insurance companies, carrying amount of shares which have been deducted from the capital base and intangible assets.

**Tier 1 capital** Proportion of the capital base, which includes consolidated shareholders' equity excluding investments in insurance companies, proposed dividend, deferred tax assets, intangible assets in the banking operations and half of the expected shortfall deduction, – the negative difference between expected losses and provisions. Subsequent to the approval of the supervisory authorities, Tier 1 capital also includes qualified forms of subordinated loans (Tier 1 capital contributions and hybrid capital loans).

The Core tier 1 capital constitutes the Tier 1 capital excluding hybrid capital loans.

**Tier 1 capital ratio** Tier 1 capital as a percentage of risk-weighted assets. The Core tier 1 ratio is calculated as Core tier 1 capital as a percentage of risk-weighted assets.

**Total allowance rate** Total allowances divided by total loans before allowances.

**Total allowances in relation to impaired loans (provisioning ratio)** Total allowances divided by impaired loans before allowances.

**Total capital ratio** Capital base as a percentage of risk-weighted assets.

**Total shareholders return (TSR)** Total shareholders return measured as growth in the value of a shareholding during the year, assuming the dividends are reinvested at the time of the payment to purchase additional shares.

## G1

## Accounting policies

**1. Basis for presentation**

Nordea's consolidated financial statements are prepared in accordance with International Financial Reporting Standards (IFRS) and interpretations of such standards by the International Financial Reporting Standards Interpretations Committee (IFRS IC, formerly IFRIC), as endorsed by the EU Commission. In addition, certain complementary rules in the Swedish Annual Accounts Act for Credit Institutions and Securities Companies (1995:1559), the recommendation RFR 1 "Supplementary Accounting Rules for Groups" and the supplementary UFR statements issued by the Swedish Financial Reporting Board as well as the accounting regulations of the Swedish Financial Supervisory Authority (FFFS 2008:25, with amendments in FFFS 2009:11 and 2011:54) have also been applied.

The disclosures, required in the standards, recommendations and legislation above, have been included in the notes, the Risk, Liquidity and Capital management section or in other parts of the "Financial statements".

On 8 February 2012 the Board of Directors approved the financial statements, subject to final approval of the Annual General Meeting on 22 March 2012.

**2. Changed accounting policies and presentation**

The accounting policies, basis for calculations and presentation are, in all material aspects, unchanged in comparison with the 2010 Annual Report, except for the categorisation of lending related commissions within "Net fee and commission income" and the recognition of repurchase and reverse repurchase agreements. These changes are further described below. Below follows also a section covering other changes in IFRSs implemented in 2011, which have not had any significant impact on Nordea.

**Categorisation of lending related commissions**

The categorisation of lending related commissions within "Net fee and commission income" (Note G4) has been changed, in order to be better aligned with the purpose for which the fees are received. The change mainly relates to syndicated transactions. The comparable figures have been restated accordingly and the impact is disclosed in the below table.

| EURm                    | 2010       |            |
|-------------------------|------------|------------|
|                         | New policy | Old policy |
| Lending                 | 397        | 323        |
| Other commission income | 217        | 291        |

**Recognition of repurchase agreements and reverse repurchase agreements**

Repurchase agreements and reverse repurchase agreements have previously been recognised on the balance sheet on trade date, but are as from 2011 recognised on settlement date. This has not had any impact on the income statement. The comparative figures have not been restated as the impact is insignificant. The impact on the balance sheet as per 31 December 2011 and the impact, that has not been restated for, as per 31 December 2010 are disclosed in the below table.

| EURm                                    | 31 Dec 2011 |            | 31 Dec 2010 |            |
|-----------------------------------------|-------------|------------|-------------|------------|
|                                         | New policy  | Old policy | New policy  | Old policy |
| <b>Reverse repurchase agreements</b>    |             |            |             |            |
| Loans to credit institutions            | 51,865      | 53,212     | 15,268      | 15,788     |
| Loans to the public                     | 337,203     | 346,273    | 313,630     | 314,211    |
| Other liabilities                       | 43,368      | 53,785     | 37,489      | 38,590     |
| <b>Repurchase agreements</b>            |             |            |             |            |
| Deposits by credit institutions         | 55,316      | 59,145     | 38,264      | 40,736     |
| Deposits and borrowings from the public | 190,092     | 194,416    | 175,245     | 176,390    |
| Other assets                            | 19,425      | 27,578     | 19,240      | 22,857     |

**Changes in IFRSs implemented 2011**

The IASB has amended IAS 24 "Related Party Disclosures" (Relationships with the state), IAS 32 "Financial Instruments: Presentation" (Rights issues) and IFRIC 14 "IAS 19 - The Limit on a Defined Benefit Asset, Minimum Funding Requirements and their Interaction" as well as published "Improvements to IFRSs 2010" and IFRIC 19 "Extinguishing Financial Liabilities with Equity Instruments". These amended and published standards and improvements are effective for Nordea as from 1 January 2011, but have not had any significant impact on 2011. The amendment of IAS 32 may affect possible future rights issues involving different currencies, whilst the amendments to IAS 24 and IFRIC 14 as well as the published "Improvements to IFRSs 2010" and IFRIC 19 are not expected to have a significant impact on subsequent periods.

**3. Changes in IFRSs not yet effective for Nordea**  
**IFRS 9 "Financial instruments" (Phase 1)**

In 2009 the IASB published a new standard on financial instruments. The standard is the first step in the replacement of IAS 39 "Financial instruments: Recognition and Measurement" and this first phase covers the classification and measurement of financial assets and liabilities. The effective date for Nordea is as from 1 January 2015, but earlier application is permitted. The EU commission has not endorsed this standard for implementation in 2011.

The tentative assessment is that there will be an impact on the financial statements as the new standard will decrease the number of measurements categories and therefore have an impact on the presentation and disclosures covering financial instruments. The new standard is, on the other hand, not expected to have a significant impact on Nordea's income statement and balance sheet as the mixed measurement model will be maintained. No significant reclassifications between fair value and amortised cost or impact on the capital adequacy are expected, but this is naturally dependent on the financial instruments in Nordea's balance sheet at transition.

Nordea has, due to the fact that the standard is not yet endorsed by the EU commission, not finalised the investigation of the impact on the financial statements in the period of initial application or in subsequent periods.

**IFRS 10 “Consolidated Financial Statements”, IFRS 11 “Joint Arrangements”, IFRS 12 “Disclosures of Interests in Other entities”, IAS 27 “Separate Financial Statements” and IAS 28 “Investments in Associates and Joint Ventures”**

The IASB has published three new standards relating to consolidation, IFRS 10, IFRS 11 and IFRS 12, as well as amended IAS 27 and IAS 28. The effective date for these standards and amendments for Nordea is as from 1 January 2013, but earlier application is permitted. The EU commission has not endorsed these standards and amendments for implementation in 2011.

The tentative assessment is that the new standards and amendments are not expected to have any significant impact on Nordea's income statement. The main potential impact is that the new definition of control can potentially lead to consolidation of funds, for instance mutual funds. A potential consolidation of mutual funds would increase assets and liabilities in the balance sheet and reduce equity to the extent the consolidated fund holds shares in Nordea (Treasury shares). The new standards furthermore include more extensive disclosure requirements which will have an impact on Nordea's disclosures covering consolidated and unconsolidated entities. It is not expected that the new standards and amendments will have a significant impact on the capital adequacy.

Nordea has, due to the fact that the standards and amendments are not yet endorsed by the EU commission, not finalised the investigation of the impact on the financial statements in the period of initial application or in subsequent periods.

**IFRS 13 “Fair Value Measurement”**

The IASB has published IFRS 13. The effective date for Nordea is as from 1 January 2013, but earlier application is permitted. The EU commission has not endorsed this standard for implementation in 2011.

The tentative assessment is that the new standard will not have a significant impact on Nordea's financial statements nor on its capital adequacy.

Nordea has, due to the fact that the standard is not yet endorsed by the EU commission, not finalised the investigation of the impact on the financial statements in the period of initial application or in subsequent periods.

**IAS 19 “Employee Benefits”**

The IASB has amended IAS 19. The effective date for Nordea is as from 1 January 2013, but earlier application is permitted. The EU commission has not endorsed this amendment for implementation in 2011.

The tentative assessment is that the amended standard will have an impact on the financial statements in the period of initial application, as well as in subsequent periods. This is mainly related to defined benefit plans. The amended IAS 19 states that actuarial gains/losses shall be recognised immediately in equity through other comprehensive income, which will lead to higher volatility in equity compared to the current corridor approach.

The amended IAS 19 furthermore states that the expected return on plan assets shall be recognised using the same interest rate as the discount rate used when measuring the pension obligation. This will lead to higher pension expenses in the income statement as Nordea currently expects a higher return than the discount rate. Any difference between the actual return and the expected return will be a part of the actuarial gains/losses recognised immediately in equity through other comprehensive income.

The unrecognised actuarial losses as per 31 December 2011 amounts to EUR 534m excluding special wage tax and before deduction of income tax. If Nordea has unrecognised actuarial losses at transition there will be a negative impact on equity. See Note G34 “Retirement benefit obligations” for more information.

The Swedish Financial Reporting Board has furthermore withdrawn UFR 4 “Accounting for special wage tax and yield tax”. It is expected that this will lead to an increase in the total obligation when the amended IAS 19 is implemented.

As the amended IAS 19 has an impact on equity it is expected that there will be an impact also on the capital adequacy.

**Other forthcoming changes in IFRSs**

IAS 1 “Presentation of Financial Statements” has been amended. The amended standard changes the presentation of other comprehensive income. The effective date for Nordea is as from 1 January 2013, but earlier application is permitted. The EU commission has not endorsed this standard for implementation in 2011.

IFRS 7 “Financial instruments: Disclosures” has been amended and will lead to additional disclosures around transferred assets. The effective date for Nordea is as from 1 January 2012, but earlier application is permitted. The EU commission has endorsed this standard for implementation in 2011.

IAS 32 “Financial Instruments: Presentation” has been amended. The change relates to offsetting of financial assets and financial liabilities. The amendment is not intended to change the criteria for offsetting, but to give additional guidance on how to apply the existing criteria. IFRS 7 “Financial instruments: Disclosures” has furthermore been amended and will lead to additional disclosures around offsetting of financial assets and financial liabilities. The effective date for Nordea is as from 1 January 2014 for amendments to IAS 32 and from 1 January 2013 for amendments to IFRS 7, but earlier application is permitted. The EU commission has not endorsed these amendments for implementation in 2011.

The IASB has furthermore amended IFRS 1 “First-time Adoption of International Financial Reporting Standards” (Hyperinflation/Fixed dates) and IAS 12 “Income taxes” (Recovery of underlying asset) and published IFRIC 20 “Stripping costs”. The effective date for Nordea is as from 1 January 2012, but earlier application is permitted. The EU commission has not endorsed the amended standards and published interpretation for implementation in 2011.

The abovementioned amended standards and interpretation not yet adopted, within the section “Other forthcoming changes in IFRSs”, are not, in the period of initial application or in subsequent periods, expected to have any significant impact on the financial statements, apart from on disclosures, nor on the capital adequacy.

**4. Critical judgements and key sources of estimation uncertainty**

The preparation of financial statements in accordance with generally accepted accounting principles requires, in some cases, the use of estimates and assumptions by management. The estimates are based on past experience and assumptions that management believes are fair and reasonable. These estimates and the judgement behind them affect the reported amounts of assets, liabilities and off-balance sheet items, as well as income and expenses in the financial statements presented. Actual outcome can later, to some extent, differ from the estimates and the assumptions made.

Certain accounting policies are considered to be particularly important to the financial position of Nordea, since they require management to make difficult, complex or subjective judgements and estimates, the majority of which relate to matters that are inherently uncertain. These critical judgements and estimates are in particular associated with:

- the fair value measurement of certain financial instruments.
- the impairment testing of:
  - goodwill and
  - loans to the public/credit institutions.
- the actuarial calculations of pension liabilities and plan assets related to employees.
- the actuarial calculations of liabilities to policyholders.
- the valuation of deferred tax assets.
- the valuation of investment properties.
- claims in civil lawsuits.

#### **Fair value measurement of certain financial instruments**

Critical judgement is exercised when determining fair value of OTC derivatives and other financial instruments that lack quoted prices or recently observed market prices in the following areas:

- The choice of valuation techniques
- The determination of when quoted prices fail to represent fair value (including the judgement of whether markets are active)
- The construction of fair value adjustments in order to incorporate relevant risk factors such as credit risk, model risk and liquidity risk
- The judgement of which market parameters that are observable

In all of these instances, decisions are based upon professional judgement in accordance with Nordea's accounting and valuation policies. In order to ensure proper governance, Nordea has a Group Valuation Committee that on an ongoing basis reviews critical judgements that are deemed to have a significant impact on fair value measurements.

See also the separate section 11 "Determination of fair value of financial instruments" and Note G43 "Assets and liabilities at fair value".

#### **Impairment testing**

##### *Goodwill*

Goodwill is tested for impairment annually, or more frequently if events or changes in circumstances indicate that it might be impaired. This consists of an analysis to assess whether the carrying amount of goodwill is fully recoverable. The determination of the recoverable amount involves establishing the value in use, measured as the present value of the cash flows expected from the cash-generating unit, to which the goodwill has been allocated.

The forecasts of future cash flows are based on Nordea's best estimates of future revenues and expenses for the cash-generating units to which goodwill has been allocated. A number of assumptions and estimates have significant impact on these calculations and include parameters like macroeconomic assumptions, market growth, business volumes, margins and cost effectiveness. Changes to any of these parameters, following changes in market conditions, competition, strategy or other, affects the forecasted cash flows. Under current market conditions such changes are not expected to lead to any significant impairment charges of goodwill, but may do so in subsequent periods.

See also the separate section 16 "Intangible assets" and Note G21 "Intangible assets".

##### *Loans to the public/credit institutions*

When testing individual loans for impairment, the most critical judgement, containing the highest uncertainty, relates to

the estimation of the most probable future cash flows generated from the customer.

When testing a group of loans collectively for impairment, the key aspect is to identify the events and/or the observable data that indicate that losses have been incurred in the group of loans. Assessing the net present value of the cash flows generated by the customers in the group contains a high degree of uncertainty when using historical data and the acquired experience when adjusting the assumptions based on historical data to reflect the current situation.

See also the separate section 14 "Loans to the public/credit institutions" and Note G14 "Loans and impairment".

#### **Actuarial calculations of pension liabilities and plan assets related to employees**

The Projected Benefit pension Obligation (PBO) for major pension plans is calculated by external actuaries using demographic assumptions based on the current population. As a basis for these calculations a number of actuarial and financial parameters are used. The most important financial parameter is the discount rate. Other parameters like assumptions about salary increases and inflation are based on the expected long-term development of these parameters. The fixing of these parameters at year-end is disclosed in Note G34 "Retirement benefit obligations".

The major part of the assets covering the pension liabilities is invested in liquid assets and valued at quoted prices at year-end. The expected return on plan assets is fixed taking into account the asset composition and based on long-term expectations on the return on the different asset classes. The expected return is also disclosed in Note G34 "Retirement benefit obligations".

See also the separate section 22 "Employee benefits" and Note G34 "Retirement benefit obligations".

#### **Actuarial calculations for liabilities to policyholders**

The liabilities to policyholders consist of long-term obligations with some insurance contracts having long durations. A valuation of these liabilities includes estimations and assumptions, both financial and actuarial. One of the important financial assumptions is the interest rate used for discounting future cash flows. Other important actuarial assumptions are mortality and disability assumptions, which affect the size and timing of the future cash flows. The financial and actuarial assumptions are, to a large extent, stipulated in local legislation and therefore not under Nordea's discretion. Also assumptions about future administrative and tax expenses have an impact on the calculation of policyholder liabilities.

See also the separate section 19 "Liabilities to policyholders" and Note G29 "Liabilities to policyholders".

#### **Valuation of deferred tax assets**

The valuation of deferred tax assets is influenced by management's assessment of Nordea's future profitability. This assessment is updated and reviewed at each balance sheet date, and is, if necessary, revised to reflect the current situation.

See also the separate section 20 "Taxes" and Note G11 "Taxes".

#### **Valuation of investment properties**

Investment properties are measured at fair value as described in section 18 "Investment property". As there normally are no active markets for investment properties, the fair values are estimated based on discounted cash flow models. These models are based on assumptions on future rents, vacancy levels, operating and maintenance costs, yield requirements and interest rates.

See also the separate section 18 “Investment property” and Note G24 “Investment property”.

### Claims in civil lawsuits

Within the framework of the normal business operations, Nordea faces a number of claims in civil lawsuits and disputes, most of which involve relatively limited amounts. Presently none of these disputes are considered likely to have any significant adverse effect on Nordea or its financial position. See also Note G33 “Provisions” and Note G38 “Contingent liabilities”.

## 5. Principles of consolidation

### Consolidated entities

The consolidated financial statements include the accounts of the parent company Nordea Bank AB (publ), and those entities that the parent company controls. Control is generally achieved when the parent company owns, directly or indirectly through group undertakings, more than 50 per cent of the voting rights or otherwise has the power to govern the financial and operating policies of the entity.

All Group undertakings are consolidated using the purchase method, except for the forming of Nordea in 1997–98 when the holding in Nordea Bank Finland Plc was consolidated using the pooling method. Under the purchase method, the acquisition is regarded as a transaction whereby the parent company indirectly acquires the subsidiary’s assets and assumes its liabilities and contingent liabilities. The Group’s acquisition cost is established in a purchase price allocation analysis. In such analysis, the cost of the business combination is the aggregate of the fair values, at the date of exchange, of assets given, liabilities incurred or assumed and equity instruments issued by the acquirer, in exchange for the identifiable net assets acquired. Costs directly attributable to the business combination are expensed. When the cost of the business combination exceeds the net fair value of the identifiable assets, liabilities and contingent liabilities, the excess is reported as goodwill. If the difference is negative, such difference is recognised immediately in the income statement.

Intra-group transactions and balances between the consolidated group undertakings are eliminated.

The Group undertakings are included in the consolidated accounts as from the date on which control is transferred to Nordea and are no longer consolidated as from the date on which control ceases.

Equity and net income attributable to non-controlling interests are separately disclosed in the balance sheet, income statement and statement of comprehensive income.

In the consolidation process the reporting from the subsidiaries is adjusted to ensure consistency with the IFRS principles applied by Nordea.

### Investments in associated undertakings

The equity method of accounting is used for associated undertakings where the share of voting rights is between 20 and 50 per cent and/or where Nordea has significant influence. Investments within Nordea’s investment activities, which are classified as a venture capital organisation within Nordea, are measured at fair value in accordance with the rules set out in IAS 28 and IAS 39. Further information on the equity method is disclosed in section 6 “Recognition of operating income and impairment”.

Profits from companies accounted for under the equity method are reported post-taxes in the income statement. Consequently, the tax expense related to these profits is not included in the income tax expense for Nordea.

Internal transactions, in the income statement, between Nordea and its associated companies are not eliminated.

Nordea does not have any transactions including sales of assets with associated companies.

### Special Purpose Entities (SPE)

In accordance with IFRS Nordea does not consolidate SPEs’ assets and liabilities beyond its control. In order to determine whether Nordea controls a SPE or not, Nordea has to make judgements about risks and rewards and assess the ability to make operational decisions for the SPE in question.

When assessing whether Nordea shall consolidate a SPE, a range of factors are evaluated. These factors include whether the activities of the SPE are being in substance conducted on Nordea’s behalf or if Nordea has in substance the decision making powers, the rights to obtain the majority of the benefits or the majority of the residual- or ownership risks. Nordea consolidates all SPEs, where Nordea has retained the majority of the risks and rewards. For the SPEs that are not consolidated the rationale is that Nordea does not have any significant risks or rewards on these assets and liabilities.

Nordea has created a number of SPEs to allow clients to invest in assets invested in by the SPEs. Some SPEs invest in tradable financial instruments, such as shares and bonds (mutual funds). Other SPEs invest in structured credit products or acquire assets from customers of Nordea. Nordea is generally the investment manager and has sole discretion about investments and other administrative decisions. Typically, Nordea will receive service and commission fees in connection to the creation of the SPEs, or because it acts as investment manager, custodian or in some other function. This in itself does not constitute a beneficial interest triggering consolidation. In some SPEs Nordea has also supplied substantial parts of the funding in the form of fund units, loans or credit commitments. In these SPEs Nordea has a beneficial interest and retains the majority of the risks and rewards, which is why these SPEs are consolidated. Note P21 “Investments in group undertakings” lists the major subsidiaries in the Nordea Group, including consolidated SPEs.

### Currency translation of foreign entities

The consolidated financial statements are prepared in euro (EUR), the presentation currency of the parent company Nordea Bank AB (publ). The current method is used when translating the financial statements of foreign entities into EUR from their functional currency. The assets and liabilities of foreign entities have been translated at the closing rates, while items in the income statements and statements of comprehensive income are translated at the average exchange rate for the year. Translation differences are accounted for in other comprehensive income and are accumulated in the translation reserve in equity.

Goodwill and fair value adjustments arising from the acquisition of group undertakings are treated as items in the same functional currency as the cash generating unit to which they belong and are also translated at the closing rate.

Information on the most important exchange rates is disclosed in the separate section 27 “Exchange rates”.

## 6. Recognition of operating income and impairment

### Net interest income

Interest income and expense are calculated and recognised based on the effective interest rate method or, if considered appropriate, based on a method that results in an interest income or interest expense that is a reasonable approximation of using the effective interest rate method as basis for the calculation.

Interest income and interest expense related to all balance sheet items in Markets and Nordea Life & Pensions are recognised in the income statement on the line “Net result from

items at fair value". Interest income and expense connected to internal placements by and internal funding of Markets are replaced with the related Group external interest income and interest expense and recognised on the line "Net result from items at fair value".

Interest on derivatives used for hedging is also recognised in "Net interest income", as well as fees that are considered to be an integral part of the effective interest rate of a financial instrument.

#### Net fee and commission income

Nordea earns commission income from different services provided to its customers. The recognition of commission income depends on the purpose for which the fees are received. Fees are either recognised as revenue when services are provided or in connection to the execution of a significant act. Fees received in connection to performed services are recognised as income in the period these services are provided. A loan syndication fee received as payment for arranging a loan, as well as other fees received as payments for certain acts, are recognised as revenue when the act has been completed, i.e. when the syndication has been finalised.

Commission expenses are transaction based and recognised in the period when the services are received.

Income from issued financial guarantees and expenses from bought financial guarantees, including fees paid to state guarantees, are amortised over the duration of the instruments and classified as "Fee and commission income" and "Fee and commission expense" respectively.

#### Net result from items at fair value

Realised and unrealised gains and losses on financial instruments measured at fair value through profit or loss are recognised in the item "Net result from items at fair value".

Realised and unrealised gains and losses derive from:

- Shares/participations and other share-related instruments
- Interest-bearing securities and other interest-related instruments
- Other financial instruments, which contain credit derivatives as well as commodity instruments/derivatives
- Foreign exchange gains/losses
- Investment properties, which include realised and unrealised income, for instance revaluation gains and losses. This line also includes realised results from disposals as well as the running property yield stemming from the holding of investment properties.

Interest income and interest expense related to all balance sheet items in Markets and Nordea Life & Pensions, including the funding of these operations, are recognised in "Net result from items at fair value".

Also the ineffective portion of cash flow hedges and net investment hedges as well as recycled gains and losses on financial instruments classified into the category Available for sale are recognised in "Net result from items at fair value".

This item also includes realised gains and losses from financial instruments measured at amortised cost, such as interest compensation received and realised gains/losses on buy-backs of issued own debt.

"Net result from items at fair value" includes also losses from counterparty risk on instruments classified into the category Financial assets at fair value through profit or loss as well as impairment on instruments classified into the category Available for sale. Impairment losses from instruments within other categories are recognised in the items "Net loan losses" or "Impairment of securities held as financial non-current assets" (see also the sub-sections "Net loan losses" and "Impairment of securities held as financial non-current assets" below).

Dividends received are recognised in the income statement as "Net result from items at fair value" and classified as "Shares/participations and other share-related instruments" in the note. Income is recognised in the period in which the right to receive payment is established.

The income recognition and descriptions of the lines relating to life insurance are described in section 7 "Income recognition life insurance" below.

#### Profit from companies accounted for under the equity method

The profit from companies accounted for under the equity method is defined as the post-acquisition change in Nordea's share of net assets in the associated companies. Nordea's share of items accounted for in other comprehensive income in the associated companies is accounted for in other comprehensive income in Nordea. Profits from companies accounted for under the equity method are, as stated in section 5 "Principles of consolidation", reported in the income statement post-taxes. Consequently the tax expense related to these profits is excluded from the income tax expense for Nordea.

Fair values are, at acquisition, allocated to the associated company's identifiable assets, liabilities and contingent liabilities. Any difference between Nordea's share of the fair values of the acquired identifiable net assets and the purchase price is goodwill or negative goodwill. Goodwill is included in the carrying amount of the associated company. Subsequently the investment in the associated company increases/decreases with Nordea's share of the post-acquisition change in net assets in the associated company and decreases through received dividends and impairment. An impairment charge can be reversed in a subsequent period.

The change in Nordea's share of the net assets is generally based on monthly reporting from the associated companies. For some associated companies not individually significant the change in Nordea's share of the net assets is based on the external reporting of the associated companies and affects the financial statements of Nordea in the period in which the information is available. The reporting from the associated companies is, if applicable, adjusted to comply with Nordea's accounting policies.

#### Other operating income

Net gains from divestments of shares in subsidiaries and associated companies and net gains on sale of tangible assets as well as other operating income, not related to any other income line, are generally recognised when it is probable that the benefits associated with the transaction will flow to Nordea and if the significant risks and rewards have been transferred to the buyer (generally when the transactions are finalised).

#### Net loan losses

Impairment losses from financial assets classified into the category Loans and receivables (see section 13 "Financial instruments"), in the items "Loans to credit institutions" and "Loans to the public" in the balance sheet, are reported as "Net loan losses" together with losses from financial guarantees (including state guarantees in Denmark). Losses are reported net of any collateral and other credit enhancements. Nordea's accounting policies for the calculation of impairment losses on loans can be found in section 14 "Loans to the public/credit institutions".

Counterparty losses on instruments classified into the category Financial assets at fair value through profit or loss, including credit derivatives, as well as impairment on financial assets classified into the category Available for sale are reported under "Net result from items at fair value".

### Impairment of securities held as financial non-current assets

Impairment on investments in interest-bearing securities, classified into the categories Loans and receivables or Held to maturity, and on investments in associated companies are classified as “Impairment of securities held as financial non-current assets” in the income statement. The policies covering impairment of financial assets classified into the categories Loans and receivables and Held to maturity are disclosed in section 13 “Financial instruments” and section 14 “Loans to the public/credit institutions”.

Investments in associated companies are assessed for impairment annually. If observable indicators (loss events) indicate that an associated company is impaired, an impairment test is performed to assess whether there is objective evidence of impairment. The carrying amount of the investment in the associate is compared with the recoverable amount (higher of value in use and fair value less cost to sell) and the carrying amount is written down to the recoverable amount if required.

Impairment losses are reversed if the recoverable amount increases. The carrying amount is then increased to the recoverable amount, but cannot exceed the carrying amount that would have been determined had no impairment loss been recognised.

### 7. Income recognition life insurance

Premiums received, and repayments to policyholders, related to the saving part of the life insurance contracts are reported as increases or decreases of liabilities to policyholders. See further information in section 19 “Liabilities to policyholders”.

The total income from life insurance mainly consists of the following components:

- Cost result
- Insurance risk result
- Risk and performance margin
- Investment return on additional capital in life insurance

The result from these components is, except for the cost result and the risk and performance margin relating to Unit Linked and Investment contracts, included in “Net result from items at fair value”.

The cost result is the result of expense loading from policyholders and is included in the item “Fee and commission income”, together with the risk and performance margin relating to Unit Linked and Investment contracts. The related expenses are included in the items “Fee and commission expense” and “Operating expenses”. The policyholder's part of a positive or negative cost result (profit sharing) is included in the note line “Change in technical provisions, Life” within Note G5 “Net result from items at fair value”.

The insurance risk result consists of income from individual risk products and from unbundled life insurance contracts as well as Health and personal accident insurance. The risk premiums are amortised over the coverage period as the provisions are reduced when insurance risk is released. A large part of the unbundled risk result from traditional life insurance is subject to profit sharing, which means that the policyholders receive a part of a net income or a net deficit. The risk income and the risk expenses are presented gross on the lines “Insurance risk income, Life” and “Insurance risk expense, Life” in Note G5 “Net result from items at fair value”. The policyholder's part of the result is included in the line “Change in technical provisions, Life” in the note.

Gains and losses derived from investments in Nordea Life & Pensions are split on the relevant lines in Note G5 “Net result from items at fair value” as for any other investments in Nordea. The lines include investment return on assets held to

cover liabilities to policyholders and return on the additional capital allocated to Nordea Life & Pensions (Shareholders capital in the Nordea Life & Pensions group).

The note line “Change in technical provisions, Life” in Note G5 “Net result from items at fair value” includes:

- Investment returns on assets held to cover liabilities to policyholders (including liabilities from traditional life insurance, unit linked insurance and investment contracts), individually transferred to policyholders' accounts according to the contracts.
- Additional bonus (discretionary participation feature) to policyholders concerning traditional life insurance contracts or any other transfers to the policyholders to cover a periodical deficit between the investment result and any agreed minimum benefit to the policyholders.
- Risk and performance margin regarding traditional life insurance products according to local allocation rules in each Nordea Life & Pensions unit and according to contracts with policyholders. The recognition of a risk and performance margin in the income statement is mainly conditional on a positive result for traditional life insurance contracts. Risk and performance margins not possible to recognise in the current period due to poor investment results, can, in some countries, partly or wholly be deferred to years with higher returns.
- The policyholders' part of the cost- and risk result regarding traditional life insurance contracts or unit linked contracts.

The note line “Change in collective bonus potential, Life” in Note G5 “Net result from items at fair value” relates only to traditional life insurance contracts. The line includes policyholders' share of investment returns not yet individualised. The line includes also additional bonus (discretionary participation feature) and amounts needed to cover a periodical deficit between the investment result and any minimum benefits to the policyholders.

### 8. Recognition and derecognition of financial instruments in the balance sheet

Derivative instruments, quoted securities and foreign exchange spot transactions are recognised on and derecognised (reclassified to the items “Other assets” or “Other liabilities” in the balance sheet between trade date and settlement date) from the balance sheet on the trade date. Other financial instruments are recognised on the balance sheet on settlement date.

Financial assets, other than those for which trade date accounting is applied, are derecognised from the balance sheet when the contractual rights to the cash flows from the financial asset expire or are transferred to another party. The rights to the cash flows normally expire or are transferred when the counterpart has performed by e.g. repaying a loan to Nordea, i.e. on settlement date.

In some cases, Nordea enters into transactions where it transfers assets that are recognised on the balance sheet, but retains either all or a portion of risks and rewards from the transferred assets. If all or substantially all risks and rewards are retained, the transferred assets are not derecognised from the balance sheet. If Nordea's counterpart can sell or repledge the transferred assets, the assets are reclassified to the item “Financial instruments pledged as collateral” in the balance sheet. Transfers of assets with retention of all or substantially all risks and rewards include e.g. security lending agreements and repurchase agreements.

Financial liabilities are derecognised from the balance sheet when the liability is extinguished. Normally this occurs when Nordea performs, for example when Nordea repays a deposit to the counterpart, i.e. on settlement date. Financial

liabilities under trade date accounting are generally reclassified to "Other liabilities" in the balance sheet on trade date.

For further information, see sections "Securities borrowing and lending agreements" and "Repurchase and reverse repurchase agreements" within 13 "Financial instruments", as well as Note G44 "Obtained collaterals which are permitted to be sold or repledged".

### 9. Translation of assets and liabilities denominated in foreign currencies

The functional currency of each entity is decided based upon the primary economic environment in which the entity operates. The parent company Nordea Bank AB (publ) uses two functional currencies, SEK and EUR, for reporting in consolidated accounts, based on the different activities in the underlying business.

Foreign currency is defined as any currency other than the functional currency of the entity. Foreign currency transactions are recorded at the exchange rate on the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated at the exchange rate on the balance sheet date.

Exchange differences arising on the settlement of transactions at rates different from those at the date of the transaction, and unrealised translation differences on unsettled foreign currency monetary assets and liabilities, are recognised in the income statement in the item "Net result from items at fair value".

Translation differences on financial instruments that are designated hedging instruments in a hedge of a net investment in a group undertaking are recognised in other comprehensive income, to the extent the hedge is effective. This is performed in order to offset the translation differences affecting other comprehensive income when consolidating the group undertaking into Nordea. Any ineffectiveness is recognised in the income statement in the item "Net result from items at fair value".

### 10. Hedge accounting

IAS 39 includes principles and rules concerning accounting for hedging instruments and the underlying hedged item, so-called hedge accounting. Nordea applies the EU carve out version of IAS 39 for portfolio hedges of both assets and liabilities. The EU carve out macro hedging enables a group of derivatives (or proportions thereof) to be viewed in combination and designated as the hedging instrument and removes some of the limitations in fair value hedge accounting relating to hedging core deposits and under-hedging strategies.

The hedge accounting policy within Nordea has been developed to fulfil the requirements set out in IAS 39. Nordea uses hedge accounting in order to have a symmetrical accounting treatment of the changes in fair value of the hedged item and changes in fair value of the hedging instruments as well as to hedge the exposure to variability in future cash flows and the exposure to net investments in foreign operations. The overall purpose is to have a true and fair presentation of Nordea's economical hedges in the financial statements. The overall operational responsibility to hedge positions and for hedge accounting lies within Group Treasury.

There are three forms of hedge accounting:

- Fair value hedge accounting
- Cash flow hedge accounting
- Hedges of net investments

#### Fair value hedge accounting

Fair value hedge accounting is used when derivatives are hedging changes in fair value of a recognised asset or liability attributable to a specific risk. The risk of changes in fair value

of assets and liabilities in Nordea's financial statements originates mainly from loans, securities and deposits with a fixed interest rate, causing interest rate risk. Changes in fair value from derivatives as well as changes in fair value of the hedged item attributable to the risks being hedged will be recognised separately in the income statement in the item "Net result from items at fair value". Given an effective hedge, the two changes in fair value will more or less balance, meaning the net result will be close to zero. The changes in fair value of the hedged item attributable to the risks hedged with the derivative instrument are reflected in an adjustment to the carrying amount of the hedged item, which is also recognised in the income statement. The fair value change of the hedged item in a portfolio hedge of interest rate risks is reported separately from the portfolio in the item "Fair value changes of the hedged items in portfolio hedge of interest rate risk" in the balance sheet.

Fair value hedge accounting in Nordea is performed mainly on a portfolio basis. Any ineffectiveness is recognised in the income statement under the item "Net result from items at fair value".

#### Hedged items

A hedged item in a fair value hedge can be a recognised single asset or liability, an unrecognised firm commitment, or a portion thereof. The hedged item can also be a group of assets, liabilities or firm commitments with similar risk characteristics. Hedged items in Nordea consist of both individual assets or liabilities and portfolios of assets and/or liabilities.

#### Hedging instruments

The hedging instruments used in Nordea are predominantly interest rate swaps and cross currency interest rate swaps, which are always held at fair value. Cash instruments are only used in a few transactions as hedging instruments when hedging currency risk.

#### Cash flow hedge accounting

Cash flow hedge accounting can be used for the hedging of exposure to variations in future interest payments on instruments with variable interest rates and for the hedging of currency exposures. The portion of the gain or loss on the hedging instrument, that is determined to be an effective hedge, is recognised directly in other comprehensive income and accumulated in the fair value reserve (related to cash flow hedges) in equity. The ineffective portion of the gain or loss on the hedging instrument is recycled to the item "Net result from items at fair value" in the income statement.

Gains or losses on hedging instruments recognised in the fair value reserve (related to cash flow hedges) in equity through other comprehensive income are recycled and recognised in the income statement in the same period as the cash flow, normally the interest income or interest expense from the hedged asset or liability.

#### Hedged items

A hedged item in a cash flow hedge can be a recognised asset or liability or a highly probable forecast transaction. Nordea uses cash flow hedges when hedging currency risk in future payments of interest and principal in foreign currency.

#### Hedging instruments

The hedging instruments used in Nordea are predominantly cross currency interest rate swaps, which are always held at fair value, where the currency component is designated as a cash flow hedge of currency risk and the interest component as a fair value hedge of interest rate risk.

### Hedges of net investments

See separate section 9 "Translation of assets and liabilities denominated in foreign currencies".

### Hedge effectiveness

The application of hedge accounting requires the hedge to be highly effective. A hedge is regarded as highly effective if at inception and throughout its life it can be expected that changes in fair value of the hedged item as regards the hedged risk can be essentially offset by changes in fair value of the hedging instrument. The result should be within a range of 80–125 per cent. When assessing hedge effectiveness retrospectively Nordea measures the fair value of the hedging instruments and compares the change in fair value of the hedging instrument to the change in fair value of the hedged item. The effectiveness measurement is made on a cumulative basis.

If the hedge relationship does not fulfil the requirements, hedge accounting will be terminated. The change in the unrealised value of the derivatives will, prospectively from the last time it was last proven effective, be accounted for in the income statement. For fair value hedges, the change in the fair value on the hedged item, up to the point when the hedge relationship is terminated, is amortised to the income statement on a straight-line basis over the remaining maturity of the hedged item. In cash flow hedges, the cumulative gain or loss on the hedging instrument that has been recognised in the fair value reserve (related to cash flow hedges) in equity through other comprehensive income from the period when the hedge was effective is reclassified from equity to "Net result from items at fair value" in the income statement if the hedged item is derecognised, cancelled or the expected transaction no longer is expected to occur. If the expected transaction no longer is highly probable, but is still expected to occur, the cumulative gain or loss on the hedging instrument that has been recognised in other comprehensive income from the period when the hedge was effective remains in other comprehensive income until the transaction occurs or is no longer expected to occur.

### 11. Determination of fair value of financial instruments

Financial assets and liabilities classified into the categories Financial assets/liabilities at fair value through profit or loss (including derivative instruments) are recorded at fair value on the balance sheet with changes in fair value recognised in the income statement in the item "Net result from items at fair value".

Fair value is defined as the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction.

The existence of published price quotations in an active market is the best evidence of fair value and when they exist they are used to measure financial assets and financial liabilities. Nordea is predominantly using published price quotations to establish fair value for items disclosed under the following balance sheet items:

- Treasury bills
- Interest-bearing securities
- Shares
- Derivatives (listed derivatives)
- Debt securities in issue (issued mortgage bonds in Nordea Kredit Realkreditatieselskab)

If quoted prices for a financial instrument fail to represent actual and regularly occurring market transactions or if quoted prices are not available, fair value is established by using an appropriate valuation technique. Valuation techniques can range from simple discounted cash flow analysis to complex option pricing models. Valuation models are

designed to apply observable market prices and rates as input whenever possible, but can also make use of unobservable model parameters. Nordea is predominantly using valuation techniques to establish fair value for items disclosed under the following balance sheet items:

- Treasury bills (when quoted prices in an active market are not available)
- Loans to the public (mortgage loans in the Danish subsidiary Nordea Kredit Realkreditatieselskab)
- Interest-bearing securities (when quoted prices in an active market are not available)
- Shares (when quoted prices in an active market are not available)
- Derivatives (OTC-derivatives)

Fair value is calculated as the theoretical net present value of the individual contracts, based on independently sourced market parameters and assuming no risks and uncertainties. This calculation is supplemented by a portfolio adjustment. The portfolio adjustment covers uncertainties associated with the valuation techniques, model assumptions and unobservable parameters as well as the portfolio's counterparty credit risk and liquidity risk. An important part of the portfolio adjustment serves to adjust the net open market risk exposures from mid-prices to ask or bid prices (depending on the net position). For different risk categories, exposures are aggregated and netted according to internal guidelines and aggregated market price information on bid-ask spreads are applied in the calculation. Spreads are updated on a regular basis.

The portfolio adjustment for uncertainties associated with model assumptions comprises two components (The calculation principles are defined as part of the internal approval process for valuation models):

- Benchmarking of the model output (market values) against market information or against results from alternative models, where available
- Sensitivity calculations where unobservable parameters are changed to other reasonable values

The portfolio adjustment for counterparty risk in OTC-derivatives is based on the current exposure towards each counterparty, the estimated potential future exposure as well as an estimate of the cost of hedging the counterparty risk. This cost of hedging is either based directly on market prices (where available) or on a theoretical calculation based on the internal credit rating of the counterparty.

For financial instruments, where fair value is estimated by a valuation technique, it is investigated whether the variables used in the valuation model are predominantly based on data from observable markets. By data from observable markets, Nordea considers data that can be collected from generally available external sources and where this data is judged to represent realistic market prices. If non-observable data has a significant impact on the valuation, the instrument cannot be recognised initially at the fair value estimated by the valuation technique and any upfront gains are thereby deferred and amortised through the income statement over the contractual life of the instrument. The deferred upfront gains are subsequently released to income if the non-observable data becomes observable.

Note G43 "Assets and liabilities at fair value" provides a breakdown of fair values of financial instruments measured on the basis of:

- quoted prices in active markets for the same instrument (level 1),
- valuation techniques using observable data (level 2), and
- valuation techniques using non-observable data (level 3).

The valuation models applied by Nordea are consistent with accepted economic methodologies for pricing financial instruments and incorporate the factors that market participants consider when setting a price.

New valuation models are subject to approval by Group Risk Management and all models are reviewed on a regular basis.

For further information, see Note G43 "Assets and liabilities at fair value".

## 12. Cash and cash equivalents

Cash and cash equivalents consist of cash and balances with central banks where the following conditions are fulfilled:

- The central bank is domiciled in a country where Nordea is operating under a banking licence
- The balance is readily available at any time

Cash and cash equivalents are financial instruments classified into the category Loans and receivables, see section 13 "Financial instruments".

Loans to credit institutions payable on demand are also recognised as "Cash and cash equivalents" in the cash flow statement.

## 13. Financial instruments

### Classification of financial instruments

Each financial instrument has been classified into one of the following categories:

#### *Financial assets:*

- Financial assets at fair value through profit or loss:
  - Held for trading
  - Designated at fair value through profit or loss (Fair Value Option)
- Loans and receivables
- Held to maturity
- Available for sale

#### *Financial liabilities:*

- Financial liabilities at fair value through profit or loss:
  - Held for trading
  - Designated at fair value through profit or loss (Fair Value Option)
- Other financial liabilities

All financial assets and liabilities are initially measured at fair value. The classification of financial instruments into different categories forms the basis for how each instrument is subsequently measured in the balance sheet and how changes in its value are recognised. In Note G42 "Classification of financial instruments" the classification of the financial instruments in Nordea's balance sheet into different categories is presented.

#### *Financial assets and financial liabilities at fair value through profit or loss*

Financial assets and financial liabilities at fair value through profit or loss are measured at fair value, excluding transaction costs. All changes in fair values are recognised directly in the income statement in the item "Net result from items at fair value".

The category consists of two sub-categories; Held for trading and Designated at fair value through profit or loss (Fair value option).

The sub-category Held for trading mainly contains derivative instruments that are held for trading purposes, interest-bearing securities and shares within Markets and Treasury. It also contains trading liabilities such as short-selling positions.

The major parts of the financial assets/liabilities classified into the category Designated at fair value through profit or loss are mortgage loans and related issued bonds in the Danish subsidiary Nordea Kredit Realkreditaktieselskab and interest-bearing securities, shares and investment contracts in Nordea Life & Pensions. Assets and liabilities in Nordea Kredit Realkreditaktieselskab are classified into the category Designated at fair value through profit or loss to eliminate or significantly reduce an accounting mismatch. Interest-bearing securities, shares and investment contracts in Nordea Life & Pensions also belong to this category, as a consequence of that these assets and liabilities are managed on a fair value basis.

Nordea also applies the Fair value option on certain financial assets and financial liabilities related to Markets. The classification stems from that Markets is managing and measuring all its financial assets and liabilities to fair value. Consequently, all financial assets and financial liabilities in Markets are classified into the categories Financial assets/Financial liabilities at fair value through profit or loss.

#### *Loans and receivables*

Loans and receivables are non-derivative financial assets, with fixed or determinable payments, that are not quoted in an active market. These assets and their impairment are further described in the separate section 14 "Loans to the public/credit institutions".

#### *Held to maturity*

Financial assets that Nordea has chosen to classify into the category Held-to-maturity are non-derivative financial assets with fixed or determinable payments and fixed maturity that Nordea has the positive intent and ability to hold to maturity. Financial assets classified into the category Held-to-maturity are initially recognised in the balance sheet at the acquisition price, including transaction costs. Subsequent to initial recognition, the instruments within this category are measured at amortised cost. In an amortised cost measurement, the difference between acquisition cost and redemption value is amortised in the income statement over the remaining term using the effective interest rate method.

If more than an insignificant amount of the Held to maturity portfolio is sold or transferred the Held to maturity category is tainted, except for if the sale or transfer either occur close to maturity, after substantially all of the original principal is already collected, or due to an isolated non-recurring event beyond the control of Nordea.

Nordea assesses at each reporting date whether there is any objective evidence that the asset is impaired. If there is such evidence, an impairment loss is recorded. The loss is calculated as the difference between the carrying amount and the present value of estimated future cash flows and is recognised as "Impairment of securities held as financial non-current assets" in the income statement. See section 14 "Loans to the public/credit institutions" for more information on the identification and measurement of objective evidence of impairment, which is applicable also for interest-bearing securities classified into the category Held to maturity.

#### *Available for sale*

Financial instruments classified into the category Available for sale are measured at fair value. Changes in fair values, except for interest, foreign exchange effects and impairment losses, are recognised in the fair value reserve in equity through other comprehensive income. Interest is recognised in the item "Interest income" and foreign exchange effects and impairment losses in the item "Net result from items at fair value" in the income statement.

When an instrument classified into the category Available for sale is disposed of, the fair value changes that previously have been accumulated in the fair value reserve (related to Available for sale investments) in other comprehensive income are removed from equity and recognised in the income statement in the item "Net result from items at fair value".

Financial assets classified into the category Available for sale are assessed at least annually in order to determine any need for impairment losses. If there is objective evidence of impairment, the accumulated loss that has been recognised in other comprehensive income is removed from equity and recognised as "Net result from items at fair value" in the income statement. The amount of the accumulated loss that is recycled from equity is the difference between the asset's acquisition cost and current fair value. For equity investments a prolonged and significant decline in the fair value, compared to the acquisition cost, is considered to be objective evidence of impairment. Objective evidence of impairment for a debt instrument is rather connected to a loss event, such as an issuer's financial difficulty.

#### *Other financial liabilities*

Financial liabilities, other than those classified into the category Financial liabilities at fair value through profit or loss, are measured at amortised cost. Interest from Other financial liabilities is recognised in the item "Interest expense" in the income statement.

#### **Hybrid (combined) financial instruments**

Hybrid (combined) financial instruments are contracts containing a host contract and an embedded derivative instrument. Such combinations arise predominantly from the issuance of structured debt instruments, such as issued index-linked bonds.

Index-linked bonds issued by Group Treasury are considered to be part of the funding activities. The zero coupon bond, is measured at amortised cost. The embedded derivatives in those instruments are separated from the host contract and accounted for as stand-alone derivatives at fair value, if the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host contract, and the embedded derivative meets the definition of a derivative instrument. Changes in fair values, of the embedded derivatives, are recognised in the income statement in the item "Net result from items at fair value".

Index-linked bonds issued by Markets as part of the trading portfolio are classified into the category Held for trading, and the entire combined instrument, host contract together with the embedded derivative, is measured at fair value through profit or loss. Changes in fair values are recognised in the income statement in the item "Net result from items at fair value".

#### **Securities borrowing and lending agreements**

Generally, securities borrowing and securities lending transactions are entered into on a collateralised basis. Unless the risks and rewards of ownership are transferred, the securities are not recognised on or derecognised from the balance sheet. In the cases where the counterpart is entitled to resell or repledge the securities, the securities are reclassified to the balance sheet item "Financial instruments pledged as collateral".

Securities in securities lending transactions are also disclosed in the item "Assets pledged as security for own liabilities".

Cash collateral advanced (securities borrowing) to the counterparts is recognised on the balance sheet as "Loans to credit institutions" or as "Loans to the public". Cash collateral received (securities lending) from the counterparts is recognised on the balance sheet as "Deposits by credit institutions" or as "Deposits and borrowings from the public".

#### **Repurchase and reverse repurchase agreements**

Securities delivered under repurchase agreements and securities received under reverse repurchase agreements are not derecognised from or recognised on the balance sheet. In the cases where the counterpart has the right to resell or repledge the securities, the securities are reclassified to the balance sheet line "Financial instruments pledged as collateral".

Securities delivered under repurchase agreements are also disclosed in the item "Assets pledged as security for own liabilities".

Cash received under repurchase agreements is recognised on the balance sheet as "Deposits by credit institutions" or as "Deposits and borrowings from the public". Cash delivered under reverse repurchase agreements is recognised on the balance sheet as "Loans to credit institutions" or as "Loans to the public".

Additionally, the sale of securities received in reverse repurchase agreements trigger the recognition of a trading liability (short sale).

#### **Derivatives**

All derivatives are recognised on the balance sheet and measured at fair value. Derivatives with total positive fair values, including any accrued interest, are recognised as assets in the item "Derivatives" on the asset side. Derivatives with total negative fair values, including any accrued interest, are recognised as liabilities in the item "Derivatives" on the liability side.

Realised and unrealised gains and losses from derivatives are recognised in the income statement in the item "Net result from items at fair value".

#### **14. Loans to the public/credit institutions**

Financial instruments classified as "Loans to the public/credit institutions" in the balance sheet and into the category Loans and receivables are measured at amortised cost (see also the separate section 8 "Recognition and derecognition of financial instruments in the balance sheet" as well as Note G42 "Classification of financial instruments").

Nordea monitors loans as described in the separate section on Risk, Liquidity and Capital management. Loans attached to individual customers or groups of customers are identified as impaired if the impairment tests indicate an objective evidence of impairment.

Also interest-bearing securities classified into the categories Loans and receivables and Held to maturity are held at amortised cost and the description below is valid also for the identification and measurement of impairment on these assets. Possible impairment losses on interest-bearing securities classified into the categories Loans and receivables and Held to maturity are recognised as "Impairment of securities held as non-current financial assets" in the income statement.

#### **Impairment test of individually assessed loans**

Nordea tests significant loans for impairment on an individual basis. The purpose of the impairment tests is to find out if the loans have become impaired. As a first step in the identification process for impaired loans, Nordea monitors whether there are indicators of impairment (loss event) and whether these loss events represent objective evidence of impairment. More information on the identification of loss events can be found in the Risk, Liquidity and Capital management section.

In the process to conclude whether there is objective evidence of impairment, an assessment is performed to estimate the most probable future cash flows generated by the customer. These cash flows are then discounted by the effective interest rate giving the net present value. Collaterals received to mitigate the credit risk will be assessed at fair value. If the

carrying amount of the loan is higher than the net present value of the estimated future cash flows, including the fair value of the collaterals, the loan is impaired.

Loans that are not individually impaired will be transferred to a group of loans with similar risk characteristics for a collective impairment test.

#### **Impairment test of collectively assessed loans**

All loans not impaired on an individual basis are collectively assessed for impairment, including individually insignificant loans. This means that significant loans not impaired on an individual level and insignificant loans that have not been tested on an individual level are collectively tested for impairment. The loans are grouped on the basis of similar credit risk characteristics that are indicative of the debtors' ability to pay all amounts due according to the contractual terms. Nordea monitors its portfolio through rating migrations, the credit decision and annual review process supplemented by quarterly risk reviews. Through these processes Nordea identifies loss events indicating incurred losses in a group. A loss event is an event resulting in a deterioration of the expected future cash flows. Only loss events incurred up to the reporting date are included when performing the assessment of the group.

The objective for the group assessment process is to evaluate if there is a need to make a provision due to the fact that a loss event has occurred, which has not yet been identified on an individual basis. This period between the date when the loss event occurred and the date when it is identified on an individual basis is called "Emergence period". The impairment remains related to the group of loans until the losses have been identified on an individual basis. The identification of the loss is made through a default of the engagement or by other indicators.

For corporate customers and bank counterparts, Nordea uses the existing rating system as a basis when assessing the credit risk. Nordea uses historical data on probability of default to estimate the risk for a default in a rating class. These loans are rated and grouped mostly based on type of industry and/or sensitivity to certain macro parameters, e.g. dependency to oil prices etc.

Personal customers and small corporate customers are monitored through scoring models. These are based mostly on historical data, as default rates and loss rates given a default, and experienced judgement performed by management. Rating and scoring models are described in more detail in the separate section on Risk, Liquidity and Capital management.

The collective assessment is performed through a netting principle, i.e. when rated engagements are up-rated due to estimated increases in cash flows, this improvement will be netted against losses on loans that are down-rated due to estimated decreases in cash-flows. Netting is only performed within groups with similar risk characteristics where Nordea assesses that the customers' future cash flows are insufficient to serve the loans in full.

#### **Impairment loss**

If the carrying amount of the loans is higher than the sum of the net present value of estimated cash flows, including the fair value of the collaterals and other credit enhancements, the difference is the impairment loss.

If the impairment loss is not regarded as final, the impairment loss is accounted for on an allowance account representing the accumulated impairment losses. Changes in the credit risk and accumulated impairment losses are accounted for as changes in the allowance account and as "Net loan losses" in the income statement (see also section 6 "Recognition of operating income and impairment").

If the impairment loss is regarded as final, it is reported as a realised loss. A realised loss is recognised and the value of the loan and the related allowance for impairment loss are derecognised with a corresponding gain or loss recognised in the line item "Net loan losses" in the income statement. An impairment loss is regarded as final when the obligor is filed for bankruptcy and the administrator has declared the economic outcome of the bankruptcy procedure, or when Nordea forgives its claims either through a legal based or voluntary reconstruction or when Nordea, for other reasons, deem it unlikely that the claim will be recovered.

#### **Discount rate**

The discount rate used to measure impairment is the original effective interest rate for loans attached to an individual customer or, if applicable, to a group of loans. If considered appropriate, the discount rate can be based on a method that results in an impairment that is a reasonable approximation of using the effective interest rate method as basis for the calculation.

#### **Restructured loans**

In this context a restructured loan is defined as a loan where Nordea has granted concessions to the obligor due to its deteriorated financial situation and where this concession has resulted in an impairment loss for Nordea. After a reconstruction the loan is normally regarded as not impaired if it performs according to the new conditions. Concessions made in reconstructions are regarded as final losses unless Nordea retains the possibility to regain the realised loan losses incurred. In the event of a recovery the payment is reported as a recovery of realised loan losses.

#### **Assets taken over for protection of claims**

In a financial reconstruction the creditor may concede loans to the obligor and in exchange for this concession acquires an asset pledged for the conceded loans, shares issued by the obligor or other assets. Assets taken over for protection of claims are reported on the same balance sheet line as similar assets already held by Nordea. For example a property taken over, not held for Nordea's own use, is reported together with other investment properties.

At initial recognition, all assets taken over for protection of claims are recognised at fair value and the possible difference between the carrying amount of the loan and the fair value of the assets taken over is recognised as "Net loan losses". The fair value of the asset on the date of recognition becomes its cost or amortised cost value, as applicable. In subsequent periods, assets taken over for protection of claims are valued in accordance with the valuation principles for the appropriate type of asset. Investment properties are then measured at fair value. Financial assets that are foreclosed are generally classified into the categories Available for sale or Designated at fair value through profit or loss (Fair Value Option) (see section 13 "Financial instruments") and measured at fair value. Changes in fair values are recognised in other comprehensive income for assets classified into the category Available for sale. For assets classified into the category Designated at fair value through profit or loss, changes in fair value are recognised in the income statement under the line "Net result from items at fair value".

Any change in value, after the initial recognition of the asset taken over, is presented in the income statement in line with the Group's presentation policies for the appropriate asset. "Net loan losses" in the income statement is, after the initial recognition of the asset taken over, consequently not affected by any subsequent remeasurement of the asset.

## 15. Leasing

### Nordea as lessor

#### *Finance leases*

Nordea's leasing operations mainly comprise finance leases. A finance lease is reported as a receivable from the lessee in the balance sheet item "Loans to the public" at an amount equal to the net investment in the lease. The lease payment, excluding cost of services, is recorded as repayment of principal and interest income. The income allocation is based on a pattern reflecting a constant periodic return on the net investment outstanding in respect of the finance lease.

#### *Operating leases*

Assets subject to operating leases in the balance sheet are reported in accordance with the nature of the assets, in general as property and equipment. Leasing income is recognised as income on a straight-line basis over the lease term and classified as "Net interest income". The depreciation of the leased assets is calculated on the basis of Nordea's depreciation policy for similar assets and reported as "Depreciation, amortisation and impairment charges of tangible and intangible assets" in the income statement.

### Nordea as lessee

#### *Finance leases*

Finance leases are recognised as assets and liabilities in the balance sheet at the amount equal to the fair value, or if lower, the present value of the minimum lease payments of the leased assets at the inception of the lease. The assets are reported in accordance with the nature of the assets. Lease payments are apportioned between finance charge and reduction of the outstanding liability. The finance charge is allocated to periods during the lease term so as to produce a constant periodic rate of interest on the remaining balance of the liability for each period. A finance lease also gives rise to a depreciation expense for the leased asset. The depreciation policy is consistent with that of the assets in own use. Impairment testing of leased assets is performed following the same principles as for similar owned assets.

#### *Operating leases*

Operating leases are not recognised on Nordea's balance sheet. For operating leases the lease payments are recognised as expenses in the income statement on a straight-line basis over the lease term unless another systematic way better reflects the time pattern of Nordea's benefit. The original lease terms range between 3 to 25 years.

Operating leasing is mainly related to office premises contracts and office equipment contracts normal to the business.

The central district properties in Finland, Norway and Sweden that Nordea has divested are leased back. The duration of the lease agreements was initially 3-25 years with renewal options. The lease agreements include no transfers of ownerships of the asset by the end of the lease term, nor any economic benefits from appreciation in value of the leased property. In addition, the lease term is not for the major part of the assets' economic life. These leases are thus classified as operating leases. The rental expense for these premises is recognised on the basis of the time-pattern of Nordea's economic benefit which differs from the straight-line basis and better resembles an ordinary rental arrangement.

#### *Embedded leases*

Agreements can contain a right to use an asset in return for a payment, or a series of payments, although the agreement is not in the legal form of a leasing contract. If applicable, these assets are separated from the contract and accounted for as leased assets.

## 16. Intangible assets

Intangible assets are identifiable, non-monetary assets without physical substance. The assets are under Nordea's control, which means that Nordea has the power and rights to obtain the future economic benefits flowing from the underlying resource. The intangible assets in Nordea mainly consist of goodwill, IT-development/computer software and customer related intangible assets.

### Goodwill

Goodwill represents the excess of the cost of an acquisition over the fair value of Nordea's share of net identifiable assets of the acquired group undertaking/associated undertaking at the date of acquisition. Goodwill on acquisition of group undertakings is included in "Intangible assets". Goodwill on acquisitions of associates is not recognised as a separate asset, but included in "Investments in associated undertakings". Goodwill is tested annually for impairment, or more frequently if events or changes in circumstances indicate that it might be impaired. Goodwill is carried at cost less accumulated impairment losses. Impairment losses on goodwill cannot be reversed in subsequent periods. Goodwill related to associated companies is not tested for impairment separately, but included in the total carrying amount of the associated company. The policies covering impairment testing of associated companies is disclosed in section 6 "Recognition of operating income and impairment".

As part of its transition to IFRS, Nordea elected to restate only those business combinations that occurred on or after 1 January 2004. In respect to acquisitions prior to that date, goodwill represents the amount recognised under Nordea's previous accounting framework (Swedish generally accepted accounting principles) less any amortisation and impairment losses.

### IT-development/Computer software

Costs associated with maintaining computer software programs are expensed as incurred. Costs directly associated with major software development investments, with a useful life of three years or more and the ability to generate future economic benefits, are recognised as intangible assets. These costs include software development staff costs and overhead expenditures directly attributable to preparing the asset for use. Computer software includes also acquired software licenses not related to the function of a tangible asset.

Amortisation is calculated on a straight-line basis over the useful life of the software, generally a period of 3 to 10 years.

### Customer related intangible assets

In business combinations a portion of the purchase price is normally allocated to a customer related intangible asset, if the asset is identifiable and under Nordea's control. An intangible asset is identifiable if it arises from contractual or legal rights, or is separable. The asset is amortised over its useful life.

### Impairment

Goodwill and other intangible assets with indefinite useful lives are not amortised but tested for impairment annually irrespective of any indications of impairment. Impairment testing is also performed more frequently if required due to any indication of impairment. The impairment charge is calculated as the difference between the carrying amount and the recoverable amount.

At each balance sheet date, all intangible assets with definite useful lives are reviewed for indications of impairment. If such indications exist, an analysis is performed to assess whether the carrying amount of the intangible asset is fully recoverable.

The recoverable amount is the higher of fair value less costs to sell and the value in use of the asset or the cash-generating unit, which is defined as the smallest identifiable group of assets that generates cash inflows in relation to the asset. For goodwill, the cash generating units are defined as the operating segments. The value in use is the present value of the cash flows expected to be realised from the asset or the cash-generating unit. The cash flows are assessed based on the asset or cash-generating unit in its current condition and discounted at a rate based on the long-term risk free interest rate plus a risk premium (post tax). If the recoverable amount is less than the carrying amount, an impairment loss is recognised. See Note G21 "Intangible assets" for more information on the impairment testing.

### 17. Property and equipment

Property and equipment includes own-used properties, leasehold improvements, IT equipment, furniture and other equipment. Items of property and equipment are measured at cost less accumulated depreciation and accumulated impairment losses. The cost of an item of property and equipment comprise its purchase price, as well as any directly attributable costs of bringing the asset to the working condition for its intended use. When parts of an item of property and equipment have different useful lives, they are accounted for as separate items.

Property and equipment is depreciated on a straight-line basis over the estimated useful life of the assets. The estimates of the useful life of different assets are reassessed on a yearly basis. Below follows the current estimates:

|                        |                                                                                                                                                                                                                                                                                                                  |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Buildings              | 30–75 years                                                                                                                                                                                                                                                                                                      |
| Equipment              | 3–5 years                                                                                                                                                                                                                                                                                                        |
| Leasehold improvements | Changes within buildings the shorter of 10 years and the remaining leasing term. New construction the shorter of the principles used for owned buildings and the remaining leasing term. Fixtures installed in leased properties are depreciated over the shorter of 10–20 years and the remaining leasing term. |

At each balance sheet date, Nordea assesses whether there is any indication that an item of property and equipment may be impaired. If any such indication exists, the recoverable amount of the asset is estimated and any impairment loss is recognised.

Impairment losses are reversed if the recoverable amount increases. The carrying amount is then increased to the recoverable amount, but cannot exceed the carrying amount that would have been determined had no impairment loss been recognised.

### 18. Investment property

Investment properties are primarily properties held to earn rent and/or capital appreciation. The majority of the properties in Nordea are attributable to Nordea Life & Pensions. Nordea applies the fair value model for subsequent measurement of investment properties. The best evidence of a fair value is normally given by quoted prices in an active market for similar property in the same location and condition. As these prices are rarely available discounted cash flow projection models based on reliable estimates of future cash flows are also used.

Net rental income, gains and losses as well as fair value adjustments are recognised directly in the income statement as "Net result from items at fair value".

### 19. Liabilities to policyholders

Liabilities to policyholders include obligations according to insurance contracts and investment contracts with policyholders.

An insurance contract is defined as "a contract under which one party (the insurer) accepts significant insurance risks from another party (the policyholder) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder".

Investment contracts are contracts with policyholders that have the legal form of insurance contracts but where the insurance risk transfer has been assessed to be insignificant.

The insurance risk is generally calculated as the risk sum payable as a percentage of the reserve behind the contract at the beginning of the contract period. It is Nordea's assessment that a risk percentage of five or higher is a significant insurance risk.

The contracts can be divided into the following classes:

- Insurance contracts:
  - Traditional life insurance contracts with and without discretionary participation feature
  - Unit-Linked contracts with significant insurance risk
  - Health and personal accident
- Investment contracts:
  - Investment contracts with discretionary participation feature
  - Investment contracts without discretionary participation feature

#### Insurance contracts

The measurement principles under local GAAP have been maintained consequently resulting in a non-uniform accounting policies method on consolidation.

Traditional life insurance provisions represent consolidated provisions for all the companies in Nordea Life & Pensions, including companies in Sweden, Norway, Finland, Denmark, Poland, Luxembourg, Isle of Man, Estonia and Lithuania.

In Denmark, Sweden and Finland the measurements are prepared by calculating the present value of future benefits, to which the policyholders are entitled. The calculation includes assumptions about market consistent discounting rates as well as expenses and life risk. The discount rate is based on the liabilities' current term. In Denmark, the provision, in addition, includes bonus potential on paid policies and on future premiums.

In Norway the provisions are mainly calculated on the basis of a prospective method. The discount rate used is equal to the original tariff rates and assumptions about expenses and risk.

The accounting policy for each company is based on the local structure of the business and is closely related to solvency rules and national regulation concerning profit sharing and other requirements about collective bonus potential.

Unit-Linked contracts represent life insurance provisions relating to Unit-Linked policies written either with or without an investment guarantee. Unit-Linked contracts classified as insurance contracts include the same insurance risk elements as traditional insurance contracts. These contracts are mainly recognised and measured at fair value on the basis of:

- the fair value of the assets linked to the Unit-Linked contracts, and
- the estimated present value of the insurance risk which is calculated in the same way as traditional insurance contracts considering the impact on every risk element included in the cash flows.

Health and personal accident provisions include premium reserves and claims outstanding. This item is recognised and measured on deferred basis in the same way as general insurance contracts.

#### Investment contracts

Investment contracts are contracts with policyholders, which do not transfer sufficient insurance risk to be classified as insurance contracts.

However, investment contracts with discretionary participation features are, in line with IFRS 4, accounted for as insurance contracts using local accounting principles. Nordea Life & Pension has only a small number of these contracts.

Investment contracts without discretionary participation features are recognised and measured at fair value in accordance with IAS 39 "Financial Instruments: Recognition and Measurement", equal to fair value of the assets linked to these contracts. These assets are classified into the category Designated at fair value through profit or loss to eliminate or significantly reduce an accounting mismatch.

#### Discretionary participating features (DPF)

Some traditional life insurance contracts and investment contracts include a contractual right for the policyholder to receive significant benefits in addition to guaranteed benefits. Nordea has discretion to pay these additional benefits as bonus on risk result, expense result and interest rate. These DPF-features (Collective bonus potential) are classified as liabilities in the balance sheet.

Collective bonus potential includes amounts allocated but not attributed to the policyholders. In Finland, collective bonus potential includes the policyholder's part of the total unrealised investment gains and bonus potential on paid policies and future premiums (the difference between retrospective and market consistent prospective measurement principles of the insurance contracts). In Norway, collective bonus potential includes the policyholder's part of both the total unrealised investment gains and additional reserves. In Sweden and Denmark, the main valuation principle is fair value (insurance contracts). The policyholder's part of both realised and unrealised investment gains is therefore included in the balance sheet representing either Change in technical provisions, Life and/or Change in collective bonus potentials, Life, depending on whether the investment result is allocated or not. Both the mentioned lines are included in the balance sheet line "Liabilities to policyholders".

#### Liability adequacy test

The adequacy of insurance provisions is assessed at each reporting date to ensure that the carrying amount of the liabilities is higher than the best estimate of future cash flows discounted with current interest rates. If needed, additional provisions are accounted for and recognised in the income statement.

#### 20. Taxes

The item "Income tax expense" in the income statement comprises current- and deferred income tax. The income tax expense is recognised in the income statement, except to the extent the tax effect relates to items recognised in other comprehensive income or directly in equity, in which case the tax effect is recognised in other comprehensive income or in equity respectively.

Current tax is the expected tax expense on the taxable income for the year, using tax rates enacted or substantively enacted at the reporting date, and any adjustment to tax payable in respect of previous years.

Deferred tax assets and liabilities are recognised, using the balance sheet method, for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. Deferred tax assets are recognised for the carry forward of unused tax losses and unused tax credits. Deferred tax is not recognised for temporary differences arising on initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable profit, nor for differences relating to investments in subsidiaries and associated companies to the extent that it is probable that they will not reverse in the foreseeable future. In addition, deferred tax is not recognised for taxable temporary differences arising on the initial recognition of goodwill.

Deferred tax is measured at the tax rates that are expected to be applied to the temporary differences when they reverse, based on the laws that have been enacted or substantively enacted at the reporting date. Deferred tax assets and liabilities are not discounted. A deferred tax asset is recognised only to the extent that it is probable that future taxable profits will be available against which the temporary differences, tax losses carry forward and unused tax credits can be utilised. Deferred tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable that the related tax benefit will be realised.

Current tax assets and current tax liabilities are offset when the legal right to offset exists. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset current tax assets and liabilities.

#### 21. Earnings per share

Basic earnings per share is calculated by dividing the profit or loss attributable to shareholders of Nordea Bank AB by the weighted average number of ordinary shares outstanding during the period.

Diluted earnings per share is determined by adjusting the weighted average number of ordinary shares outstanding for the effects of all dilutive potential ordinary shares, consisting of rights to performance shares in the long term incentive programmes.

The potential ordinary shares are only considered to be dilutive, on the balance sheet date, if all performance conditions are fulfilled and if a conversion to ordinary shares would decrease earnings per share. The rights are furthermore considered dilutive only when the exercise price, with the addition of future services, is lower than the period's average share price.

#### 22. Employee benefits

All forms of consideration given by Nordea to its employees as compensation for services performed are employee benefits. Short-term benefits are to be settled within twelve months after the reporting period when the services have been performed. Post-employment benefits are benefits payable after the termination of the employment. Post-employment benefits in Nordea consist only of pensions. Termination benefits normally arise if an employment is terminated before the normal retirement date, or if an employee accepts an offer of voluntary redundancy.

#### Short-term benefits

Short term benefits consist mainly of fixed and variable salary. Both fixed and variable salaries are expensed in the period when the employees have performed services to Nordea. Nordea has also issued share-based payment programmes, which are further described in section 25 "Share-based payment".

More information can be found in Note G7 "Staff costs".

### Post-employment benefits

#### *Pension plans*

The companies within Nordea have various pension plans, consisting of both defined benefit plans and defined contribution plans, reflecting national practices and conditions in the countries where Nordea operates. Defined benefit plans are predominantly sponsored in Sweden, Norway and Finland. The major defined benefit plans are funded schemes covered by assets in pension funds/foundations. If the fair value of plan assets, associated with a specific pension plan, is lower than the gross present value of the defined benefit obligation, the net amount is, after adjusting for unrecognised actuarial gains/losses, recognised as a liability (defined benefit obligation). If not, the net amount is recognised as an asset (defined benefit asset). Non-funded pension plans are recognised as defined benefit obligations.

Most pensions in Denmark, but also plans in other countries, are based on defined contribution arrangements that hold no pension liability for Nordea. Nordea also contributes to public pension systems.

#### *Pension costs*

The pension calculations are carried out by country and by pension plan in accordance with IAS 19.

Obligations for defined contribution pension plans are recognised as an expense as the employee renders services to the entity and the contribution payable in exchange for that service becomes due. Nordea's net obligation for defined benefit pension plans is calculated separately for each plan by estimating the amount of future benefit that employees have earned for their service in the current and prior periods. That benefit is discounted to determine its present value. Any unrecognised past service cost and the fair value of any plan assets are deducted and unrecognised actuarial gains/losses adjusted for. Actuarial calculations, performed annually, are applied to assess the present value of defined benefit obligations and related costs, based on several actuarial and financial assumptions (as disclosed in Note G34 "Retirement benefit obligations").

When establishing the present value of the obligation and the fair value of any plan assets, actuarial gains and losses may arise as a result of changes in actuarial assumptions and experience effects (actual outcome compared to assumptions). The actuarial gains and losses are not recognised immediately in the income statement. Rather, only when the net cumulative unrecognised actuarial gain or loss exceeds a "corridor" equal to 10 percent of the greater of either the present value of the defined benefit obligation or the fair value of the plan assets, the excess is recognised in the income statement over the expected average remaining service period of the employees participating in the plan. Otherwise, actuarial gains and losses are not recognised.

When the calculation results in a benefit to the Nordea entity, the recognised asset is limited to the net total of any unrecognised actuarial losses, unrecognised past service costs and the present value of any future refunds from the plan or reductions in future contributions to the plan.

Social security contribution is calculated and accounted for based on the net recognised surplus or deficit by plan.

#### *Discount rate in Defined Benefit Plans*

The discount rate is determined by reference to high quality corporate bonds, where a deep enough market for such bonds exists. Covered bonds are in this context considered to be corporate bonds. In countries where no such market exists the discount rate is determined by reference to government bond yields. In Sweden, Finland and Denmark the discount rate is determined with reference to corporate bonds and in Norway with reference to government bonds.

### Termination benefits

As mentioned above termination benefits normally arise if an employment is terminated before the normal retirement date, or if an employee accepts an offer of voluntary redundancy. Termination benefits do not arise if the employees have to continue performing services and the termination benefits can be considered to be normal compensation for those services.

Termination benefits are expensed when Nordea has an obligation to make the payment. An obligation arises when there is a formal plan committed to on the appropriate organisational level and when Nordea is without realistic possibility of withdrawal, which normally occurs when the plan has been communicated to the group affected or to their representatives.

Termination benefits can include both short-term benefits, for instance a number of months' salary, and post-employment benefits, normally in the form of early retirement. Short-term benefits are classified as "Salaries and remuneration" and post-employment benefits as "Pension costs" in Note G7 "Staff costs".

## 23. Equity

### Non-controlling interests

Non-controlling interests comprise the portion of net assets of group undertakings not owned directly or indirectly by Nordea Bank AB (publ).

### Share premium reserve

The share premium reserve consists of the difference between the subscription price and the quota value of the shares in Nordea's rights issue. Transaction costs in connection to the rights issue have been deducted.

### Other reserves

Other reserves comprise income and expenses, net after tax effects, which are reported in equity through other comprehensive income in accordance with IFRS. These reserves include fair value reserves for cash flow hedges and financial assets classified into the category Available for sale as well as a reserve for translation differences.

### Retained earnings

Apart from undistributed profits from previous years, retained earnings include the equity portion of untaxed reserves. Untaxed reserves according to national rules are recorded as equity net of deferred tax at prevailing tax rates in the respective country.

In addition, Nordea's share of the earnings in associated companies, after the acquisition date, that have not been distributed is included in retained earnings.

### Treasury shares

Treasury shares are not accounted for as assets. Acquisitions of treasury shares are classified as deductions of "Retained earnings" in the balance sheet. Also own shares in trading portfolios are classified as treasury shares. Divested treasury shares are recognised as an increase of "Retained earnings".

Contracts on Nordea shares that can be settled net in cash are either a financial asset or financial liability.

## 24. Financial guarantee contracts and credit commitments

Upon initial recognition, premiums received in issued financial guarantee contracts and credit commitments are recognised as prepaid income on the balance sheet. The guarantees and irrevocable credit commitments are subsequently measured, and recognised on the balance sheet, at the higher of

either the received fee less amortisation, or a provision calculated as the discounted best estimate of the expenditure required to settle the present obligation. Changes in provisions are recognised in the income statement in the item "Net loan losses".

Premiums received for financial guarantees are, as stated in section 6 "Recognition of operating income and impairment", amortised over the guarantee period and recognised as "Fee and commission income" in the income statement. Premiums received on credit commitments are generally amortised over the loan commitment period. The contractual amounts are recognised off-balance sheet, financial guarantees in the item "Contingent liabilities" and irrevocable credit commitments in the item "Commitments".

## 25. Share-based payment

### Equity-settled programmes

Nordea has annually issued Long Term Incentive Programmes from 2007 through 2011. Employees participating in these programmes are granted share-based and equity-settled rights, i.e. rights to receive shares for free or to acquire shares in Nordea at a significant discount compared to the share price at grant date. The value of such rights shall be expensed. The expense is based on the estimated fair value of each right at grant date. The total fair value of these rights is determined based on the group's estimate of the number of rights that will eventually vest, which is reassessed at each reporting date, and is expensed on a straight-line basis over the vesting period. The vesting period is the period that the employees have to remain in service in Nordea in order for their rights to vest. Market performance conditions in D-rights/Performance Share II are reflected as a probability adjustment to the initial estimate of fair value at grant date. There is no adjustment (true-up) for differences between estimated and actual vesting due to market conditions.

Social security costs are also allocated over the vesting period, in accordance with statement UFR 7 issued by the Swedish Financial Reporting Board: "IFRS 2 and social security contributions for listed enterprises". The provision for social security costs is reassessed on each reporting occasion to ensure that the provision is based on the rights' fair value at the reporting date.

For more information see Note G7 "Staff costs".

### Cash-settled programmes

Nordea has to defer payment of variable salaries under Nordic FSA's regulations and general guidelines. The deferred amounts are to some extent indexed using Nordea's TSR (Total Shareholders' Return) and these "programmes" are cash-settled share-based programmes under IFRS. These programmes are fully vested when the variable salaries are initially deferred and the fair value of the obligation is remeasured on a continuous basis. The remeasurements are, together with the related social charges, recognised in the income statement in the item "Net result from items at fair value".

For more information see Note G7 "Staff costs".

## 26. Related party transactions

Nordea defines related parties as:

- Shareholders with significant influence
- Group undertakings
- Associated undertakings
- Key management personnel
- Other related parties

All transactions with related parties are made on an arm's length basis.

## Shareholders with significant influence

Shareholders with significant influence are shareholders that, by any means, have a significant influence over Nordea.

## Group undertakings

For the definition of Group undertakings see section 5 "Principles of consolidation". Further information on the undertakings included in the Nordea Group is found in Note P21 "Investments in group undertakings".

Group internal transactions between legal entities are performed according to arm's length principles in conformity with OECD requirements on transfer pricing. These transactions are eliminated in the consolidated accounts.

## Associated undertakings

For the definition of Associated undertakings see section 5 "Principles of consolidation".

Further information on the associated undertakings included in the Nordea Group is found in Note G20 "Investments in associated undertakings".

## Key management personnel

Key management personnel includes the following positions:

- The Board of Directors
- The Chief Executive Officer (CEO)
- The Group Executive Management (GEM)

For information about compensation, pensions and other transactions with key management personnel, see Note G7 "Staff costs".

## Other related parties

Other related parties comprise close family members to individuals in key management personnel. Other related parties also include companies significantly influenced by key management personnel in Nordea Group as well as companies significantly influenced by close family members to these key management personnel. Other related parties also include Nordea's pension foundations.

Information concerning transactions between Nordea and other related parties is found in Note G47 "Related-party transactions".

## Operating segments

### Measurement of Operating segments' performance

The measurement principles and allocation between operating segments follow the information reported to the Chief Operating Decision Maker (CODM), as required by IFRS 8. In Nordea the CODM has been defined as Group Executive Management. The main differences compared to the business area reporting are that the information to CODM is prepared using plan rates and to that different allocations principles between operating segments have been applied.

### Changes in basis of segmentation

A new organisation has been established, developed around the three main business areas Retail Banking, Wholesale Banking and Wealth Management. In addition a business unit called Group Operations & Other Lines of Business has been established. As from the third quarter 2011 the segment reporting has been changed as a consequence of these organisational changes. Group Corporate Centre and the separate divisions within the three main business areas and within the business unit Group Operations & Other Lines of Business have, based on the new organisation, been identified as operating segments. The changes compared to the previous segment reporting are mainly that Nordic Banking has been renamed Retail Banking Nordic, that the banking activities in Russia, that were previously included in New European Markets, are now reported as an own operating segment within the main business area Wholesale Banking and that the service units and support functions within the main business areas Retail Banking and Wholesale Banking are now disclosed separately as operating segments named Retail Banking Other and Wholesale Banking Other. A new operating segment named Corporate & Institutional Banking has been established, including the former division Corporate Merchant Banking, previ-

ously included in Nordic Banking, and the former operating segment Financial Institutions. Capital Markets unallocated and Group Corporate Centre are furthermore disclosed separately as operating segments. Other operating segments, below the quantitative thresholds in IFRS 8, are included in Other operating segments. Comparative information has been restated accordingly.

### Reportable Operating segments

Retail Banking conducts a full service banking operation and offers a wide range of products. It is Nordea's largest customer area and serves household customers and corporate customers in the Nordic markets (Retail Banking Nordic) as well as in Poland and the Baltic countries (Retail Banking Poland & Baltic countries). Wholesale Banking provides banking and other financial solutions to large Nordic and international corporate, institutional and public companies. The division Corporate & Institutional Banking is a customer oriented organisation serving the largest globally operating corporates. This division is also responsible for Nordea's customers within the financial sector, and offers single products such as funds, equity products etcetera as well as consulting services within asset allocation and fund sales. The division Shipping, Oil Services & International is responsible for Nordea's customers within the shipping, offshore and oil services industries and provides tailor made solutions and syndicated loan transactions. Nordea Bank Russia offers a full range of bank services to corporate and private customers in Russia. Capital Markets unallocated includes the result in Capital Markets which is not allocated to the main business areas. Group Corporate Centre's main objective is to manage the Group's funding and to support the management and control of the Nordea Group. The main income in Group Corporate Centre originates from Group Treasury.

| <b>Total</b>                                   | <b>-299</b> | <b>-262</b> |

1) Pension cost for executives as defined in footnote 3 above, amounts to EUR 8m (EUR 5m) and pension obligations to EUR 56m (EUR 54m).

2) Excluding social security contributions. Including social security contributions EUR 124m (EUR 37m).

3) Last year the pension cost for defined contribution plans included an expense of EUR 46m for contributions payable to the Avtalefestet Pensjon plan in Norway.

**Additional disclosures on remuneration under Nordic FSAs' regulations and general guidelines**

The qualitative disclosures under these regulations can be found in the separate section on remuneration in the Board of Directors' Report, while the quantitative disclosures will be published in a separate report on Nordea's homepage ([www.nordea.com](http://www.nordea.com)) in due time before the Annual General Meeting 2012.

**Remuneration to the Board of Directors, CEO and Group Executive Management****Board remuneration**

The remuneration for the Board was decided to be unchanged by the Annual General Meeting (AGM) 2011. The remuneration was EUR 252,000 for the Chairman, EUR 97,650 for the Vice Chairman and EUR 75,600 for other members. The annual remuneration for committee meetings is as from the AGM 2011 EUR 16,600 for the chairman of the committee and EUR 12,900 for other members. Board members employed by Nordea do not receive separate compensation for their Board membership. There are no commitments for severance pay, pension or other compensation to the members of the Board, except for pension commitments to one board member previously employed by Nordea.

Pension to the former Chairman of the Board, Hans Dalborg, is fully covered by an external pension institute and paid in full by Nordea. Hence Nordea does not have any pension obligation towards Hans Dalborg.

**Salary and benefits  
CEO**

The fixed salary, variable salary part and contract terms for the CEO are proposed by the Board Remuneration Committee (BRC) and approved by the Board. Variable salary part, which is based on agreed, specific targets, can amount to a maximum of 35% of the fixed salary.

The fixed salary was increased to EUR 1,162,884 (SEK 10,500,000) as from 1 January 2011, which was announced at the AGM in 2011. The increase followed a period of close to

three years, from April 2008 until the end of 2010, where the CEO had taken a voluntary initiative prolonged by the requirements in the rights issue of new shares to keep the fixed salary unchanged and abstain from the variable salary part in 2009 and 2010. From 2011 the CEO has earned variable salary part and the fixed salary has been adjusted to be in line with market levels in accordance with Nordea's remuneration guidelines approved by the AGM. The CEO takes part of the Long Term Incentive Programmes as described in the separate section on remuneration in the Board of Directors' report and below. Benefits for the CEO include primarily car and housing.

**Group Executive Management (GEM)**

The BRC prepares alterations in salary levels and outcome of variable salary part as well as other changes in the compensation package for members of GEM, for resolution by the Board. Variable salary part, which is based on agreed, specific targets, can be a maximum of 35% of the fixed salary.

Also most GEM members have been part of the voluntary initiative prolonged by the requirements in the rights issue of new shares to abstain from variable salary part 2009 and 2010 and to keep fixed salary unchanged from April 2008 until the end of 2010. The increase from 2010 to 2011 is explained by the adjustment of the fixed salary levels as from 1 January 2011, the possibility for all members of GEM to earn variable salary part in accordance with Nordea's remuneration guidelines and the increased number of GEM members. As for the CEO, GEM members take part of the Long Term Incentive Programmes. Benefits include primarily car and/or housing.

1) The Board fee is a fixed annual fee as from the Annual General Meeting (AGM) 2011. These are accounted for in SEK and translated into EUR based on the average exchange rate each year.

2) CEO and members of GEM hold 12,253 A-rights, 12,253 B-rights and 4,901 D-rights in LTIP 2009, have a conditional right to maximum 61,158 matching shares, 122,316 performance shares I and 61,158 performance shares II in LTIP 2010 and 110,711 matching shares, 221,422 performance shares I and 110,711 performance shares II in LTIP 2011. For more information on the valuation of the Long Term Incentive Programmes, see below. The disclosed expense is calculated in accordance with IFRS 2 "Share-based Payment".

3) New Chairman of the Board as from the AGM 2011.

4) New Vice Chairman of the Board as from the AGM 2011.

5) Resigned as Chairman of the Board as from the AGM 2011.

6) Employee representatives excluded.

7) Resigned as Board member during 2010 or 2011.

8) The increase in 2011 is due to an actual salary increase of EUR 254,727, as communicated at the AGM 2011, and exchange rate effects. In 2010 the CEO abstained from variable salary part. Benefits are included at taxable values after salary reduction.

9) GEM members included for the period they have been appointed. As disclosed in the Annual Report 2010 two members of GEM earned variable salary part in 2010 and the variable salary part also included a guaranteed variable salary part for one new GEM member. Benefits are included at taxable values.

### Pension

#### CEO

The retirement age for the CEO is 60 and his pension amounts to 50% of the pensionable income for life. From 1 January 2011 fixed salary is the pensionable income while variable salary part is no longer included in pensionable income. The maximum pensionable income is from 1 January 2011 increased from 190 to 200 Swedish Income Base Amounts. This has led to a retroactive adjustment affecting pension cost in 2011, but the impact on the pension cost as from 2012 will be significantly lower. The pension obligation is fully funded, meaning that it is covered in full by plan assets. At retirement the pension risk is transferred to the CEO. Pension payments are to be made in accordance with local legislations and pension insurance conditions.

### Group Executive Management (GEM)

The pension agreements vary due to local country practices.

GEM members are entitled to retire with pension at the age of 60, 62 or 70. Pension agreements are Defined Benefit Plans (DBP), Defined Contribution Plans (DCP) or a combination of such plans.

Two members have DBPs not based on collective agreements. One of these DBPs provides retirement pension amounting to 50% of pensionable income for life from age 62, including national pension benefits. The second DBP not based on a collective agreement provides a retirement pension from age 60, including both national pension benefits and previously earned pension. The retirement pension benefit in this plan decreased from 70% to 66% of pensionable income for future earnings as from 1 January 2011. Two members have DBPs in accordance with the Swedish collective agreement and complementing DCPs. Three members have DCPs only. Fixed salary is pensionable income for all GEM-members. Variable salary part is included for two members.

| <b>Total</b>                                  | <b>-3,699,230</b>         | <b>34,775,213</b>               | <b>-2,578,874</b>         | <b>40,421,192</b>               |

1) Employee representatives excluded.

2) The main reason behind the increase in pension obligation and pension cost is the increase of the maximum pensionable income, from 190 Swedish Income Base Amounts to 200 Swedish Income Base Amounts. The main effect is in Past service cost which explains EUR 838,042 of the pension cost for 2011 (Past service cost zero in 2010). The Past service cost constitutes the retroactive adjustment of the pension earned in earlier periods following the increase in the maximum pensionable income. A change in the exchange rate has had an increasing impact on the new pension rights earned in 2011, affecting pension cost, and changed actuarial assumptions (mainly the discount rate) have had an increasing impact on the pension obligation.

3) Members of GEM included for the period they have been appointed. The pension obligation is the obligation towards the members of GEM as of 31 December. The increase in pension costs 2011 is partly due to exchange rate effects.

4) Pension costs are related to pension premiums paid in DCP agreements and pension rights earned during the year in DBP agreements (Service cost, Past service cost and Curtailments and settlements as defined in IAS 19). Of the total pension cost EUR 1,029,988 relates to DCP agreements.

5) Pension obligations calculated in accordance with IAS 19. These obligations are dependent of changes in actuarial assumptions and inter annual variations can therefore be significant. IAS 19 includes an assumption about future increases in salary, which leads to that the pension obligations disclosed are the earned pension rights calculated using the expected salary levels at retirement. The pension plans are funded, meaning that these obligations are backed with plan assets with fair value generally on a similar level as the obligations. The main reason behind the decrease in pension obligation is that the composition of GEM has changed, with a larger portion of the members having DCPs.

6) The pension obligation for Vesa Vainio and Thorleif Krarup is mainly due to pension rights earned in, and funded by, banks forming Nordea. The increase in 2011 is related to changes in actuarial assumptions.

**Notice period and severance pay**

In accordance with their employment contracts CEO and three GEM members have a notice period of 12 months and a severance pay equal to 12 months' salary to be reduced by the salary the executive receives as a result of any other employment during these 12 months. Four GEM members are entitled to 6 months' salary during the notice period, and with regard to severance pay 18 months' salary to be reduced by the salary they receive as a result of any other employment during these 18 months.

**Loans to key management personnel**

Loans to key management personnel, as defined in Note G1 section 26, amounts to EUR 4m (EUR 5m). Interest income on these loans amounts to EUR 0m (EUR 0m).

For key management personnel who are employed by Nordea the same credit terms apply as for other employees, except for key management personnel in Denmark whose loans are granted on the same term as for external customers. In Norway the employee interest rate for loans is 100 basis points lower than the best corresponding interest rate for external customers, with a cap on the loan amount of 3 times salary grade 55 plus NOK 100,000. In Finland the employee interest rate for loans corresponds to Nordea's funding cost with a margin of 10 basis points up to EUR 400,000, and 30 basis points for loans over EUR 400,000. In Sweden the employee interest rate on fixed- and variable interest rate loans is 215 basis points lower than the corresponding interest rate for external customers (with a lower limit of 50 basis points for variable interest rate loans and 150 basis points for fixed interest rate loans). There is currently a cap of 57 Swedish price base amounts both on fixed- and variable interest rate loans. Interest on loans above the defined caps are set on market terms. Loans to family members of key management personnel are granted on normal market terms, as well as loans to key management personnel who are not employed by Nordea.

1) The new rights issue, which was resolved on an extra ordinary general meeting on 12 March 2009, triggered recalculations of some of the parameters in LTIP 2007 and LTIP 2008, in accordance with the agreements of the programmes. The recalculations were performed with the purpose of putting the participants in an equivalent financial position as the one being at hand immediately prior to the new rights issue.

## G7

## Staff costs, cont.

**Conditions and requirements**

For each ordinary share the participants lock in to the LTIPs, they are granted a conditional A-right/Matching Share to acquire or receive ordinary shares based on continued employment, with certain exemptions, and the conditional B-D-rights/Performance Share I and II to acquire or receive additional ordinary shares also based on fulfilment of certain performance conditions. The performance conditions for B- and C-rights and for Performance Share I comprise a target growth in risk adjusted profit per share (RAPPS). Should the reported earnings per share (EPS) be lower than a predetermined level the participants are not entitled to exercise any

B- or C-rights or Performance Share I. The performance conditions for D-rights and Performance Share II are market related and comprise growth in total shareholder return (TSR) in comparison with a peer group's TSR.

When the performance conditions are not fulfilled in full, the rights that are no longer exercisable are shown as forfeited in the previous tables, together with shares forfeited due to participants leaving the Nordea Group.

The exercise price, where applicable, for the ordinary shares is adjusted for dividends, however never adjusted below a predetermined price. Furthermore the profit for each right is capped.

### Fair value calculations

The fair value is measured through the use of generally accepted valuation models with the following input factors:

|                                 | LTIP 2011 | LTIP 2010 | LTIP 2009 | LTIP 2008 | LTIP 2007 |
|---------------------------------|-----------|-----------|-----------|-----------|-----------|
| Weighted average share price    | EUR 8.39  | EUR 6.88  | EUR 5.79  | EUR 11.08 | EUR 12.23 |
| Right life                      | 3.0 years | 3.0 years | 2.5 years | 2.5 years | 3.0 years |
| Deduction of expected dividends | No        | No        | Yes       | Yes       | Yes       |
| Risk free rate                  | 1.48%     | 1.99%     | 1.84%     | 3.83%     | 4.20%     |
| Expected volatility             | 36%       | 40%       | 29%       | 21%       | 20%       |

Expected volatility is based on historical values. As the exercise price (zero for LTIP 2010 and LTIP 2011) is significantly below the share price at grant date, the value has a limited sensitivity to expected volatility and risk-free interest. The fair value calculations are also based on estimated early exercise behaviour during the programmes' exercise windows, however not applicable for LTIP 2010 and LTIP 2011.

The value of the D-rights/Performance Share II are based on market related conditions and fulfilment of the TSR targets have been taken into consideration when calculating the rights' fair value at grant date. When calculating the impact from the TSR targets it has been assumed that all possible outcomes have equal possibilities.

### Expenses<sup>1</sup>

| EURm               | LTIP 2011 | LTIP 2010 | LTIP 2009 | LTIP 2008 | LTIP 2007 |
|--------------------|-----------|-----------|-----------|-----------|-----------|
| Expected expense   | -16       | -10       | -11       | -10       | -12       |
| Maximum expense    | -26       | -20       | -11       | -10       | -12       |
| Total expense 2011 | -3        | -4        | -2        | —         | —         |
| Total expense 2010 | —         | -2        | -6        | -3        | —         |

1) All amounts excluding social security contribution.

When calculating the expected expense an expected annual employee turnover of 5% has been used in LTIP 2010 and LTIP 2011. The expected expense is recognised over the vesting period of 36 months (LTIP 2010 and LTIP 2011) and 24 months (LTIP 2009, 2008 and 2007).

### Cash-settled share-based payment transactions

Nordea operates share-linked deferrals on parts of variable compensation for certain employee categories, indexed with Nordea Total Shareholder Returns (TSR) and either vesting after three years or vesting in equal instalments over a three to five year period. Since 2011 Nordea also operates TSR-linked retention on part of variable compensation for certain

employee categories. The below table only includes deferred amounts indexed with Nordea TSR. Nordea also operates deferrals not being TSR-linked, which are not included in the table below. Further information regarding all deferred amounts can be found in the separate report on remuneration published on Nordea's homepage ([www.nordea.com](http://www.nordea.com)).

| EURm                                                                           | 2011      | 2010      |
|--------------------------------------------------------------------------------|-----------|-----------|
| Deferred TSR-linked compensation at beginning of the year                      | 13        | —         |
| Accrued deferred/retained TSR-linked compensation during the year <sup>1</sup> | 5         | 11        |
| TSR indexation during the year                                                 | -3        | 1         |
| Payments during the year <sup>2</sup>                                          | -4        | —         |
| Translation differences                                                        | -1        | 1         |
| <b>Deferred TSR-linked compensation at end of year</b>                         | <b>10</b> | <b>13</b> |

1) Of which EUR 4m is available for disposal by the employees in 2012. Additional deferrals not being TSR-linked amount to EUR 13m (EUR 0m). Due to that the allocation of variable compensation is not finally decided during the current year, the deferred amount during the year relates to variable compensation earned the previous year.

2) There have been no adjustments due to forfeitures in 2011.

## G16

## Financial instruments pledged as collateral

## Financial instruments pledged as collateral

In repurchase transactions and in securities lending transactions, non-cash assets are transferred as collateral. When the counterpart receiving the collateral has the right to sell or repledge the assets, the assets are reclassified in the balance sheet to the item Financial instruments pledged as collateral.

| EURm                        | 31 Dec<br>2011 | 31 Dec<br>2010 |

| <b>Total</b>                | <b>8,373</b>   | <b>9,494</b>   |

## Transferred assets that are still recognised in the balance sheet and associated liabilities

All assets transferred and the liabilities associated with these transactions are specified in the following tables. The assets continue to be recognised on the balance sheet since Nordea is still exposed to changes in the fair value of the assets. Therefore, these assets and its associated liabilities are included in the following tables.

| <b>Carrying amount at end of year</b> | <b>-215</b>  | <b>1,127</b> |
| <b>Liabilities</b>                    |              |              |
| Carrying amount at beginning of year  | 898          | 874          |
| Changes during the year               |              |              |
| Revaluation of hedged items           | 366          | -33          |
| Translation differences               | 10           | 57           |
| <b>Carrying amount at end of year</b> | <b>1,274</b> | <b>898</b>   |

The carrying amount at end of year represents accumulated changes in the fair value for those repricing time periods in which the hedged item is an asset respectively a liability. When the hedged item is an asset, the change in the fair value of the hedged item is presented within assets and when the hedged item is a liability, the change is presented as a liability.

The total amount is expected to be settled after more than 1 year.

### Impairment test

A cash generating unit, defined as the operating segment, is the basis for the goodwill impairment test.

The impairment test is performed for each cash generating unit by comparing the carrying amount of the net assets, including goodwill, with the recoverable amount. The recoverable amount is the value in use and is estimated based on discounted cash flows. Cash flows have been estimated for 30 years.

Cash flows in the near future (between 2-3 years) are based on financial forecasts, derived from forecasted margins, volumes, sales and cost development. These input variables are based on historical data adjusted to reflect Nordea's assumptions about the future. Cash flows for the period beyond the forecasting period are based on estimated sector growth rates. For impairment testing, a growth rate of 4% has been used for all cash generating units.

Growth rates are based on historical data, updated to reflect the current situation. Cash flows are risk adjusted using normalised loan losses.

The derived cash flows are discounted at a rate based on the long-term risk free interest rate plus a risk premium. The post-tax discount rate used for the impairment test 2011 is 9% (9.5%), which equals a pre-tax rate of 11.9% (12.4%). For operations in Russia, an additional risk premium of 200 basis points has been applied. The impairment tests conducted in 2011 did not indicate any need for goodwill impairment. See Note G1 section 4 for more information. A reasonably possible change in key assumptions, an increase in the discount rate of 1 percentage point or a reduction in the future growth rate of 2 percentage points, would not result in an impairment in any of the cash generating units.

The total amount is expected to be settled after more than 1 year.

## G23

## Leasing

**Nordea as a lessor****Finance leases**

Nordea owns assets leased to customers under finance lease agreements. Finance lease agreements are reported as receivables from the lessee included in "Loans to the public" (see Note G14) at an amount equal to the net investment in the lease. The leased assets mainly comprise vehicles, machinery and other equipment.

Reconciliation of gross investments and present value of future minimum lease payments:

| EURm                                                                      | 31 Dec<br>2011 | 31 Dec<br>2010 |

1) Together with fair value adjustments included in Net result from items at fair value.

The method applied when calculating fair value is a rate of return calculation, based on internal models. As a supplement to these values, appraisals were obtained from independent external valuers for parts of the investment property.

Approximately 80% of the investment properties are valued using internal models based on a rate of return calculation. For the remaining 20% of the investment properties, appraisals were obtained from independent external valuers.

Liabilities to policyholders are obligations related to insurance contracts. These contracts are divided into contracts containing insurance risk and contracts without insurance risk. The latter are pure investments contracts.

Insurance contracts consists of Life insurance provisions and other insurance related items.

Life insurance contracts are measured and recognised in accordance with IFRS 4, i.e. the measurement and recognition principle under previous GAAP has been maintained consequently resulting in non-uniform accounting policies method on consolidation. Each market represented by Nordic and European entities measure and recognises insurance contracts using local accounting policies.

Provision for restructuring costs amounts to EUR 152m and relates mainly to New Normal. The New Normal provision relates to termination benefits (EUR 120m) as well as other provisions mainly related to redundant premises (EUR 20m) arising from the so called New Normal initiative. The New Normal initiative has been launched to reach the anticipated cost efficiency and profitability, and as a part of this Nordea plans to reduce the number of employees, partly through close down of branches. The majority of the provision is expected to be used during 2012. As with any other provision there is an uncertainty around timing and amount, which is expected to be decreased as the plan is being executed during 2012.

Provision for Transfer risk of EUR 13m is related to off-balance sheet items. Transfer risk relating to loans is included in the item Allowances for collectively assessed impaired loans in Note G14. Provision for transfer risk is depending on the volume of business with different countries.

Loan loss provisions for individually assessed guarantees and other commitments amounted to EUR 80m. The significant decrease compared to the opening balance is due to that significant payments have been made in relation to Danish state guarantees.

Nordea has an on-going tax litigation related to the sales gain in respect of the divestment of Nordea's owner occupied properties in Sweden, which has been provided for with EUR 111m. Nordea is of the opinion that all tax rules and regulations have been complied with and is contesting the claim in court. The court procedures are expected to have a duration of several years.

Other provisions refers to the following provisions: Provision for premiums in Defined Contribution Plans EUR 44m (EUR 11m expected to be settled 2012), provision for state guarantee fees EUR 57m to be settled 2012 and other provisions amounting to EUR 25m (EUR 5m expected to be settled 2012). The provision related to Defined Contribution Plans is expected to be settled over the following 5–10 years.

## G34

## Retirement benefit obligations

| EURm                       | 31 Dec<br>2011 | 31 Dec<br>2010 |
|----------------------------|----------------|----------------|
| Defined benefit plans, net | 102            | 150            |
| <b>Total</b>               | <b>102</b>     | <b>150</b>     |

Nordea has pension obligations from defined benefit plans (DBP) in all Nordic countries with the predominant share in Sweden, Norway and Finland. The plans in Finland, and Norway as from 2011, are closed to new employees and pensions for new employees are instead based on defined contribution plan (DCP) arrangements as is also the case in Denmark. DCPs are not reflected on the balance sheet, except when earned pensions rights have not yet been paid for. Nordea also contributes to public pension plans.

IAS 19 secures that the market based value of pension obligations net of plan assets backing these obligations will be reflected in the Group's balance sheet. The major plans in each country are funded schemes covered by assets in pension funds/foundations.

| <b>2010</b>        |        |       |        |     |
| Members            | 21,979 | 6,068 | 19,208 | 59  |
| Average member age | 56     | 56    | 61     | 73  |

#### Changes in pension plans 2011

In 2010 the Norwegian Parliament decided to change the AFP (Avtalefestet Pensjon) plan in Norway as from 2011. The change gave rise to a new multiemployer DBP plan that cannot be calculated as DBP by year end 2011, as information on Nordea's share of the liabilities and pension costs in the plan is not available from Fellesordningen (the administrator). Consequently the new AFP plan has to be accounted for as a DCP in accordance with IAS 19. Information on the funded status in the plan is not available. However, Fellesordningen has increased the premium rate from 1.60% of the salary basis in 2011 to 1.75% in 2012, and the rate is expected to increase further in the future.

#### IAS 19 pension calculations and assumptions

Calculations on major plans are performed by external liability calculators and are based on the actuarial assumptions fixed for each of the Group's pension plans.

| Assumptions                            | Swe  | Nor  | Fin  | Den  |
|----------------------------------------|------|------|------|------|
| <b>2011</b>                            |      |      |      |      |
| Discount rate                          | 3.5% | 3.0% | 4.5% | 3.5% |
| Salary increase                        | 3.0% | 3.0% | 3.0% | 3.5% |
| Inflation                              | 2.0% | 2.0% | 2.0% | 2.0% |
| Expected return on assets before taxes | 4.5% | 4.0% | 5.5% | 4.5% |
| <b>2010</b>                            |      |      |      |      |
| Discount rate                          | 4.0% | 4.0% | 4.5% | 4.0% |
| Salary increase                        | 3.5% | 3.5% | 3.5% | 3.5% |
| Inflation                              | 2.0% | 2.0% | 2.0% | 2.0% |
| Expected return on assets before taxes | 5.0% | 5.0% | 5.5% | 5.0% |

The expected return on assets is based on long term expectations for return on the different asset classes. On bonds, this is linked to the discount rate while equities and real estate have an added risk premium.

The discount rate has the most significant impact on the obligation and pension cost. If the discount rate is reduced the pension obligation will increase and vice versa. A one percentage point increase in the discount rate would lead to a decrease in pension obligation of 13% and in service cost of 22%. A one percentage point decrease in the discount rate would lead to an increase in pension obligation of 16% and in service cost of 29%.

#### Asset composition

The combined return on assets in 2011 was 3.5% (8.0%) mainly driven by the negative development in government bond holdings.

At the end of the year, the equity exposure in pension funds/foundations represented 17% (19%) of total assets.

## Defined benefit pension cost

The total net pension cost related to defined benefit plans recognised in the Group's income statement (as staff costs) for the year is EUR 124m (EUR 37m). Total pension costs comprise defined benefit pension costs as well as costs related to defined contribution plans (see specification in Note G7).

| Recognised net defined benefit cost, EURm    | Swe<br>2011 | Nor<br>2011 | Fin<br>2011 | Den<br>2011 | Total<br>2011 | Total<br>2010 |

| Recognised past service cost <sup>2</sup>    | 14          | 17          | —           | 0           | 31            | 3             |
| Recognised actuarial gains (-)/losses        | 10          | 6           | 1           | 0           | 17            | 20            |
| SWT/SSC <sup>3</sup>                         | 13          | 7           | —           | —           | 20            | 10            |
| <b>Pension cost on defined benefit plans</b> | <b>76</b>   | <b>55</b>   | <b>-7</b>   | <b>0</b>    | <b>124</b>    | <b>37</b>     |

1) Includes recognised actuarial losses of EUR 2m (EUR 25m) related to the curtailment.

2) Of which EUR 30m related to New Normal in 2011.

3) Cost related to special wage tax (SWT) in Sweden and social security contribution (SSC) in Norway.

The pension cost is higher than expected in the beginning of the year, mainly due to the New Normal initiative further described in the Board of Directors' report. The pension cost on defined benefit plans is expected to decrease in 2012, mainly as a consequence of that past service cost is expected to decrease.

The Group expects to contribute EUR 61m to its defined benefit plans in 2012.

## Key management personnel

The Group's total pension obligations relating to key management personnel amounted to EUR 35m (EUR 40m) at the end of the year. These obligations are to a high degree covered by plan assets. Defined benefit pension costs (Service cost, Past service cost and Curtailments and settlements as defined in IAS 19) relating to key management personnel in 2011 were EUR 3m (EUR 2m). Complete information concerning key management personnel is disclosed in Note G7.

## G35

## Subordinated liabilities

| EURm                                 | 31 Dec<br>2011 | 31 Dec<br>2010 |
|--------------------------------------|----------------|----------------|
| Dated subordinated debenture loans   | 3,818          | 5,173          |
| Undated subordinated debenture loans | 658            | 626            |
| Hybrid capital loans                 | 2,027          | 1,962          |
| <b>Total</b>                         | <b>6,503</b>   | <b>7,761</b>   |

These debenture loans are subordinated to other liabilities. Dated debenture loans entitle the lender to payment before undated subordinated loans and hybrid capital loans. Within each respective category, the loans entitle lenders to equal payment rights.

## G36

## Assets pledged as security for own liabilities

## The above pledges pertain to the following liabilities

|                                         |                |                |
|-----------------------------------------|----------------|----------------|
| Deposits by credit institutions         | 10,263         | 18,728         |
| Deposits and borrowings from the public | 2,379          | 12,585         |
| Derivatives                             | 639            | 417            |
| Debt securities in issue                | 78,208         | 67,756         |
| Other liabilities and commitments       | 36,970         | 13,294         |
| <b>Total</b>                            | <b>128,459</b> | <b>112,780</b> |

- 1) The agreements are financial lease agreements where Nordea is the lessor. The associated assets are Loans to the public.  
 2) Relates only to securities recognised in the balance sheet. Securities borrowed or bought under reverse repurchase agreements are not recognised in the balance sheet and thus not included in the amount. Such transactions are disclosed in Note G44, Obtained collaterals which are permitted to be sold or repledged.  
 3) The comparative figures for 2010 have been restated to ensure consistency between years.

Assets pledged for own liabilities contain securities pledged as security in repurchase agreement and in securities lending. The transactions are conducted under standard agreements employed by financial markets participants. Counterparts in those transactions are credit institutions and the public. The transactions are typically short term with maturity within three months.

Securities in the Life operations are also pledged as security for the corresponding insurance liabilities.

Loans to the public have been registered as collateral for issued covered bonds and mortgage bonds in line with local legislation. In the event of the company's insolvency, the holders of these bonds have priority to the assets registered as collateral.

Other relates to certificate of deposits pledged by Nordea to comply with authority requirements and assets funded by finance lease agreements.

## G38

| Documentary credits          | 2,626          | 2,515          |
| Other contingent liabilities | 215            | 158            |
| <b>Total</b>                 | <b>24,468</b>  | <b>23,963</b>  |

In the normal business of Nordea, the bank issues various forms of guarantees in favour of the bank's customers. Loan guarantees are given for customers to guarantee obligations in other credit- and pension institutions. Other guarantees consist mainly of commercial guarantees such as bid guarantees, advance payment guarantees, warranty guarantees and export related guarantees. Contingent liabilities also include unutilised irrevocable import documentary credits and confirmed export documentary credits. These transactions are part of the bank services and support the bank's customers. Guarantees and documentary credits are off-balance sheet items, unless there is a need for a provision to cover a probable loan loss that arises from the judgement that reimbursement will not be received.

Nordea Bank AB (publ) has issued a guarantee covering all commitments in Nordea Investment Management AB, org no 556060-2301 and Nordea Fastigheter AB, org no 556021-4917.

Nordea Bank AB (publ) has undertaken, in relation to certain individuals and on certain conditions, to be responsible for the potential payment liability against them in their capacity as managing directors or board member in subsidiaries to Nordea Bank AB (publ).

A limited number of employees are entitled to severance pay if they are dismissed before reaching their normal retirement age. For further disclosures, see Note G7.

## Legal proceedings

Within the framework of the normal business operations, the Group faces a number of claims in civil lawsuits and disputes, most of which involve relatively limited amounts. Presently none of the current disputes is considered likely to have any significant adverse effect on the Group or its financial position.

## G37

## Other assets pledged

| EURm                                    | 31 Dec<br>2011 | 31 Dec<br>2010 |

| <b>Total</b>                    | <b>86,970</b>  | <b>91,426</b>               |

1) Including unutilised portion of approved overdraft facilities of EUR 47,607m (EUR 50,522m).

2) The comparative figures for 2010 have been restated to ensure consistency between the years.

Reverse repurchase agreements are recognised on and derecognised from the balance sheet on settlement date. Nordea has as per 31 December 2011 signed reverse repurchase agreements that have not yet been settled and consequently are not recognised on the balance sheet. On settlement date these reverse repurchase agreements will, to the utmost extent, replace existing reverse repurchase agreements not yet derecognised as per 31 December 2011. The net impact on the balance sheet is minor. These instruments have not been disclosed as commitments.

For information about derivatives, see Note G18 and about reverse repos, see Note G44.

More Capital Adequacy information can be found in the Risk, Liquidity and Capital management section page 67.

Generally, Nordea Group has the ability to transfer capital within its legal entities without material restrictions. International transfers of capital between legal entities are normally possible after approval by of the local regulator and

are of importance when governing the capital position within the Group. The guarantee schemes introduced within EU during 2008 has under certain circumstances limited the transferability of capital with impact on crossborder financial groups. There are no such restrictions directly affecting Nordea as per end of 2011.

## Financial liabilities designated at fair value through profit or loss

## Changes in fair values attributable to changes in credit risk

The financial liabilities designated at fair value through profit or loss are issued bonds in the Danish subsidiary Nordea Kredit Realkreditaktieselskab, EUR 31,756m (EUR 30,963m), the funding of the Markets operation, EUR 19,852m (EUR 17,665m) and investment contracts in Life, EUR 10,226m (EUR 9,339m). The funding of Markets is generally of such a short term nature that the effect of changes in own credit risk is not significant. The value of the investment contracts in Life is directly linked to the assets in the contracts and there is consequently no effect from changes in own credit risk in these contracts.

The fair value of bonds issued by Nordea Kredit Realkreditaktieselskab decreased by EUR 210m (decreased EUR 289m) in 2011 due to changes in own credit risk. The cumulative change since designation is a decrease of EUR 718m (decrease EUR 508m). The calculation method of the fair value changes attributable to changes in market conditions are based on relevant benchmark interest rates, which are the average yields on Danish and German (EUR) government bonds. For the issued mortgage bonds a change in the liability's credit risk and price will have a corresponding effect on the value of the loans. The reason is that a change in the price of the bonds will be offset by the opposite change in the value of the prepayment option of the loan.

## Comparison of carrying amount and contractual amount to be paid at maturity

| 2011, EURm                                                            | Carrying amount | Amount to be paid at maturity |
|-----------------------------------------------------------------------|-----------------|-------------------------------|
| Financial liabilities designated at fair value through profit or loss | 45,641          | 44,225                        |

| 2010, EURm                                                            | Carrying amount | Amount to be paid at maturity |
|-----------------------------------------------------------------------|-----------------|-------------------------------|
| Financial liabilities designated at fair value through profit or loss | 57,967          | 57,954                        |

Liabilities to policyholders have no fixed maturities and there is no fixed amount to be paid. The amount disclosed to be paid at maturity has been set to the carrying amount.

## G43

## Assets and liabilities at fair value, cont.

**Estimation of fair value for assets and liabilities**

Financial assets and financial liabilities in the balance sheet are generally measured at fair value, with the exception of loans, deposits and borrowings and issued securities.

The carrying amounts on loans, deposits and borrowings and issued securities are adjusted for the value of the fixed interest term, unless the interest risk is hedged, in order to estimate the fair values that are presented in the tables above. The value of the fixed interest term is a result of changes in the relevant market interest rates. The discount rates used are based on current market rates for each term. The fair value of the hedged interest rate risk is included in the balance sheet item "Fair value changes of the hedged items in portfolio hedge of interest rate risk".

Fair value is estimated to be equal to the carrying amount for short-term financial assets and financial liabilities. The carrying amount is a reasonable approximation of fair value due to limited credit risk and short time to maturity.

Fair value is set to carrying amount, in the tables above, for assets and liabilities for which no reliable fair value has been possible to estimate. This is valid for the line items investments in associated undertakings, investments in group undertakings, intangible assets, property and equipment and provisions.

Nordea holds very limited amounts of financial instruments with discretionary participating features in the Life business, which are recognised in the balance sheet in the line "Liabilities to policyholders". These instruments can not be reliably measured at fair value and consequently the fair value for these instruments are set to carrying amount.

Nordea holds very limited amounts of equity instruments measured at cost. Fair value is set to carrying amount for these instruments as the fair value can not be measured reliably.

For further information about valuation of items normally measured at fair value, see Note G1.

**Deferred Day 1 profit or loss**

In accordance with the Group's accounting policy as described in Note G1, if there are significant unobservable inputs used in the valuation technique, the financial instrument is recognised at the transaction price and any trade date profit is deferred. The table below shows the aggregate difference yet to be recognised in the income statement at the beginning and end of the period and a reconciliation of changes in the balance of this difference (movement of deferred Day 1 profit or loss).

| EURm                                               | 31 Dec<br>2011 | 31 Dec<br>2010 |

**Determination of fair value from quoted market prices or valuation techniques**

Fair value measurements are categorised using a fair value hierarchy. The financial instruments carried at fair value have been categorised under the three levels of the IFRS fair value hierarchy that reflects the significance of inputs. The categorisation of these instruments is based on the lowest level input that is significant to the fair value measurement in its entirety. To categorise the instruments into the three levels, the relevant pricing models for each product is considered in combination with used input market data, the significance of derived input data, the complexity of the model and the accessible pricing data to verify model input. Although the complexity of the model is considered, a high complexity does not by default require that products are categorised into level 3. It is the use of model parameters and the extent of unobservability that defines the fair value hierarchy levels.

For bonds the categorisation into the three levels is based on the internal pricing methodology. The bonds can either be directly quoted in active markets (level 1) or measured using a methodology giving a quote based on observable inputs (level 2). Level 3 bonds are characterised by illiquidity.

Valuation of Private Equity Funds (PEF) and unlisted equities will in nature be more uncertain than valuations of more actively traded equity instruments. Emphasis is put on using a consistent approach across all assets and over time. The methods are consistent with the guideline "International Private Equity and Venture Capital Valuation Guidelines" issued by EVCA (European Venture Capital Association). The EVCA guidelines are considered as best practice in the PEF industry. For US based funds, similar methods are applied.

Level 1 consists of financial assets and financial liabilities valued using unadjusted quoted prices in active markets for identical assets or liabilities. An active market for the asset or liability is a market in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis. This category includes listed derivatives, listed equities, government bonds in developed countries, and most liquid mortgage bonds and corporate bonds where direct tradable price quotes exists.

Level 2 consists of financial assets and financial liabilities which do not have directly quoted market prices available from an active market. The fair values are estimated using a valuation technique or valuation model based on market prices or rates prevailing at the balance sheet date and any unobservable inputs are insignificant in the fair values. This is the case for the majority of Nordea's OTC derivatives, securities purchased/sold under resale/repurchase agreements, securities borrowed/loaned and other instruments where an active market supplies the input to the valuation technique or model.

Level 3 consists of those types of financial instruments which fair values cannot be obtained directly from quoted market prices or indirectly using valuation techniques or models supported by observable market prices or rates. This is generally the case for investments in unlisted securities, private equity funds, hedge funds, and both more complex or less active markets supplying input to the technique or model for OTC derivatives, certain complex or structured financial instruments such as CLNs and CDOs, and illiquid bonds.

The following table presents the valuation methods used to determine fair values of financial instruments carried at fair value.

1) Of which EUR 12,474m Treasury bills and EUR 53,720m Interest-bearing securities (the portion held at fair value in Note G42). EUR 8,974m relates to the balance sheet item Financial instruments pledged as collateral.

2) EUR 520m relates to the balance sheet item Financial instruments pledged as collateral.

## G43

## Assets and liabilities at fair value, cont

**Transfers between level 1 and 2**

During the year, Nordea Group transferred debt securities of EUR 3,057m (EUR 31m) from level 1 to level 2 and EUR 496m (EUR 949m) from level 2 to level 1 of the fair value hierarchy for financial assets and liabilities at fair value. The reason for transfers from level 1 to level 2 was that the

instruments ceased to be actively traded during the year and fair values have now been obtained using valuation techniques with observable market inputs. The reason for transfers from level 2 to level 1 was that the instruments have again been actively traded during the year and reliable quoted prices are obtained in the markets.

**Movements in level 3**

The following table shows a reconciliation of the opening and closing carrying amounts of level 3 financial assets and liabilities recognised at fair value.

1) Relates to those assets and liabilities held at the end of the reporting period.

Fair value gains/losses recognised in the income statement during the year are included in “Net result from items at fair value” (see Note G5).

## G43

## Assets and liabilities at fair value, cont

**Sensitivity of level 3 financial instruments measured at fair value to changes in key assumptions**

Included in the fair value of financial instruments carried at fair value on the balance sheet are those estimated in full or in part using valuation techniques based on assumptions that are not supported by market observable prices or rates. There may be uncertainty about a valuation, resulting from the choice of valuation technique or model used, the assumptions embedded in those models, the extent to which inputs are not market observable, or as a result of other elements affecting the valuation technique. Portfolio adjustments are applied to reflect such uncertainties and are deducted from the fair values produced by the models or other valuation techniques (for further information see Note G1 section 11 "Determination of fair value of financial instruments").

This disclosure shows the potential impact from the relative uncertainty in the fair value of financial instruments for which the valuation is dependent on unobservable input parameters. The estimates disclosed below are likely to be greater than the true uncertainty in fair value of these instruments, as it is unlikely in practice that all unobservable parameters would be simultaneously at the extremes of their ranges of reasonably possible alternatives. The disclosure is neither predictive nor indicative of future movements in fair value.

The following table shows the sensitivity of the fair value of level 3 instruments to changes in key assumptions, by class of instruments. Where the exposure to an unobservable parameter is offset across different instruments only the net impact is disclosed in the table.

| 31 Dec 2011, EURm        | Carrying amount | Effect of reasonably possible alternative assumptions |              |
|--------------------------|-----------------|-------------------------------------------------------|--------------|
|                          |                 | Favourable                                            | Unfavourable |
| Debt securities          | 1,149           | 58                                                    | -58          |
| – of which Life          | 750             | 28                                                    | -28          |
| Shares                   | 4,921           | 444                                                   | -444         |
| – of which Life          | 3,425           | 342                                                   | -342         |

| <b>31 Dec 2010, EURm</b> |                 |                                                       |              |
| Debt securities          | 1,848           | 92                                                    | -92          |
| – of which Life          | 1,787           | 89                                                    | -89          |
| Shares                   | 4,237           | 389                                                   | -389         |
| – of which Life          | 2,425           | 242                                                   | -242         |
| Derivatives              | -65             | 22                                                    | -29          |

In order to calculate the effect on level 3 fair values, from altering the assumptions of the valuation technique or model, the sensitivity to unobservable input data is assessed. For the derivatives portfolio key inputs, that are based on pricing model assumptions or unobservability of market data inputs, are replaced by alternative estimates or assumptions and the impact on the valuation computed. The majority of the effect

on the derivatives is related to various types of correlations or correlation related inputs in credit derivatives, in interest rate OTC derivatives or OTC structured equity derivatives. For the level 3 portfolios of shares and debt securities the fair value was increased and decreased within a range of 3–10 percentage units, which are assessed to be reasonable changes in market movements.

## G44

**Obtained collaterals which are permitted to be sold or repledged**

Nordea obtains collaterals under reverse repurchase and securities borrowing agreements which, under the terms of the agreements, can be sold or repledged. The transactions are conducted under standard agreements employed by financial markets participants. Generally, the agreements require additional collateral to be provided if the value of the securities falls below a predetermined level. Under standard terms for most repurchase transactions, the recipient of collateral has an unrestricted right to sell or repledge it, subject to returning equivalent securities on settlement of the transactions. The fair value of the securities obtained as collateral under reverse repurchase and securities borrowing agreements are disclosed below.

## G46

## Maturity analysis for assets and liabilities, cont.

The table is based on contractual maturities for on balance sheet financial instruments. For derivatives, the expected cash inflows and outflows are disclosed for both derivative assets and derivative liabilities, as derivatives are managed on a net basis. In addition to the on balance sheet and derivative instruments, Nordea has credit commitments amounting

to EUR 85,319m (EUR 88,740m), which could be drawn on at any time. Nordea has also issued guarantees of EUR 21,627m (EUR 21,290m) which may lead to future cash outflows if certain events occur. For further information about remaining maturity, see also the section of Risk, Liquidity and Capital management.

| <b>Net interest income and expense</b>      | <b>7</b>                | <b>5</b> | <b>0</b>                           | <b>0</b> |

1) Shareholders with significant influence and companies significantly influenced by key management personnel in Nordea Group as well as companies significantly influenced by close family members to these key management personnel are considered to be related parties to Nordea. Included in this group of related parties are Sampo Oyj, PostNord AB, Danisco A/S, Svenska Försäkringskapital AB and Tryg A/S. Transactions with related companies, that are made in Nordea's and the related companies' ordinary course of business and on the same criteria and terms as those for comparable transactions with companies of similar standing, are not included in the table.

2) Including nominal values on derivatives.

### Compensation and loans to key management personnel

Compensation and loans to key management personnel are specified in Note G7.

### Other related-party transactions

Starting in March 2008 Nordea takes part in a guarantee consortium to support Norwegian Eksportfinans ASA in relation to its securities portfolio. Nordea owns 23% of the company with other owners being the Norwegian state and other Nordic banks. Nordea's share of the negative fair value of the contract as of the balance sheet date amounts to approx. EUR 29m. The agreement's expiring date corresponds with the maturity dates of the bonds included in the guarantee. The latest maturity is on 31 December 2023.

In 2009 Nordea entered into one transaction with a company under significant influence by a member of key management personnel, which is disclosed separately in this note due to the transaction's significance for the related company. The related company has a credit limit of EUR 26m, of which EUR 12m was utilised as of 31 December 2011. The latest maturity is 30 June 2012, with the possibility of yearly prolongation after a new credit review. Nordea has collateral in securities (shares) corresponding to 200 percent of the utilised credit limit. The transaction is made on the same criteria and terms as those for comparable transactions with companies of similar standing.

## G48

## Credit risk disclosures

Credit risk management and credit risk analysis are described in the Risk, Liquidity and Capital management section of the Board of Directors' Report. Additional information on credit risk is also disclosed in the Capital and Risk management Report (Pillar III) 2011, which is available on [www.nordea.com](http://www.nordea.com). Much of the information in this note is collected from the Pillar III report in order to fulfil the disclosure requirement regarding credit risk in the Annual report.

The Pillar III report contains the disclosures required by the Capital Requirements Directive (CRD), which is based on the Basel II framework. The Pillar III disclosure is aligned to how Nordea manages credit risk and is believed to be the best way to explain the credit risk exposures in Nordea. Credit risk exposures occur in different forms and are divided into the following types:

| Exposure types, EURm             | 31 Dec 2011    | 31 Dec 2010    |
|----------------------------------|----------------|----------------|
| On-balance sheet items           | 419,603        | 369,839        |
| Off-balance sheet items          | 51,719         | 57,887         |
| Securities financing             | 2,084          | 1,197          |
| Derivatives                      | 42,959         | 28,174         |
| <b>Exposure At Default (EAD)</b> | <b>516,365</b> | <b>457,097</b> |

Tables presented in this note, containing exposure, are presented as Exposure At Default (EAD). EAD is the exposure after applying credit conversion factors (CCF).

#### Reconciliation of exposure types to the balance sheet

The CRD concept of EAD is different from the accounting framework. The tables below show reconciliations from the recognised amount in the accounts to EAD. Capital requirement for credit risk is only calculated for the banking book. The counterparty risk from derivatives and repos are included in the credit exposure, while assets related to the trading book are included in market risk. Assets in the Life operations are not part of the capital requirement calculation and consequently not included in the trading or banking books. The table below shows the reconciliation of the balance sheet assets to the EAD for credit risk. Assets outside the banking book contains credit risk, but from a CRD perspective these assets are measured in other risk classes.

#### On-balance sheet items

| 31 Dec 2011, EURm                                                         | Original exposure | Items related to market risk | Repos, derivatives, securities lending | Life insurance operations | Other        | Balance sheet  |

#### Exposure at default<sup>2</sup>

1) Derivatives are included in banking and trading books, but not at book values. Counterparty risk in trading derivatives are included in the credit risk.

2) The on-balance exposure have a CCF of 100% but can still have a lower EAD due to provisions in the standardised approach, that are deducted from the original exposure when calculating EAD.

1) First-to-Default swaps are not classified as CDOs and are therefore not included in the table. Net bought protection amounts to EUR 218m (EUR 71m) and net sold protection to EUR 53m (EUR 80m). Both bought and sold protection are, to the predominant part, investment grade.

2) Net exposure disregards exposure where tranches are completely identical in terms of reference pool attachment, detachment, maturity and currency.

3) Of which investment grade EUR 181m (EUR 209m) and sub investment grade EUR 0m (EUR 4m).

4) Of which investment grade EUR 1,279m (EUR 1,497m) and sub investment grade EUR 22m (EUR 22m) and not rated EUR 167m (EUR 158m).

## G48

## Credit risk disclosures, cont.

When Nordea sells protection in a CDO transaction, Nordea carries the risk of losses in the reference portfolio on the occurrence of a credit event. When Nordea buys protection in a CDO transaction, any losses in the reference portfolio, in which Nordea has not necessarily invested, triggered by a credit event is then carried by the seller of protection.

The risk from CDOs is hedged with a portfolio of CDSs. The risk positions are subject to various types of market risk limits, including VaR, and the CDO valuations are subject to fair value adjustments for model risk. These fair value adjustments are recognised in the income statement.

## Restructured loans and receivables current year

1) In accordance with Nordea's policy for taking over assets for protection of claims, which is in compliance with the local Banking Business Acts, wherever Nordea is located. Assets, used as collateral for the loan, are generally taken over when the customer is not able to fulfil its obligations to Nordea. The assets taken over are, at the latest, disposed when full recovery is reached.

1) Apart from retained earnings, unrestricted equity consists of a free fund to the amount of EUR 2,762m (31 Dec 2010: EUR 2,762m).

2) Refers to the Long Term Incentive Programme (LTIP). LTIP 2011 was hedged by issuing 4,730,000 C-shares (LTIP 2010 5,125,000), the shares have been bought back and converted to ordinary shares. The total holding of own shares related to LTIP is 18.2 million (31 Dec 2010 15.4 million).

3) In connection to the rights issue in 2009 an assessment was made on the VAT Nordea would have to pay on the transaction costs. This assessment has been changed in 2011 based on new tax law.

Description of items in equity is included in Note G1 Accounting policies.

**Dividends per share**

Final dividends are not accounted for until they have been ratified at the Annual General Meeting (AGM). At the AGM on 22 March 2012, a dividend in respect of 2011 of EUR 0.26 per share (2010 actual dividend EUR 0.29 per share) amount-

ing to a total of EUR 1,047,546,038 (2010 actual: EUR 1,167,867,606) is to be proposed. The financial statements for the year ended 31 December 2011 do not reflect this resolution, which will be accounted for in equity as an appropriation of retained earnings in the year ending 31 December 2012.

### Comments on the cash flow statement

The cash flow statement has been prepared in accordance with IAS 7. The cash flow statement shows inflows and outflows of cash and cash equivalents during the year. Nordea's cash flow has been prepared in accordance with the indirect method, whereby operating profit is adjusted for effects of non-cash transactions such as depreciation and loan losses. The cash flows are classified by operating, investing and financing activities.

### Operating activities

Operating activities are the principal revenue-producing activities and cash flows are mainly derived from the operating profit for the year with adjustment for items not included in cash flow and income taxes paid. Adjustment for non-cash items includes:

| Change in fair value of the hedged items, assets/liabilities (net) | 962           | 26            |
| Other                                                              | 12            | -66           |
| <b>Total</b>                                                       | <b>-1,109</b> | <b>-1,344</b> |

Changes in operating assets and liabilities consist of assets and liabilities that are part of normal business activities, such as loans, deposits and debt securities in issue. Changes in derivatives are reported net.

Cash flow from operating activities includes interest payments received and interest expenses paid with the following amounts:

| EURm                       | 2011  | 2010  |
|----------------------------|-------|-------|
| Interest payments received | 2,502 | 1,558 |
| Interest expenses paid     | 1,820 | 905   |

### Investing activities

Investing activities include acquisitions and disposals of non-current assets, like property and equipment, intangible and financial assets.

### Financing activities

Financing activities are activities that result in changes in equity and subordinated liabilities, such as new issues of shares, dividends and issued/amortised subordinated liabilities.

### Cash and cash equivalents

The following items are included in Cash and cash equivalents:

| EURm                                            | 31 Dec 2011  | 31 Dec 2010  |
|-------------------------------------------------|--------------|--------------|
| Cash and balances with central banks            | 152          | 182          |
| Loans to credit institutions, payable on demand | 7,900        | 5,317        |
|                                                 | <b>8,052</b> | <b>5,499</b> |

Cash comprises legal tender and bank notes in foreign currencies. Balances with central banks consist of deposits in accounts with central banks and postal giro systems under government authority, where the following conditions are fulfilled;

- the central bank or the postal giro system is domiciled in the country where the institution is established
- the balance on the account is readily available any time.

Loans to credit institutions, payable on demand include liquid assets not represented by bonds or other interest-bearing securities.

# 5 year overview, Parent company

## P1

## Accounting policies

**1. Basis for presentation**

The financial statements for the parent company, Nordea Bank AB (publ), are prepared in accordance with the Swedish Annual Accounts Act for Credit Institutions and Securities Companies (1995:1559) and IFRS with the amendments and exceptions following the recommendation RFR 2 "Accounting for Legal Entities" issued by the Swedish Financial Reporting Board and the accounting regulations of the Swedish Financial Supervisory Authority (FFFS 2008:25, with amendments in FFS 2009:11 and 2011:54). Under RFR 2, the parent company shall apply all standards and interpretations issued by the IASB and IFRS IC to the extent possible within the framework of Swedish accounting legislation and considering the close tie between financial reporting and taxation. The recommendation sets out the exceptions and amendments compared to IFRS.

The Group's accounting policies described in Note G1 "Accounting policies" are applicable also for the parent company, considering also the information provided below.

**Changed accounting policies and presentation**

The accounting policies, basis for calculations and presentation are, in all material aspects, unchanged in comparison with the 2010 Annual Report, except for the categorisation of lending related commissions within "Net fee and commission income" and the accounting for group contributions.

More information on other changes in IFRSs implemented in 2011, which have not had any significant impact on the parent company, as well as on forthcoming changes in IFRSs not yet implemented by Nordea, can be found in section 2 "Changed accounting policies and presentation" and section 3 "Changes in IFRSs not yet effective for Nordea" respectively in Note G1 "Accounting policies". The conclusions within these sections are, where applicable, relevant also for the parent company.

**Categorisation of lending related commissions**

The categorisation of lending related commissions within "Net fee and commission income" (Note P4) has been changed, in order to be better aligned with the purpose for which the fees are received. The change mainly relates to syndicated transactions. The comparable figures have been restated accordingly and the impact is disclosed in the below table.

| EURm                    | 2010       |            |
|-------------------------|------------|------------|
|                         | New policy | Old policy |
| Lending                 | 151        | 97         |
| Other commission income | 42         | 96         |

**Accounting for group contributions**

The accounting for group contribution has been changed as a result of the withdrawal of UFR 2 "Group contributions and shareholders' contributions", issued by the Swedish Financial Reporting Board. Previously, group contributions paid or received for the purpose of optimising the tax expense were reported as a decrease/increase of unrestricted equity (after adjustment for tax), through other comprehensive income. Group contributions regarded as substitutes for dividends were accounted for as dividends.

As from 2011 group contributions paid to subsidiaries are recognised as an increase in the value of investments in group undertakings, net of tax. Group contributions received from subsidiaries are recognised as dividends. The possible

tax effects on group contributions received are classified as "Income tax expense" in the income statement. The comparable figures have been restated accordingly and the impact is disclosed in the below table.

| EURm                              | 2011       |            | 2010       |            |
|-----------------------------------|------------|------------|------------|------------|
|                                   | New policy | Old policy | New policy | Old policy |
| Investments in group undertakings | 16,713     | 16,604     | 16,690     | 16,607     |
| Retained earnings                 | 11,807     | 11,698     | 11,471     | 11,388     |
| Other comprehensive income        | -14        | -40        | 2          | -81        |

**Accounting policies applicable for the parent company only****Investments in group undertakings and associated undertakings**

The parent company's investments in subsidiaries and associated companies are recognised under the cost model. Impairment tests are performed according to IAS 36 "Impairment of Assets". At each balance sheet date, all shares in subsidiaries and associated companies are reviewed for indications of impairment. If such indication exists, an analysis is performed to assess whether the carrying amount of each holding of shares is fully recoverable. The recoverable amount is the higher of fair value less costs to sell and the value in use. Any impairment charge is calculated as the difference between the carrying amount and the recoverable amount and is classified as "Impairment of securities held as financial non-current assets" in the income statement.

**Dividends**

Dividends paid to the shareholders of Nordea Bank AB (publ) are recorded as a liability following the approval of the Annual General Meeting.

Dividends paid by group undertakings to the parent company are anticipated if the parent alone can decide on the size of the dividend and if the formal decision has been made before the financial report is published. Dividends from group- and associated undertakings are recognised on the separate income line "Dividends".

**Differences compared to IFRS**

The accounting principles applied differ from IFRS mainly in the following aspects:

**Amortisation of goodwill**

Under IAS 38, goodwill and other intangible assets with indefinite useful lives are not amortised in the consolidated financial statements. In the parent company financial statements goodwill is amortised as any other intangible asset in accordance with the rules set out in the Swedish Annual Accounts Act for Credit Institutions and Securities Companies (1995:1559), i.e. normally over a period of five years unless, under exceptional circumstances, a longer amortisation period is justified.

**Functional currency**

The functional and presentation currency of Nordea Bank AB (publ) is EUR. All transactions in other currencies are converted to EUR in accordance with the policies disclosed in section 9 "Translation of assets and liabilities denominated in foreign currencies" in note G1 "Accounting policies".

## P1

## Accounting policies, cont.

**Pensions**

The accounting principle for defined benefit obligations follows the Swedish rules ("Tryggandelagen") and the regulations of the Swedish Financial Supervisory Authority as this is the condition for tax deductibility. The significant differences compared with IAS 19 consist of how the discount rate is determined, that the calculation of the defined benefit obligation is based on current salary level without assumptions about future salary increases and that all actuarial gains and losses are recognised in the income statement when they occur.

In Sweden, actuarial pension commitments are guaranteed by a pension foundation or recognised as a liability. No net defined benefit assets are recognised. The pension cost in the parent company, classified as "Staff cost" in the income state-

ment, consists of changes in recognised pension provisions (including special wage tax) for active employees, pension benefits paid, contributions made to or received from the pension foundation and related special wage tax.

**Group contributions**

See section "Changed accounting policies and presentation", sub-section "Accounting for group contributions".

**Untaxed reserves**

The parent company reports untaxed reserves, related to accelerated depreciation under tax regulations, including the deferred tax component. In the consolidated financial statements, untaxed reserves are split on the items "Retained earnings" and "Deferred tax liabilities" in the balance sheet.

| <b>Total</b>                     | <b>-110</b> | <b>-120</b> |

1) Pension costs for executives, see Note G7.

**Additional disclosures on remuneration under Nordic FSAs' regulations and general guidelines**

The qualitative disclosures under these regulations can be found in the separate section on remuneration in the Board of Directors' Report, while the quantitative disclosures will be published in a separate report on Nordea's homepage ([www.nordea.com](http://www.nordea.com)) in due time before the Annual General Meeting 2012.

**Compensation to key management personnel**

Salaries and remuneration to the Board of Directors, CEO and Group Executive Management, see Note G7.

**Loans to key management personnel**

Loans to key management personnel amounts to EUR 0m (EUR 0m). Interest income on these loans amounts to EUR 0m (EUR 0m). For information about loan conditions, see Note G7.

**Long Term Incentive Programmes**

Participation in the Long Term Incentive Programmes (LTIPs) requires that the participants take direct ownership by investing in Nordea shares. For more information about conditions and requirements, see Note G7.

For information on number of outstanding conditional rights in the LTIPs, see note G7. All rights in the LTIPs, both to employees in the parent company as well as to employees in subsidiaries, are issued by Nordea Bank AB (publ).

The expenses in below table regards only employees in Nordea Bank AB (publ).

**Expenses<sup>1</sup>**

| EURm               | LTIP 2011 | LTIP 2010 | LTIP 2009 | LTIP 2008 | LTIP 2007 |
|--------------------|-----------|-----------|-----------|-----------|-----------|
| Expected expense   | -6        | -3        | -4        | -3        | -4        |
| Maximum expense    | -10       | -7        | -4        | -3        | -4        |
| Total expense 2011 | -1        | -1        | -1        | —         | —         |
| Total expense 2010 | —         | -1        | -3        | -2        | —         |

1) All amounts excluding social charges.

When calculating the expected expense an expected annual employee turnover of 5% has been used in LTIP 2011. The expected expense is recognised over the vesting period of 36 months (LTIP 2011 and 2010) and 24 months (LTIP 2009, 2008 and 2007).

**Cash-settled share-based payment transaction**

Nordea operates share-linked deferrals on parts of variable compensation for certain employee categories, indexed with Nordea Total Shareholder Returns (TSR) and either vesting after three years or vesting in equal instalments over a three to five year period. Since 2011 Nordea also operates TSR-linked retention on part of variable compensation for certain employee categories. The below table only includes deferred amounts indexed with Nordea TSR. Nordea also operates deferrals not being TSR-linked, which are not included in the table below. Further information regarding all deferred amounts can be found in the separate report on remuneration published on Nordea's homepage.

| EURm                                                                           | 2011     | 2010     |
|--------------------------------------------------------------------------------|----------|----------|
| Deferred TSR-linked compensation at beginning of the year                      | 2        | 0        |
| Accrued deferred/retained TSR-linked compensation during the year <sup>1</sup> | 0        | 2        |
| TSR indexation during the year                                                 | 0        | 0        |
| Payments during the year <sup>2</sup>                                          | -1       | 0        |
| Translation differences                                                        | 0        | 0        |
| <b>Deferred TSR-linked compensation at end of year</b>                         | <b>1</b> | <b>2</b> |

1) Of which EUR 1m is available for disposal by the employees in 2012. Additional deferrals not being TSR-linked amount to EUR 3m (EUR 0m). Due to that the allocation of variable compensation is not finally decided during the current year, the deferred amount during the year relates to variable compensation earned the previous year.

2) There have been no adjustments due to forfeitures in 2011.

## P17

## Financial instruments pledged as collateral

## Financial instruments pledged as collateral

In repurchase transactions and in securities lending transactions, non-cash assets are transferred as collateral. When the counterpart receiving the collateral has the right to sell or repledge the assets, the assets are reclassified in the balance sheet to the item Financial instruments pledged as collateral.

| EURm                        | 31 Dec 2011  | 31 Dec 2010  |
|-----------------------------|--------------|--------------|
| Treasury bills              | 1,237        | 6,103        |
| Interest-bearing securities | —            | 57           |
| <b>Total</b>                | <b>1,237</b> | <b>6,160</b> |

## Transferred assets that are still recognised in the balance sheet and associated liabilities

All assets transferred and the liabilities associated with these transactions are specified in the following tables. The assets continue to be recognised on the balance sheet since Nordea is still exposed to changes in the fair value of the assets. Therefore, these assets and its associated liabilities are included in the tables below.

## P20

## Fair value changes of the hedged items in portfolio hedge of interest rate risk

| Assets<br>EURm                        | 31 Dec<br>2011 | 31 Dec<br>2010 |
|---------------------------------------|----------------|----------------|
| Carrying amount at beginning of year  | 795            | 332            |
| Changes during the year               |                |                |
| Revaluation of hedged items           | -1,427         | 463            |
| <b>Carrying amount at end of year</b> | <b>-632</b>    | <b>795</b>     |
| <b>Liabilities</b>                    |                |                |
| <b>EURm</b>                           |                |                |
| Carrying amount at beginning of year  | 749            | 285            |
| Changes during the year               |                |                |
| Revaluation of hedged items           | -602           | 464            |
| <b>Carrying amount at end of year</b> | <b>147</b>     | <b>749</b>     |

The carrying amount at end of year represents accumulated changes in the fair value for those repricing time periods in which the hedged item is an asset respectively a liability. When the hedged item is an asset, the change in the fair value of the hedged item is presented within assets and when the hedged item is a liability, the change is presented as a liability.

1) The Viking ABCP Conduit (Viking) has been established with the purpose of supporting trade receivable or accounts payable securitisations to core Nordic customers. The SPEs purchase trade receivables from the approved sellers and fund the purchases either by issuing Commercial Papers (CP) via the established Asset Backed Commercial Papers programme or by drawing funds on the liquidity facilities available. Nordea has provided liquidity facilities of maximum EUR 1,443m and at year end 2011 EUR 1,092m were utilised. There is no outstanding CP issue at year end 2011. These SPEs are consolidated as they are closely linked to the activities within Nordea. Also, Nordea is exposed to credit risk through the liquidity facility. There are no significant restriction on repayment of loans from Viking apart from that the payments are dependant on the pace in which Viking realises its assets.

2) Collateralised Mortgage Obligations Denmark A/S (CMO Denmark A/S) was established with the purpose to issue CMOs in order to meet specific customer preferences in terms of credit risk, interest rate risk, prepayment risk, maturity etc. The SPE purchased a pool of mortgage bonds and reallocated the risks through tranching a similar bond issue (CMOs). At year end 2011 the total notional of outstanding bonds were EUR 2m available to investors. Nordea holds bonds issued by CMO Denmark A/S as part of offering a secondary market for the bonds. The investment amounted to EUR 2m as of year end 2011.

3) Kalmar Structured Finance A/S was established to allow customers to invest in structured products in the global credit markets. The SPE enters into Credit Default Swaps (CDS) and hereby acquires a credit risk on an underlying portfolio of names (like corporate names) and at the same time the SPE issues Credit Linked Notes (CLN) with a similar credit risk that reflects the terms in the CDSs. Nordea is the counterpart in the derivative transactions. The total notional of outstanding CLNs in this category was EUR 24m at year end 2011. Nordea holds CLNs issued by the SPE as part of offering a secondary market for the notes. The investment amounted to EUR 2m at year end 2011.

Provision for restructuring costs amounts to EUR 44m and relates mainly to New Normal. For further information about New Normal, see Note G33. Provision for transfer risk is related to off-balance sheet items. Transfer risk relating to loans is included in the item Allowances for collectively

assessed impaired loans in Note P15. Provision for transfer risk is depending on the volume of business with different countries. Loan loss provisions for guarantees amounts to EUR 1m. Other provision of EUR 43m relates to state guarantees.

## P33

## Retirement benefit obligations

## Pension provisions

The pension liabilities of Nordea Bank AB (publ) are mainly covered by allocations to its pension foundation.

The provisions in the balance sheet pertain almost exclusively to former employees of Postgirot Bank. EUR 127m (EUR 125m) of the provisions are covered by "Tryggandelagen".

A small percentage of the pension obligations are covered by insurance policies.

The following figures are based on calculations in accordance with Swedish rules ("Tryggandelagen").

## Specification of amounts recognised in the balance sheet

|                                                                                   | 31 Dec<br>2011 | 31 Dec<br>2010 |

| <b>Total</b>                              | <b>3,530</b>   | <b>6,843</b>   |

**The above pledges pertain to the following liabilities**

|                                         |              |              |
|-----------------------------------------|--------------|--------------|
| Deposits by credit institutions         | 3,432        | 6,700        |
| Deposits and borrowings from the public | 489          | 290          |
| <b>Total</b>                            | <b>3,921</b> | <b>6,990</b> |

1) Relates only to securities recognised in the balance sheet. Securities borrowed or bought under reverse repurchase agreements are not recognised in the balance sheet and thus not included in the amount. Such transactions are disclosed in Note P44. Obtained collaterals which are permitted to be sold or repledged.

Assets pledged for own liabilities contain securities pledged as security in repurchase agreement and in securities lending. The transactions are conducted under standard agreements employed by financial markets participants. Counterparts in those transactions are credit institutions and the public. The transactions are typically short term with maturity within three months.

## P37

## Other assets pledged

| EURm                                    | 31 Dec<br>2011 | 31 Dec<br>2010 |

In the normal business of Nordea, the bank issues various forms of guarantees in favour of the bank's customers. Loan guarantees are given for customers to guarantee obligations in other credit- and pension institutions. Other guarantees consist mainly of commercial guarantees such as bid guarantees, advance payment guarantees, warranty guarantees and export related guarantees.

Nordea Bank AB (publ) has issued a guarantee covering all commitments in Nordea Investment Management AB, org no 556060-2301 and Nordea Fastigheter AB, org no 556021-4917.

Nordea Bank AB (publ) has undertaken, in relation to certain individuals and on certain conditions, to be responsible for the potential payment liability against them in their capacity as managing directors or board member in subsidiaries to Nordea Bank AB (publ).

A limited number of employees are entitled to severance pay if they are dismissed before reaching their normal retirement age.

**Legal proceedings**

Within the framework of the normal business operations, the company faces a number of claims in civil lawsuits and disputes, most of which involve relatively limited amounts. Presently none of the current disputes is considered likely to have any significant adverse effect on the company or its financial position.

## P41

## Classification of financial instruments, cont.

## Loans designated at fair value through profit or loss

| EURm                            | 31 Dec 2011 | 31 Dec 2010 |
|---------------------------------|-------------|-------------|
| Carrying amount                 | 5,984       | 4,872       |
| Maximum exposure to credit risk | 5,984       | 4,872       |

## Financial liabilities designated at fair value through profit or loss

## Changes in fair values attributable to changes in credit risk

The funding of Markets operations are measured at fair value and classified into the category "Fair value through profit or loss". The funding of Markets is generally of such a short term nature that the effect of charges in own credit risk is not significant.

## Comparison of carrying amount and contractual amount to be paid at maturity

|                                                                       | Carrying amount | Amount to be paid at maturity |

1) Relates to those assets and liabilities held at the end of the reporting period.

**Transfers between level 1 and 2**

During the year, the parent company has transferred debt securities of EUR 671m (EUR 0m) from level 1 to level 2 and EUR 15m (EUR 33m) from level 2 to level 1 of the fair value hierarchy for financial assets and liabilities at fair value. The reason for transfers from level 1 to level 2 was that the

instruments ceased to be actively traded during the year and fair values have now been obtained using valuation techniques with observable market inputs. The reason for transfers from level 2 to level 1 was that the instruments have again been actively traded during the year and reliable quoted prices are obtained in the markets.

## P44

## Obtained collaterals which are permitted to be sold or repledged

Nordea obtains collaterals under reverse repurchase and securities borrowing agreements which, under the terms of the agreements, can be sold or repledged. The transactions are conducted under standard agreements employed by financial markets participants. Generally, the agreements require additional collateral to be provided if the value of the securities falls below a predetermined level. Under standard terms for most repurchase transactions, the recipient of collateral has an unrestricted right to sell or repledge it, subject to returning equivalent securities on settlement of the transactions. The fair value of the securities obtained as collateral under reverse repurchase and securities borrowing agreements are disclosed below.

# Auditor's report

To the annual meeting of the shareholders of Nordea Bank AB (publ)  
Corporate identity number 516406-0120

## **Report on the annual accounts and the consolidated accounts**

We have audited the annual accounts and the consolidated accounts of Nordea Bank AB (publ) for the year 2011. The annual accounts and the consolidated accounts of the company are included in the printed version of this document on pages 50–196.

### *Responsibilities of the Board of Directors and the Managing Director for the annual accounts and the consolidated accounts*

The Board of Directors and the Managing Director are responsible for the preparation and fair presentation of the annual accounts in accordance with the Annual Accounts Act of Credit Institutions and Security Companies and for the fair presentation of the consolidated accounts in accordance with the International Financial Reporting Standards, as adopted by the EU, and the Annual Accounts Act of Credit Institutions and Securities Companies, and for such internal control as the Board of Directors and the Managing Director determine is necessary to enable the preparation of annual accounts and the consolidated accounts that are free from material misstatement, whether due to fraud or error.

### *Auditor's responsibility*

Our responsibility is to express an opinion on these annual accounts and consolidated accounts based on our audit. We conducted our audit in accordance with International Standards on Auditing and generally accepted auditing standards in Sweden. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the annual accounts and the consolidated accounts are free from material misstatements. An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the annual accounts and the consolidated accounts. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the annual accounts and the consolidated accounts, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the company's preparation and fair presentation of the annual accounts and the consolidated accounts in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the Board of Directors and the Managing Director, as well as evaluating the overall presentation of the annual accounts and the consolidated accounts.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions.

### *Opinions*

In our opinion, the annual accounts have been prepared in accordance with the Annual Accounts Act of Credit Institutions and Securities Companies, and present fairly, in all material respects, the financial position of the parent company as of 31 December 2011 and of its financial performance and cash flows for the year then ended in accordance with the Annual Accounts Act of Credit Institutions and Securities Companies, the consolidated accounts have been prepared in accordance with the Annual Accounts Act of Credit Institutions and Securities Companies, and present fairly, in all material respects, the financial position of the group as of 31 December 2011 and of its financial performance and cash flows for the year then ended in accordance with the International Financial Reporting Standards, as adopted by the EU, and the Annual Accounts Act of Credit Institutions and Securities Companies. A Corporate Governance Report has been prepared. The Board of Director's report and the Corporate Governance Report are consistent with the other parts of the annual accounts and the consolidated accounts.

We therefore recommend that the annual meeting of shareholders adopt the income statement and balance sheet of the parent company and the group.

## **Report on other legal and regulatory requirements**

In addition to our audit of the annual accounts and the consolidated accounts, we have examined the proposed appropriations of the company's profit or loss and the administration of the Board of Directors and the Managing Director of Nordea Bank AB (publ) for the year 2011.

### *Responsibilities of the Board of Directors and the Managing Director*

The Board of Directors is responsible for the proposal for appropriations of the company's profit or loss, and the Board of Directors and the Managing Director are responsible for administration under the Companies Act and the Banking and Financing Business Act.

### *Auditor's responsibility*

Our responsibility is to express an opinion with reasonable assurance on the proposed appropriations of the company's profit or loss and on the administration based on our audit. We conducted the audit in accordance with generally accepted auditing standards in Sweden.

As a basis for our opinion on the Board of Directors' proposed appropriations of the company's profit or loss,

## Auditor's report cont.

we examined the Board of Directors' reasoned statement and a selection of supporting evidence in order to be able to assess whether the proposal is in accordance with the Companies Act.

As a basis for our opinion concerning discharge from liability, in addition to our audit of the annual accounts and the consolidated accounts, we examined significant decisions, actions taken and circumstances of the company in order to determine whether any member of the Board of Directors or the Managing Director is liable to the company. We also examined whether any member of the Board of Directors or the Managing Director has, in any other way, acted in contravention of the Companies Act, the

Banking and Financing Business Act, the Annual Accounts Act of Credit Institutions and Securities Companies, or the Articles of Association.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinions.

### *Opinions*

We recommend to the annual meeting of shareholders that the profit be appropriated in accordance with the proposal in the Board of Directors' report and that the members of the Board of Directors and the Managing Director be discharged from liability for the financial year.

Stockholm, 9 February 2012

## Cash flow statement *cont.*

### Comments on the cash flow statement

The cash flow statement has been prepared in accordance with IAS 7. The cash flow statement shows inflows and outflows of cash and cash equivalents during the year. Nordea Bank Finland's cash flow has been prepared in accordance with the indirect method, whereby operating profit is adjusted for effects of non-cash transactions such as depreciation and loan losses. The cash flows are classified by operating, investing and financing activities.

### Operating activities

Operating activities are the principal revenue-producing activities and cash flows are mainly derived from the operating profit for the year with adjustment for items not included in cash flow and income taxes paid. Adjustment for non-cash items includes:

| EURm                              | Group       |             | Parent company |               |
|-----------------------------------|-------------|-------------|----------------|---------------|

| <b>Total</b>                      | <b>-386</b> | <b>-967</b> | <b>-424</b>    | <b>-1,070</b> |

Changes in operating assets and liabilities consist of assets and liabilities that are part of normal business activities, such as loans, deposits and debt securities in issue. Changes in derivatives are reported net.

Cash flow from operating activities includes interest payments received and interest expenses paid with the following amounts:

| EURm                       | Group  |       | Parent company |       |
|----------------------------|--------|-------|----------------|-------|
|                            | 2011   | 2010  | 2011           | 2010  |
| Interest payments received | 2,483  | 1,828 | 2,262          | 1,607 |
| Interest expenses paid     | -1,137 | -745  | -1,134         | -743  |

### Cash and cash equivalents

The following items are included in Cash and cash equivalents assets:

| EURm                                            | Group         |               | Parent company |               |
|-------------------------------------------------|---------------|---------------|----------------|---------------|
|                                                 | 31 Dec 2011   | 31 Dec 2010   | 31 Dec 2011    | 31 Dec 2010   |
| Cash and balances with central banks            | 286           | 7,485         | 286            | 7,485         |
| Loans to credit institutions, payable on demand | 17,695        | 7,462         | 17,680         | 7,447         |
|                                                 | <b>17,981</b> | <b>14,947</b> | <b>17,966</b>  | <b>14,932</b> |

Cash comprises legal tender and bank notes in foreign currencies. Balances with central banks consist of deposits in accounts with central banks and postal giro systems under government authority, where the following conditions are fulfilled;

- the central bank or the postal giro system is domiciled in the country where the institution is established
- the balance on the account is readily available any time.

Loans to credit institutions, payable on demand include liquid assets not represented by bonds or other interest-bearing securities.

### 1. Basis for presentation

NBF's financial statements are prepared in accordance with International Financial Reporting Standards (IFRS) and interpretations of such standards by the International Financial Reporting Interpretations Committee (IFRIC), as endorsed by the EU Commission. In addition, certain complementary rules in the Finnish Accounting Act, the Finnish Credit Institutions Act, the Financial Supervision Authority's Regulations and Guidelines and the Decision of the Ministry of Finance on the financial statements and consolidated statements of credit institutions have also been applied.

The disclosures, required in the standards and legislation above, have been included in the notes, the Risk, Liquidity and Capital management section or in other parts of the "Financial statements".

On 29 February 2012 the Board of Directors approved the financial statements, subject to final approval of the Annual General Meeting on 7 March 2012.

### 2. Changed accounting policies and presentation

The accounting policies, basis for calculations and presentation are, in all material aspects, unchanged in comparison with the 2010 Annual Report, except for the recognition of repurchase and reverse repurchase agreements. These changes are further described below. Below follows also a section covering other changes in IFRSs implemented in 2011, which have not had any significant impact on Nordea.

#### Recognition of repurchase agreements and reverse repurchase agreements

Repurchase agreements and reverse repurchase agreements have previously been recognised on the balance sheet on trade date, but are as from 2011 recognised on settlement date. This has not had any impact on the income statement. The comparative figures have not been restated as the impact is insignificant. The impact on the balance sheet as per 31 December 2011 and the impact, that has not been restated for, as per 31 December 2010 are disclosed in the below table.

#### Group

### Changes in IFRSs implemented 2011

The IASB has amended IAS 24 “Related Party Disclosures” (Relationships with the state), IAS 32 “Financial Instruments: Presentation” (Rights issues) and IFRIC 14 “IAS 19 - The Limit on a Defined Benefit Asset, Minimum Funding Requirements and their Interaction” as well as published “Improvements to IFRSs 2010” and IFRIC 19 “Extinguishing Financial Liabilities with Equity Instruments”. These amended and published standards and improvements are effective for Nordea as from 1 January 2011, but have not had any significant impact on 2011. The amendment of IAS 32 may affect possible future rights issues involving different currencies, whilst the amendments to IAS 24 and IFRIC 14 as well as the published “Improvements to IFRSs 2010” and IFRIC 19 are not expected to have a significant impact on subsequent periods.

### 3. Changes in IFRS not yet effective for Nordea

#### *IFRS 9 “Financial instruments” (Phase 1)*

In 2009 IASB published a new standard on financial instruments. The standard is the first step in the replacement of IAS 39 “Financial instruments: Recognition and Measurement” and this first phase covers the classification and measurement of financial assets and liabilities. The effective date for Nordea is as from 1 January 2015, but earlier application is permitted. The EU commission has not endorsed this standard for implementation in 2011.

The tentative assessment is that there will be an impact on the financial statements as the new standard will decrease the number of measurements categories and therefore have an impact on the presentation and disclosures covering financial instruments. The new standard is, on the other hand, not expected to have a significant impact on Nordea’s income statement and balance sheet as the mixed measurement model will be maintained. No significant reclassifications between fair value and amortised cost or impact on the capital adequacy are expected, but this is naturally dependent

on the financial instruments in Nordea’s balance sheet at transition.

Nordea has, due to the fact that the standard is not yet endorsed by the EU commission, not finalised the investigation of the impact on the financial statements in the period of initial application or in subsequent periods.

*IFRS 10 “Consolidated Financial Statements”, IFRS 11 “Joint Arrangements”, IFRS 12 “Disclosures of Interests in Other entities”, IAS 27 “Separate Financial Statements” and IAS 28 “Investments in Associates and Joint Ventures”*

IASB has published three new standards relating to consolidation, IFRS 10, IFRS 11 and IFRS 12, as well as amended IAS 27 and IAS 28. The effective date for these standards and amendments for Nordea is as from 1 January 2013, but earlier application is permitted. The EU commission has not endorsed these standards and amendments for implementation in 2011.

The tentative assessment is that the new standards and amendments are not expected to have any significant impact on Nordea’s income statement. The main potential impact is that the new definition of control can potentially lead to consolidation of funds, for instance mutual funds. A potential consolidation of mutual funds would increase assets and liabilities in the balance sheet, and reduce equity to the extent the consolidated fund holds shares in Nordea (Treasury shares). The new standards furthermore include more extensive disclosure requirements which will have an impact on Nordea’s disclosures covering consolidated and unconsolidated entities. It is not expected that the new standards and amendments will have a significant impact on the capital adequacy.

Nordea has, due to the fact that the standards and amendments are not yet endorsed by the EU commission, not finalised the investigation of the impact on the financial statements in the period of initial application or in subsequent periods.

### *IFRS 13 "Fair Value Measurement"*

IASB has published IFRS 13. The effective date for Nordea is as from 1 January 2013, but earlier application is permitted. The EU commission has not endorsed this standard for implementation in 2011.

The tentative assessment is that the new standard will not have a significant impact on Nordea's financial statements nor on its capital adequacy.

Nordea has, due to the fact that the standard is not yet endorsed by the EU commission, not finalised the investigation of the impact on the financial statements in the period of initial application or in subsequent periods.

### *IAS 19 "Employee Benefits"*

IASB has amended IAS 19. The effective date for Nordea is as from 1 January 2013, but earlier application is permitted. The EU commission has not endorsed this amendment for implementation in 2011.

The tentative assessment is that the amended standard will have an impact on the financial statements in the period of initial application, as well as in subsequent periods. This is mainly related to defined benefit plans. The amended IAS 19 states that actuarial gains/losses shall be recognised immediately in equity through other comprehensive income, which will lead to higher volatility in equity compared to the current corridor approach.

The amended IAS 19 furthermore states that the expected return on plan assets shall be recognised using the same interest rate as the discount rate used when measuring the pension obligation. This will lead to higher pension expenses in the income statement as Nordea currently expects a higher return than the discount rate. Any difference between the actual return and the expected return will be a part of the actuarial gains/losses recognised immediately in equity through other comprehensive income.

The unrecognised actuarial losses as per 31 December 2011 amounted in NBF to EUR 25m. If Nordea has unrecognised actuarial losses at transition there will be a negative impact on equity. See note 34 "Retirement benefit obligations" for more information.

As the amended IAS 19 has an impact on equity it is expected that there will be an impact also on the capital adequacy.

### *Other forthcoming changes in IFRSs*

IAS 1 "Presentation of Financial Statements" has been amended. The amended standard changes the presentation of other comprehensive income. The effective date for Nordea is as from 1 January 2013, but earlier application is permitted. The EU commission has not endorsed this standard for implementation in 2011.

IFRS 7 "Financial instruments: Disclosures" has been amended and will lead to additional disclosures around transferred assets. The effective date for Nordea is as from 1 January 2012, but earlier application is permitted. The EU commission has endorsed this standard for implementation in 2011.

IAS 32 "Financial Instruments: Presentation" has been amended. The change relates to offsetting of financial assets and financial liabilities. The amendment is not intended to change the criteria for offsetting, but to give additional guidance on how to apply the existing criteria. IFRS 7 "Financial instruments: Disclosures" has furthermore been amended and will lead to additional disclosures around offsetting of financial assets and financial liabilities. The effective date for Nordea is as from 1 January 2014 for amendments to IAS 32 and from 1 January 2013 for amendments to IFRS 7, but earlier application is permitted. The EU commission has not endorsed these amendments for implementation in 2011.

The IASB has furthermore amended IFRS 1 "First-time Adoption of International Financial Reporting Standards" (Hyperinflation/Fixed dates) and IAS 12 "Income taxes" (Recovery of underlying asset) and published IFRIC 20 "Stripping costs". The effective date for Nordea is as from 1 January 2012, but earlier application is permitted. The EU commission has not endorsed the amended standards and published interpretation for implementation in 2011.

The abovementioned amended standards and interpretation not yet adopted, within the section "Other forthcoming changes in IFRSs", are not, in the period of initial application or in subsequent periods, expected to have any significant impact on the financial statements, apart from on disclosures, nor on the capital adequacy.

#### 4. Critical judgements and key sources of estimation uncertainty

The preparation of financial statements in accordance with generally accepted accounting principles requires, in some cases, the use of estimates and assumptions by management. The estimates are based on past experience and assumptions that management believes are fair and reasonable. These estimates and the judgement behind them affect the reported amounts of assets, liabilities and off-balance sheet items, as well as income and expenses in the financial statements presented. Actual outcome can later, to some extent, differ from the estimates and the assumptions made.

Certain accounting policies are considered to be particularly important to the financial position of Nordea, since they require management to make difficult, complex or subjective judgements and estimates, the majority of which relate to matters that are inherently uncertain. These critical judgements and estimates are in particular associated with:

- the fair value measurement of certain financial instruments
- the impairment testing of:
  - goodwill and
  - loans to the public/credit institutions
- the actuarial calculations of pension liabilities and plan assets related to employees
- the valuation of deferred tax assets
- the valuation of investment properties
- claims in civil lawsuits.

##### **Fair value measurement of certain financial instruments**

Critical judgement is exercised when determining fair value of OTC derivatives and other financial instruments that lack quoted prices or recently observed market prices in the following areas:

- The choice of valuation techniques
- The determination of when quoted prices fail to represent fair value (including the judgement of whether markets are active)
- The construction of fair value adjustments in order to incorporate relevant risk factors such as credit risk, model risk and liquidity risk
- The judgement of which market parameters that are observable.

In all of these instances, decisions are based upon professional judgement in accordance with Nordea's accounting and valuation policies. In order to ensure proper governance, Nordea has a Group Valuation Committee that on an ongoing basis reviews critical judgements that are deemed to have a significant impact on fair value measurements.

See also the separate section 10 "Determination of fair value of financial instruments" and Note 42 "Assets and liabilities at fair value".

##### **Impairment testing**

###### *Goodwill*

Goodwill is tested for impairment annually, or more frequently if events or changes in circumstances indicate that it might be impaired. This consists of an analysis to assess whether the carrying amount of goodwill is fully recoverable. The determination of the recoverable amount involves establishing the value in use, measured as the present value of the cash flows expected from the cash-generating unit, to which the goodwill has been allocated.

The forecasts of future cash flows are based on Nordea's best estimates of future revenues and expenses for the cash-generating units to which goodwill has been allocated. A number of assumptions and estimates have significant impact on these calculations and include parameters like macroeconomic assumptions, market growth, business volumes, margins and cost effectiveness. Changes to any of these parameters, following changes in market conditions, competition, strategy or other, affects the forecasted cash flows. Under current market conditions such changes are not expected to lead to any significant impairment charges of goodwill, but may do so in subsequent periods.

See also the separate section 15 "Intangible assets" and Note 22 "Intangible assets".

###### *Loans to the public/credit institutions*

When testing individual loans for impairment, the most critical judgement, containing the highest uncertainty, relates to the estimation of the most probable future cash flows generated from the customer.

When testing a group of loans collectively for impairment, the key aspect is to identify the events and/or the observable data that indicate that losses have been incurred in the group of loans. Assessing the net present value of the cash flows generated by the customers in the group contains a high degree of uncertainty when using historical data and the acquired experience when adjusting the assumptions based on historical data to reflect the current situation.

See also the separate section 13 "Loans to the public/credit institutions" and Note 14 "Loans and impairment".

#### **Actuarial calculations of pension liabilities and plan assets related to employees**

The Projected Benefit pension Obligation (PBO) for major pension plans is calculated by external actuaries using demographic assumptions based on the current population. As a basis for these calculations a number of actuarial and financial parameters are used. The most important financial parameter is the discount rate. Other parameters like assumptions about salary increases and inflation are based on the expected long-term development of these parameters. The fixing of these parameters at year-end is disclosed in Note 34 "Retirement benefit obligations".

The major part of the assets covering the pension liabilities is invested in liquid assets and valued at quoted prices at year-end. The expected return on plan assets is fixed taking into account the asset composition and based on long-term expectations on the return on the different asset classes. The expected return is also disclosed in Note 34 "Retirement benefit obligations".

See also the separate section 19 "Employee benefits" and Note 34 "Retirement benefit obligations".

#### **Valuation of deferred tax assets**

The valuation of deferred tax assets is influenced by management's assessment of Nordea's future profitability. This assessment is updated and reviewed at each balance sheet date, and is, if necessary, revised to reflect the current situation.

See also the separate section 18 "Taxes" and Note 12 "Taxes".

#### **Valuation of investment properties**

Investment properties are measured at fair value as described in section 17 "Investment property". As there normally are no active markets for investment properties, the fair values are estimated based on discounted cash flow models. These models are based on assumptions on future rents, vacancy levels, operating and maintenance costs, yield requirements and interest rates.

See also the separate section 17 "Investment property" and Note 25 "Investment property".

#### **Claims in civil lawsuits**

Within the framework of the normal business operations, Nordea faces a number of claims in civil lawsuits and disputes, most of which involve relatively limited amounts. Presently none of these disputes are considered likely to have any significant adverse effect on Nordea or its financial position. See also Note 33 "Provisions" and Note 38 "Contingent liabilities".

## **5. Principles of consolidation**

#### **Consolidated entities**

The consolidated financial statements include the accounts of the parent company Nordea Bank Finland Plc, and those entities that the parent company controls. Control is generally achieved when the parent company owns, directly or indirectly through group undertakings, more than 50 per cent of the voting rights or otherwise has the power to govern the financial and operating policies of the entity.

All Group undertakings are consolidated using the purchase method. Under the purchase method, the acquisition is regarded as a transaction whereby the parent company indirectly acquires the subsidiary's assets and assumes its liabilities and contingent liabilities. The Group's acquisition cost is established in a purchase price allocation analysis. In such analysis, the cost of the business combination is the aggregate of the fair values, at the date of exchange, of assets given, liabilities incurred or assumed and equity instruments issued by the acquirer, in exchange for the identifiable net assets acquired. Costs directly attributable to the business combination are expensed. When the cost of the business combination exceeds the net fair value of the identifiable assets, liabilities and contingent liabilities, the excess is reported as goodwill. If the difference is negative, such difference is recognised immediately in the income statement.

Intra-group transactions and balances between the consolidated group undertakings are eliminated.

The Group undertakings are included in the consolidated accounts as from the date on which control is transferred to NBF and are no longer consolidated as from the date on which control ceases.

Equity and net income attributable to non-controlling interests are separately disclosed in the balance sheet, income statement and statement of comprehensive income.

In the consolidation process the reporting from the subsidiaries is adjusted to ensure consistency with the IFRS principles applied by Nordea.

#### *Investments in associated undertakings*

The equity method of accounting is used for associated undertakings where the share of voting rights is between 20 and 50 per cent and/or where NBF has significant influence. Investments within Nordea's investment activities, which are classified as a venture capital organisation within Nordea, are measured at fair value in accordance with the rules set out in IAS 28 and IAS 39. Further information on the equity method is disclosed in section 6 "Recognition of operating income and impairment".

Profits from companies accounted for under the equity method are reported post-taxes in the income statement. Consequently, the tax expense related to these profits is not included in the income tax expense for Nordea.

Internal transactions, in the income statement, between Nordea and its associated companies are not eliminated. Nordea does not have any transactions including sales of assets with associated companies.

#### *Special Purpose Entities (SPE)*

In accordance with IFRS Nordea does not consolidate SPEs' assets and liabilities beyond its control. In order to determine whether Nordea controls a SPE or not, Nordea has to make judgements about risks and rewards and assess the ability to make operational decisions for the SPE in question.

When assessing whether NBF shall consolidate a SPE, a range of factors are evaluated. These factors include whether the activities of the SPE are being in substance conducted on NBF's behalf or if NBF has in substance the decision making powers, the rights to obtain the majority of the benefits or the majority of the residual- or ownership risks. NBF consolidates all SPEs, where NBF has retained the majority of the risks and rewards. For the SPEs that are not consolidated the rationale is that NBF does not have any significant risks or rewards on these assets and liabilities.

Nordea has created a number of SPEs to allow clients to invest in assets invested in by the SPEs. Some SPEs invest in tradable financial instruments, such as shares and bonds (mutual funds). Other SPEs invest in structured credit products or acquire assets from customers of Nordea. Nordea is generally the investment manager and has sole discretion about investments and other administrative decisions. Typically, Nordea will receive service and commission fees in connection to the creation of the SPEs, or because it acts as investment manager, custodian or in some other function. This in itself does not constitute a beneficial interest triggering consolidation. In some SPEs Nordea has also supplied substantial parts of the funding in the form of fund units, loans or credit commitments. In these SPEs Nordea has a beneficial interest and retains the majority of the risks and rewards, which is why these SPEs are consolidated. Note 20 "Investments in group undertakings" lists the major subsidiaries in the NBF Group, including consolidated SPEs.

#### **Currency translation of foreign entities**

The consolidated financial statements are prepared in euro (EUR), the presentation currency of the parent company Nordea Bank Finland Plc. The current method is used when translating the financial statements of foreign entities into EUR from their functional currency. The assets and liabilities of

foreign entities have been translated at the closing rates, while items in the income statements and statements of comprehensive income are translated at the average exchange rate for the year. Translation differences are accounted for in other comprehensive income and are accumulated in the translation reserve in equity.

Goodwill and fair value adjustments arising from the acquisition of group undertakings are treated as items in the same functional currency as the cash generating unit to which they belong and are also translated at the closing rate.

## **6. Recognition of operating income and impairment**

### **Net interest income**

Interest income and expense are calculated and recognised based on the effective interest rate method or, if considered appropriate, based on a method that results in an interest income or interest expense that is a reasonable approximation of using the effective interest rate method as basis for the calculation.

Interest income and interest expense related to all balance sheet items in Markets are recognised in the income statement on the line "Net result from items at fair value". Interest income and expense connected to internal placements by and internal funding of Markets are replaced with the related Group external interest income and interest expense and recognised on the line "Net result from items at fair value".

Interest on derivatives used for hedging is also recognised in "Net interest income", as well as fees that are considered to be an integral part of the effective interest rate of a financial instrument.

### **Net fee and commission income**

Nordea earns commission income from different services provided to its customers. The recognition of commission income depends on the purpose for which the fees are received. Fees are either recognised as revenue when services are provided or in connection to the execution of a significant act. Fees received in connection to performed services are recognised as income in the period these services are provided. A loan syndication fee received as payment for arranging a loan, as well as other fees received as payments for certain acts, are recognised as revenue when the act has been completed, i.e. when the syndication has been finalised.

Commission expenses are transaction based and recognised in the period when the services are received.

Income from issued financial guarantees and expenses from bought financial guarantees, including fees paid to state guarantees, are amortised over the duration of

the instruments and classified as “Fee and commission income” and “Fee and commission expense” respectively.

#### **Net result from items at fair value**

Realised and unrealised gains and losses on financial instruments measured at fair value through profit or loss are recognised in the item “Net result from items at fair value”.

Realised and unrealised gains and losses derive from:

- Shares/participations and other share-related instruments
- Interest-bearing securities and other interest-related instruments
- Other financial instruments, which contain credit derivatives as well as commodity instruments/derivatives
- Foreign exchange gains/losses
- Investment properties, which include realised and unrealised income, for instance revaluation gains and losses. This line also includes realised results from disposals as well as the running property yield stemming from the holding of investment properties.

Interest income and interest expense related to all balance sheet items in Markets including the funding of these operations, are recognised in “Net result from items at fair value”.

“Net result from items at fair value” includes also losses from counterparty risk on instruments classified into the category Financial assets at fair value through profit or loss as well as impairment on instruments classified into the category Available for sale. Impairment losses from instruments within other categories are recognised in the items “Net loan losses” or “Impairment of securities held as financial non-current assets” (see also the sub-sections “Net loan losses” and “Impairment of securities held as financial non-current assets” below).

Dividends received are recognised in the income statement as “Net result from items at fair value” and classified as “Shares/participations and other share-related instruments” in the note. Income is recognised in the period in which the right to receive payment is established.

#### **Profit from companies accounted for under the equity method**

The profit from companies accounted for under the equity method is defined as the post-acquisition change in NBF’s share of net assets in the associated companies. NBF’s share of items accounted for in other comprehensive income in the associated companies is accounted for in other comprehensive income in NBF. Profits from companies accounted for under the equity method are, as stated in section 5

“Principles of consolidation”, reported in the income statement post-taxes. Consequently the tax expense related to these profits is excluded from the income tax expense for NBF.

Fair values are, at acquisition, allocated to the associated company’s identifiable assets, liabilities and contingent liabilities. Any difference between NBF’s share of the fair values of the acquired identifiable net assets and the purchase price is goodwill or negative goodwill. Goodwill is included in the carrying amount of the associated company. Subsequently the investment in the associated company increases/decreases with NBF’s share of the post-acquisition change in net assets in the associated company and decreases through received dividends and impairment. An impairment charge can be reversed in a subsequent period.

The change in Nordea’s share of the net assets is generally based on monthly reporting from the associated companies. For some associated companies not individually significant the change in Nordea’s share of the net assets is based on the external reporting of the associated companies and affects the financial statements of Nordea in the period in which the information is available. The reporting from the associated companies is, if applicable, adjusted to comply with Nordea’s accounting policies.

#### **Other operating income**

Net gains from divestments of shares in subsidiaries and associated companies and net gains on sale of tangible assets as well as other operating income, not related to any other income line, are generally recognised when it is probable that the benefits associated with the transaction will flow to Nordea and if the significant risks and rewards have been transferred to the buyer (generally when the transactions are finalised).

#### **Net loan losses**

Impairment losses from financial assets classified into the category Loans and receivables (see section 12 “Financial instruments”), in the items “Loans to credit institutions” and “Loans to the public” in the balance sheet, are reported as “Net loan losses” together with losses from financial guarantees. Losses are reported net of any collateral and other credit enhancements. Nordea’s accounting policies for the calculation of impairment losses on loans can be found in section 13 “Loans to the public/credit institutions”.

Counterparty losses on instruments classified into the category Financial assets at fair value through profit or loss, including credit derivatives, as well as impairment on financial assets classified into the category Available for sale are reported under “Net result from items at fair value”.

#### **Impairment of securities held as financial non-current assets**

Impairment on investments in interest-bearing securities, classified into the categories Loans and receivables or Held to maturity, and on investments in associated companies are classified as “Impairment of securities held as financial non-current assets” in the income statement. The policies covering impairment of financial assets classified into the categories Loans and receivables and Held to maturity are disclosed in section 12 “Financial instruments” and section 13 “Loans to the public/credit institutions”.

Investments in associated companies are assessed for impairment annually. If observable indicators (loss events) indicate that an associated company is impaired, an impairment test is performed to assess whether there is objective evidence of impairment. The carrying amount of the investment in the associate is compared with the recoverable amount (higher of value in use and fair value less cost to sell) and the carrying amount is written down to the recoverable amount if required. No such impairment has been incurred during 2011.

Impairment losses are reversed if the recoverable amount increases. The carrying amount is then increased to the recoverable amount, but cannot exceed the carrying amount that would have been determined had no impairment loss been recognised.

#### **7. Recognition and derecognition of financial instruments in the balance sheet**

Derivative instruments, quoted securities and foreign exchange spot transactions are recognised on and derecognised (reclassified to the items “Other assets” or “Other liabilities” in the balance sheet between trade date and settlement date) from the balance sheet on the trade date. Other financial instruments are recognised on the balance sheet on settlement date.

Financial assets, other than those for which trade date accounting is applied, are derecognised from the balance sheet when the contractual rights to the cash flows from the financial asset expire or are transferred to another party. The rights to the cash flows normally expire or are transferred when the counterpart has performed by e.g. repaying a loan to Nordea, i.e. on settlement date.

In some cases, Nordea enters into transactions where it transfers assets that are recognised on the balance sheet, but retains either all or a portion of risks and rewards from the transferred assets. If all or substantially all risks and rewards are retained, the transferred assets are not derecognised from the balance sheet. If Nordea’s counterpart can sell or repledge the transferred assets, the assets are reclassified to the item “Financial instruments pledged

as collateral” in the balance sheet. Transfers of assets with retention of all or substantially all risks and rewards include e.g. security lending agreements and repurchase agreements.

Financial liabilities are derecognised from the balance sheet when the liability is extinguished. Normally this occurs when Nordea performs, for example when Nordea repays a deposit to the counterpart, i.e. on settlement date. Financial liabilities under trade date accounting are generally reclassified to “Other liabilities” in the balance sheet on trade date.

For further information, see sections “Securities borrowing and lending agreements” and “Repurchase and reverse repurchase agreements” within 12 “Financial instruments”, as well as Note 43 “Obtained collaterals which are permitted to be sold or repledged”.

#### **8. Translation of assets and liabilities denominated in foreign currencies**

The functional currency of each entity is decided based upon the primary economic environment in which the entity operates. Foreign currency is defined as any currency other than the functional currency of the entity. Foreign currency transactions are recorded at the exchange rate on the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated at the exchange rate on the balance sheet date.

Exchange differences arising on the settlement of transactions at rates different from those at the date of the transaction, and unrealised translation differences on unsettled foreign currency monetary assets and liabilities, are recognised in the income statement in the item “Net result from items at fair value”.

#### **9. Hedge accounting**

IAS 39 includes principles and rules concerning accounting for hedging instruments and the underlying hedged item, so-called hedge accounting. Nordea applies the EU carve out version of IAS 39 for portfolio hedges of both assets and liabilities. The EU carve out macro hedging enables a group of derivatives (or proportions thereof) to be viewed in combination and designated as the hedging instrument and removes some of the limitations in fair value hedge accounting relating to hedging core deposits and under-hedging strategies.

The hedge accounting policy within Nordea has been developed to fulfil the requirements set out in IAS 39. Nordea uses hedge accounting in order to have a symmetrical accounting treatment of the changes in fair value of the hedged item and changes in fair value of the hedging instruments as well as to hedge the exposure to variability in future cash flows and the

exposure to net investments in foreign operations. The overall purpose is to have a true and fair presentation of Nordea's economical hedges in the financial statements. The overall operational responsibility to hedge positions and for hedge accounting lies within Group Treasury.

There are three forms of hedge accounting:

- Fair value hedge accounting
- Cash flow hedge accounting
- Hedges of net investments

NBF currently applies only fair value hedge accounting.

#### **Fair value hedge accounting**

Fair value hedge accounting is used when derivatives are hedging changes in fair value of a recognised asset or liability attributable to a specific risk. The risk of changes in fair value of assets and liabilities in Nordea's financial statements originates mainly from loans, securities and deposits with a fixed interest rate, causing interest rate risk. Changes in fair value from derivatives as well as changes in fair value of the hedged item attributable to the risks being hedged will be recognised separately in the income statement in the item "Net result from items at fair value". Given an effective hedge, the two changes in fair value will more or less balance, meaning the net result will be close to zero. The changes in fair value of the hedged item attributable to the risks hedged with the derivative instrument are reflected in an adjustment to the carrying amount of the hedged item, which is also recognised in the income statement. The fair value change of the hedged item in a portfolio hedge of interest rate risks is reported separately from the portfolio in the item "Fair value changes of the hedged items in portfolio hedge of interest rate risk" in the balance sheet.

Fair value hedge accounting in Nordea is performed mainly on a portfolio basis. Any ineffectiveness is recognised in the income statement under the item "Net result from items at fair value".

#### *Hedged items*

A hedged item in a fair value hedge can be a recognised single asset or liability, an unrecognised firm commitment, or a portion thereof. The hedged item can also be a group of assets, liabilities or firm commitments with similar risk characteristics. Hedged items in Nordea consist of both individual assets or liabilities and portfolios of assets and/or liabilities.

#### *Hedging instruments*

The hedging instruments used in Nordea are predominantly interest rate swaps and cross currency interest rate swaps, which are always held at fair value.

Cash instruments are only used in a few transactions as hedging instruments when hedging currency risk.

#### *Hedge effectiveness*

The application of hedge accounting requires the hedge to be highly effective. A hedge is regarded as highly effective if at inception and throughout its life it can be expected that changes in fair value of the hedged item as regards the hedged risk can be essentially offset by changes in fair value of the hedging instrument. The result should be within a range of 80–125 per cent. When assessing hedge effectiveness retrospectively Nordea measures the fair value of the hedging instruments and compares the change in fair value of the hedging instrument to the change in fair value of the hedged item. The effectiveness measurement is made on a cumulative basis.

If the hedge relationship does not fulfil the requirements, hedge accounting will be terminated. The change in the unrealised value of the derivatives will, prospectively from the last time it was last proven effective, be accounted for in the income statement. For fair value hedges, the change in the fair value on the hedged item, up to the point when the hedge relationship is terminated, is amortised to the income statement on a straight-line basis over the remaining maturity of the hedged item.

#### **10. Determination of fair value of financial instruments**

Financial assets and liabilities classified into the categories Financial assets/liabilities at fair value through profit or loss (including derivative instruments) are recorded at fair value on the balance sheet with changes in fair value recognised in the income statement in the item "Net result from items at fair value".

Fair value is defined as the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction.

The existence of published price quotations in an active market is the best evidence of fair value and when they exist they are used to measure financial assets and financial liabilities. Nordea is predominantly using published price quotations to establish fair value for items disclosed under the following balance sheet items

- Treasury bills
- Interest-bearing securities
- Shares
- Derivatives (listed derivatives)

If quoted prices for a financial instrument fail to represent actual and regularly occurring market transactions or if quoted prices are not available, fair

value is established by using an appropriate valuation technique. Valuation techniques can range from simple discounted cash flow analysis to complex option pricing models. Valuation models are designed to apply observable market prices and rates as input whenever possible, but can also make use of unobservable model parameters. Nordea is predominantly using valuation techniques to establish fair value for items disclosed under the following balance sheet items:

- Treasury bills (when quoted prices in an active market are not available)
- Interest-bearing securities (when quoted prices in an active market are not available)
- Shares (when quoted prices in an active market are not available)
- Derivatives (OTC derivatives)

Fair value is calculated as the theoretical net present value of the individual contracts, based on independently sourced market parameters and assuming no risks and uncertainties. This calculation is supplemented by a portfolio adjustment. The portfolio adjustment covers uncertainties associated with the valuation techniques, model assumptions and unobservable parameters as well as the portfolio's counterparty credit risk and liquidity risk. An important part of the portfolio adjustment serves to adjust the net open market risk exposures from mid-prices to ask or bid prices (depending on the net position). For different risk categories, exposures are aggregated and netted according to internal guidelines and aggregated market price information on bid-ask spreads are applied in the calculation. Spreads are updated on a regular basis.

The portfolio adjustment for uncertainties associated with model assumptions comprises two components (The calculation principles are defined as part of the internal approval process for valuation models):

- Benchmarking of the model output (market values) against market information or against results from alternative models, where available
- Sensitivity calculations where unobservable parameters are varied to take other reasonable values

The portfolio adjustment for counterparty risk in OTC-derivatives is based on the current exposure towards each counterpart, the estimated potential future exposure as well as an estimate of the cost of hedging the counterparty risk. This cost of hedging is either based directly on market prices (where available) or on a theoretical calculation based on the internal credit rating of the counterpart.

For financial instruments, where fair value is estimated by a valuation technique, it is investigated whether the variables used in the valuation model are predominantly based on data from observable markets. By data from observable markets, Nordea considers data that can be collected from generally available external sources and where this data is judged to represent realistic market prices. If non-observable data has a significant impact on the valuation, the instrument cannot be recognised initially at the fair value estimated by the valuation technique and any upfront gains are thereby deferred and amortised through the income statement over the contractual life of the instrument. The deferred upfront gains are subsequently released to income if the non-observable data becomes observable.

Note 42 "Assets and liabilities at fair value" provides a breakdown of fair values of financial instruments measured on the basis of:

- quoted prices in active markets for the same instrument (level 1),
- valuation techniques using observable data (level 2), and
- valuation techniques using non-observable data (level 3).

The valuation models applied by Nordea are consistent with accepted economic methodologies for pricing financial instruments and incorporate the factors that market participants consider when setting a price.

New valuation models are subject to approval by Group Risk Management and all models are reviewed on a regular basis.

For further information, see Note 42 "Assets and liabilities at fair value".

## 11. Cash and cash equivalents

Cash and cash equivalents consist of cash and balances with central banks where the following conditions are fulfilled:

- The central bank is domiciled in a country where Nordea is operating under a banking licence.
- The balance is readily available at any time.

Cash and cash equivalents are financial instruments classified into the category "Loans and receivables", see section 12 "Financial instruments".

Loans to credit institutions payable on demand are also recognised as "Cash and cash equivalents" in the cash flow statement.

## 12. Financial instruments

### Classification of financial instruments

Each financial instrument has been classified into one of the following categories:

Financial assets:

- Financial assets at fair value through profit or loss:
  - Held for trading
  - Designated at fair value through profit or loss (Fair Value Option)
- Loans and receivables
- Held to maturity
- Available for sale

Financial liabilities:

- Financial liabilities at fair value through profit or loss:
  - Held for trading
  - Designated at fair value through profit or loss (Fair Value Option)
- Other financial liabilities.

All financial assets and liabilities are initially measured at fair value. The classification of financial instruments into different categories forms the basis for how each instrument is subsequently measured in the balance sheet and how changes in its value are recognised. In Note 41 “Classification of financial instruments” the classification of the financial instruments in Nordea’s balance sheet into different categories is presented.

#### *Financial assets and financial liabilities at fair value through profit or loss*

Financial assets and financial liabilities at fair value through profit or loss are measured at fair value, excluding transaction costs. All changes in fair values are recognised directly in the income statement in the item “Net result from items at fair value”.

The category consists of two sub-categories: Held for trading and Designated at fair value through profit or loss (Fair value option).

The sub-category Held for trading mainly contains derivative instruments that are held for trading purposes, interest-bearing securities and shares within Markets and Treasury. It also contains trading liabilities such as short-selling positions.

The major parts of the financial assets/liabilities classified into the category Designated at fair value through profit or loss are certain other assets/liabilities, interest bearing securities and shares.

Nordea also applies the Fair value option on certain financial assets and financial liabilities related to Markets. The classification stems from that Markets is

managing and measuring all its financial assets and liabilities to fair value. Consequently, all financial assets and financial liabilities in Markets are classified into the categories Financial assets/Financial liabilities at fair value through profit or loss.

#### *Loans and receivables*

Loans and receivables are non-derivative financial assets, with fixed or determinable payments, that are not quoted in an active market. These assets and their impairment are further described in the separate section 13 “Loans to the public/credit institutions”.

#### *Held to maturity*

Financial assets that Nordea has chosen to classify into the category Held-to-maturity are non-derivative financial assets with fixed or determinable payments and fixed maturity that Nordea has the positive intent and ability to hold to maturity. Financial assets classified into the category Held-to-maturity are initially recognised in the balance sheet at the acquisition price, including transaction costs. Subsequent to initial recognition, the instruments within this category are measured at amortised cost. In an amortised cost measurement, the difference between acquisition cost and redemption value is amortised in the income statement over the remaining term using the effective interest rate method.

If more than an insignificant amount of the Held to maturity portfolio is sold or transferred the Held to maturity category is tainted, except for if the sale or transfer either occur close to maturity, after substantially all of the original principal is already collected, or due to an isolated non-recurring event beyond the control of Nordea.

Nordea assesses at each reporting date whether there is any objective evidence that the asset is impaired. If there is such evidence, an impairment loss is recorded. The loss is calculated as the difference between the carrying amount and the present value of estimated future cash flows and is recognised as “Impairment of securities held as financial non-current assets” in the income statement. See section 13 “Loans to the public/credit institutions” for more information on the identification and measurement of objective evidence of impairment, which is applicable also for interest-bearing securities classified into the category Held to maturity.

#### *Available for sale*

Financial instruments classified into the category Available for sale are measured at fair value. Changes in fair values, except for interest, foreign exchange effects and impairment losses, are recognised in the fair value reserve in equity through other comprehensive income. Interest is recognised in the item “Interest income” and foreign exchange effects and impairment

losses in the item "Net result from items at fair value" in the income statement.

When an instrument classified into the category Available for sale is disposed of, the fair value changes that previously have been accumulated in the fair value reserve (related to Available for sale investments) in other comprehensive income are removed from equity and recognised in the income statement in the item "Net result from items at fair value".

Financial assets classified into the category Available for sale are assessed at least annually in order to determine any need for impairment losses. If there is objective evidence of impairment, the accumulated loss that has been recognised in other comprehensive income is removed from equity and recognised as "Net result from items at fair value" in the income statement. The amount of the accumulated loss that is recycled from equity is the difference between the asset's acquisition cost and current fair value. For equity investments a prolonged and significant decline in the fair value, compared to the acquisition cost, is considered to be objective evidence of impairment. Objective evidence of impairment for a debt instrument is rather connected to a loss event, such as an issuer's financial difficulty.

#### *Other financial liabilities*

Financial liabilities, other than those classified into the category Financial liabilities at fair value through profit or loss, are measured at amortised cost. Interest from Other financial liabilities is recognised in the item "Interest expense" in the income statement.

#### **Hybrid (combined) financial instruments**

Hybrid (combined) financial instruments are contracts containing a host contract and an embedded derivative instrument. Such combinations arise predominantly from the issuance of structured debt instruments, such as issued index-linked bonds.

Index-linked bonds issued by Markets as part of the trading portfolio are classified into the category Held for trading, and the entire combined instrument, host contract together with the embedded derivative, is measured at fair value through profit or loss. Changes in fair values are recognised in the income statement in the item "Net result from items at fair value".

#### **Securities borrowing and lending agreements**

Generally, securities borrowing and securities lending transactions are entered into on a collateralised basis. Unless the risks and rewards of ownership are transferred, the securities are not recognised on or derecognised from the balance sheet. In the cases where the counterpart is entitled to resell or repledge the securities, the securities are reclassified to the balance sheet item "Financial instruments pledged as collateral".

Securities in securities lending transactions are also disclosed in the item "Assets pledged as security for own liabilities".

Cash collateral advanced (securities borrowing) to the counterparts is recognised on the balance sheet as "Loans to credit institutions" or as "Loans to the public". Cash collateral received (securities lending) from the counterparts is recognised on the balance sheet as "Deposits by credit institutions" or as "Deposits and borrowings from the public".

#### **Repurchase and reverse repurchase agreements**

Securities delivered under repurchase agreements and securities received under reverse repurchase agreements are not derecognised from or recognised on the balance sheet. In the cases where the counterpart has the right to resell or repledge the securities, the securities are reclassified to the balance sheet line "Financial instruments pledged as collateral".

Securities delivered under repurchase agreements are also disclosed in the item "Assets pledged as security for own liabilities".

Cash received under repurchase agreements is recognised on the balance sheet as "Deposits by credit institutions" or as "Deposits and borrowings from the public". Cash delivered under reverse repurchase agreements is recognised on the balance sheet as "Loans to credit institutions" or as "Loans to the public".

Additionally, the sale of securities received in reverse repurchase agreements trigger the recognition of a trading liability (short sale).

#### **Derivatives**

All derivatives are recognised on the balance sheet and measured at fair value. Derivatives with total positive fair values, including any accrued interest, are recognised as assets in the item "Derivatives" on the asset side. Derivatives with total negative fair values, including any accrued interest, are recognised as liabilities in the item "Derivatives" on the liability side.

Realised and unrealised gains and losses from derivatives are recognised in the income statement in the item "Net result from items at fair value".

### **13. Loans to the public/credit institutions**

Financial instruments classified as "Loans to the public/credit institutions" in the balance sheet and into the category Loans and receivables are measured at amortised cost (see also the separate section 7 "Recognition and derecognition of financial instruments in the balance sheet" as well as Note 41 "Classification of financial instruments").

Nordea monitors loans as described in the separate section on Risk, Liquidity and Capital management. Loans attached to individual customers or groups of customers are identified as impaired if the impairment tests indicate an objective evidence of impairment.

Also interest-bearing securities classified into the categories Loans and receivables and Held to maturity are held at amortised cost and the description below is valid also for the identification and measurement of impairment on these assets. Possible impairment losses on interest-bearing securities classified into the categories Loans and receivables and Held to maturity are recognised as "Impairment of securities held as non-current financial assets" in the income statement.

#### **Impairment test of individually assessed loans**

Nordea tests significant loans for impairment on an individual basis. The purpose of the impairment tests is to find out if the loans have become impaired. As a first step in the identification process for impaired loans, Nordea monitors whether there are indicators for impairment (loss event) and whether these loss events represent objective evidence of impairment. More information on the identification of loss events can be found in the Risk, Liquidity and Capital Management section.

In the process to conclude whether there is objective evidence of impairment, an assessment is performed to estimate the most probable future cash flows generated by the customer. These cash flows are then discounted by the effective interest rate giving the net present value. Collaterals received to mitigate the credit risk will be assessed at fair value. If the carrying amount of the loan is higher than the net present value of the estimated future cash flows, including the fair value of the collaterals, the loan is impaired.

Loans that are not individually impaired will be transferred to a group of loans with similar risk characteristics for a collective impairment test.

#### **Impairment test of collectively assessed loans**

All loans not impaired on an individual basis are collectively assessed for impairment, including individually insignificant loans. This means that significant loans not impaired on an individual level and insignificant loans that have not been tested on an individual level are collectively tested for impairment. The loans are grouped on the basis of similar credit risk characteristics that are indicative of the debtors' ability to pay all amounts due according to the contractual terms. Nordea monitors its portfolio through rating migrations, the credit decision and annual review process supplemented by quarterly risk reviews. Through these processes Nordea identifies loss events indicating incurred losses in a group. A loss event is an event resulting in a deterioration of the expected future

cash flows. Only loss events incurred up to the reporting date are included when performing the assessment of the group.

The objective for the group assessment process is to evaluate if there is a need to make a provision due to the fact that a loss event has occurred, which has not yet been identified on an individual basis. This period between the date when the loss event occurred and the date when it is identified on an individual basis is called "Emergence period". The impairment remains related to the group of loans until the losses have been identified on an individual basis. The identification of the loss is made through a default of the engagement or by other indicators.

For corporate customers and bank counterparts, Nordea uses the existing rating system as a basis when assessing the credit risk. Nordea uses historical data on probability of default to estimate the risk for a default in a rating class. These loans are rated and grouped mostly based on type of industry and/or sensitivity to certain macro parameters, e.g. dependency to oil prices etc.

Personal customers and small corporate customers are monitored through scoring models. These are based mostly on historical data, as default rates and loss rates given a default, and experienced judgement performed by management. Rating and scoring models are described in more detail in the separate section on Risk, Liquidity and Capital management.

The collective assessment is performed through a netting principle, i.e. when rated engagements are up-rated due to estimated increases in cash flows, this improvement will be netted against losses on loans that are down-rated due to estimated decreases in cash-flows. Netting is only performed within groups with similar risk characteristics where Nordea assesses that the customers' future cash flows are insufficient to serve the loans in full.

#### **Impairment loss**

If the carrying amount of the loans is higher than the sum of the net present value of estimated cash flows, including the fair value of the collaterals and other credit enhancements, the difference is the impairment loss.

If the impairment loss is not regarded as final, the impairment loss is accounted for on an allowance account representing the accumulated impairment losses. Changes in the credit risk and accumulated impairment losses are accounted for as changes in the allowance account and as "Net loan losses" in the income statement (see also section 6 "Recognition of operating income and impairment").

If the impairment loss is regarded as final, it is reported as a realised loss. A realised loss is recognised and the value of the loan and the related allowance for impairment loss are derecognised with a corresponding gain or loss recognised in the line item "Net loan losses" in the income statement. An impairment loss is regarded as final when the obligor is filed for bankruptcy and the administrator has declared the economic outcome of the bankruptcy procedure, or when Nordea forgives its claims either through a legal based or voluntary reconstruction or when Nordea, for other reasons, deem it unlikely that the claim will be recovered.

#### **Discount rate**

The discount rate used to measure impairment is the original effective interest rate for loans attached to an individual customer or, if applicable, to a group of loans. If considered appropriate, the discount rate can be based on a method that results in an impairment that is a reasonable approximation of using the effective interest rate method as basis for the calculation.

#### **Restructured loans**

In this context a restructured loan is defined as a loan where Nordea has granted concessions to the obligor due to its deteriorated financial situation and where this concession has resulted in an impairment loss for Nordea. After a reconstruction the loan is normally regarded as not impaired if it performs according to the new conditions. Concessions made in reconstructions are regarded as final losses unless Nordea retains the possibility to regain the realised loan losses incurred. In the event of a recovery the payment is reported as a recovery of realised loan losses.

#### **Assets taken over for protection of claims**

In a financial reconstruction the creditor may concede loans to the obligor and in exchange for this concession acquires an asset pledged for the conceded loans, shares issued by the obligor or other assets. Assets taken over for protection of claims are reported on the same balance sheet line as similar assets already held by Nordea. For example a property taken over, not held for Nordea's own use, is reported together with other investment properties.

At initial recognition, all assets taken over for protection of claims are recognised at fair value and the possible difference between the carrying amount of the loan and the fair value of the assets taken over is recognised as "Net loan losses". The fair value of the asset on the date of recognition becomes its cost or amortised cost value, as applicable. In subsequent periods, assets taken over for protection of claims are valued in accordance with the valuation principles for the appropriate type of asset. Investment properties are then measured at fair value. Financial assets that are foreclosed are generally classified into the categories

Available for sale or Designated at fair value through profit or loss (Fair Value Option) (see section 12 "Financial instruments") and measured at fair value. Changes in fair values are recognised in other comprehensive income for assets classified into the category Available for sale. For assets classified into the category Designated at fair value through profit or loss, changes in fair value are recognised in the income statement under the line "Net result from items at fair value".

Any change in value, after the initial recognition of the asset taken over, is presented in the income statement in line with the Group's presentation policies for the appropriate asset. "Net loan losses" in the income statement is, after the initial recognition of the asset taken over, consequently not affected by any subsequent remeasurement of the asset.

## **14. Leasing**

### **NBF as lessor**

#### *Finance leases*

Nordea's leasing operations mainly comprise finance leases. A finance lease is reported as a receivable from the lessee in the balance sheet item "Loans to the public" at an amount equal to the net investment in the lease. The lease payment, excluding cost of services, is recorded as repayment of principal and interest income. The income allocation is based on a pattern reflecting a constant periodic return on the net investment outstanding in respect of the finance lease.

#### *Operating leases*

Assets subject to operating leases in the balance sheet are reported in accordance with the nature of the assets, in general as property and equipment. Leasing income is recognised as income on a straight-line basis over the lease term and classified as "Net interest income". The depreciation of the leased assets is calculated on the basis of Nordea's depreciation policy for similar assets and reported as "Depreciation, amortisation and impairment charges of tangible and intangible assets" in the income statement.

### **NBF as lessee**

#### *Finance leases*

No leases in NBF have been classified as finance leases.

#### *Operating leases*

Operating leases are not recognised in NBF's balance sheet. For operating leases the lease payments are recognised as expenses in the income statement on a straight-line basis over the lease term unless another systematic way better reflects the time pattern of NBF's benefit. The original lease terms range between 3 to 25 years.

Operating leasing is mainly related to office premises contracts and office equipment contracts normal to the business.

The central district properties in Finland, Norway and Sweden that Nordea has divested are leased back. The duration of the lease agreements were initially 3-25 years with renewal options. The lease agreements include no transfers of ownerships of the asset by the end of the lease term, nor any economic benefits from appreciation in value of the leased property. In addition, the lease term is not for the major part of the assets' economic life. These leases are thus classified as operating leases. The rental expense for these premises is recognised on the basis of the time-pattern of Nordea's economic benefit which differs from the straight-line basis and better resembles an ordinary rental arrangement.

#### *Embedded leases*

Agreements can contain a right to use an asset in return for a payment, or a series of payments, although the agreement is not in the legal form of a leasing contract. If applicable, these assets are separated from the contract and accounted for as leased assets.

## **15. Intangible assets**

Intangible assets are identifiable, non-monetary assets without physical substance. The assets are under NBF's control, which means that NBF has the power and rights to obtain the future economic benefits flowing from the underlying resource. The intangible assets in NBF mainly consist of goodwill, IT-development/computer software and customer related intangible assets.

#### **Goodwill**

Goodwill represents the excess of the cost of an acquisition over the fair value of Nordea's share of net identifiable assets of the acquired group undertaking/associated undertaking at the date of acquisition. Goodwill on acquisition of group undertakings is included in "Intangible assets". Goodwill on acquisitions of associates is not recognised as a separate asset, but included in "Investments in associated undertakings". Goodwill is tested annually for impairment, or more frequently if events or changes in circumstances indicate that it might be impaired. Goodwill is carried at cost less accumulated impairment losses. Impairment losses on goodwill cannot be reversed in subsequent periods. Goodwill related to associated companies is not tested for impairment separately, but included in the total carrying amount of the associated company. The policies covering impairment testing of associated companies is disclosed in section 6 "Recognition of operating income and impairment".

#### **IT-development/Computer software**

Costs associated with maintaining computer software programs are expensed as incurred. Costs directly associated with major software development investments, with a useful life of three years or more and the ability to generate future economic benefits, are recognised as intangible assets. These costs include software development staff costs and overhead expenditures directly attributable to preparing the asset for use. Computer software includes also acquired software licenses not related to the function of a tangible asset.

Amortisation is calculated on a straight-line basis over the useful life of the software, generally a period of 3 to 10 years.

#### **Customer related intangible assets**

In business combinations a portion of the purchase price is normally allocated to a customer related intangible asset, if the asset is identifiable and under Nordea's control. An intangible asset is identifiable if it arises from contractual or legal rights, or is separable. The asset is amortised over its useful life.

#### **Impairment**

Goodwill and other intangible assets with indefinite useful lives are not amortised but tested for impairment annually irrespective of any indications of impairment. Impairment testing is also performed more frequently if required due to any indication of impairment. The impairment charge is calculated as the difference between the carrying amount and the recoverable amount.

At each balance sheet date, all intangible assets with definite useful lives are reviewed for indications of impairment. If such indications exist, an analysis is performed to assess whether the carrying amount of the intangible asset is fully recoverable.

The recoverable amount is the higher of fair value less costs to sell and the value in use of the asset or the cash-generating unit, which is defined as the smallest identifiable group of assets that generates cash inflows in relation to the asset. For goodwill, the cash generating units are defined as the operating segments. The value in use is the present value of the cash flows expected to be realised from the asset or the cash-generating unit. The cash flows are assessed based on the asset or cash-generating unit in its current condition and discounted at a rate based on the long-term risk free interest rate plus a risk premium (post tax). If the recoverable amount is less than the carrying amount, an impairment loss is recognised. See note 22 "Intangible assets" for more information on the impairment testing.

## 16. Property and equipment

Property and equipment includes own-used properties, leasehold improvements, IT equipment, furniture and other equipment. Items of property and equipment are measured at cost less accumulated depreciation and accumulated impairment losses. The cost of an item of property and equipment comprise of its purchase price, as well as any directly attributable costs of bringing the asset to the working condition for its intended use. When parts of an item of property and equipment have different useful lives, they are accounted for as separate items.

Property and equipment is depreciated on a straight-line basis over the estimated useful life of the assets. The estimates of the useful life of different assets are reassessed on a yearly basis. Below follows the current estimates:

- Buildings: 30-75 years
- Equipment: 3-5 years
- Leasehold improvements: Changes within buildings the shorter of 10 years and the remaining leasing term. New construction the shorter of the principles used for owned buildings and the remaining leasing term. Fixtures installed in leased properties are depreciated over the shorter of 10–20 years and the remaining leasing term.

At each balance sheet date, Nordea assesses whether there is any indication that an item of property and equipment may be impaired. If any such indication exists, the recoverable amount of the asset is estimated and any impairment loss is recognised.

Impairment losses are reversed if the recoverable amount increases. The carrying amount is then increased to the recoverable amount, but cannot exceed the carrying amount that would have been determined had no impairment loss been recognised.

## 17. Investment property

Investment properties are primarily properties held to earn rent and/or capital appreciation. Nordea applies the fair value model for subsequent measurement of investment properties. The best evidence of a fair value is normally given by quoted prices in an active market for similar property in the same location and condition. As these prices are rarely available discounted cash flow projection models based on reliable estimates of future cash flows are also used.

Net rental income, gains and losses as well as fair value adjustments are recognised directly in the income statement as “Net result from items at fair value”.

## 18. Taxes

The item “Income tax expense” in the income statement comprises current- and deferred income tax. The income tax expense is recognised in the income statement, except to the extent the tax effect relates to items recognised in other comprehensive income or directly in equity, in which case the tax effect is recognised in other comprehensive income or in equity respectively.

Current tax is the expected tax expense on the taxable income for the year, using tax rates enacted or substantively enacted at the reporting date, and any adjustment to tax payable in respect of previous years.

Deferred tax assets and liabilities are recognised, using the balance sheet method, for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. Deferred tax assets are recognised for the carry forward of unused tax losses and unused tax credits. Deferred tax is not recognised for temporary differences arising on initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable profit, nor for differences relating to investments in subsidiaries and associated companies to the extent that it is probable that they will not reverse in the foreseeable future. In addition, deferred tax is not recognised for taxable temporary differences arising on the initial recognition of goodwill.

Deferred tax is measured at the tax rates that are expected to be applied to the temporary differences when they reverse, based on the laws that have been enacted or substantively enacted at the reporting date. Deferred tax assets and liabilities are not discounted. A deferred tax asset is recognised only to the extent that it is probable that future taxable profits will be available against which the temporary differences, tax losses carry forward and unused tax credits can be utilised. Deferred tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable that the related tax benefit will be realised.

Current tax assets and current tax liabilities are offset when the legal right to offset exists. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset current tax liabilities and assets.

## 19. Employee benefits

All forms of consideration given by Nordea to its employees as compensation for services performed are employee benefits. Short-term benefits are to be settled within twelve months after the reporting period when the services have been performed. Post-employment benefits are benefits payable after the termination of the employment. Post-employment benefits in Nordea consist only of pensions. Termination benefits normally arise if an employment is terminated before the normal retirement date, or if an employee accepts an offer of voluntary redundancy.

### Short-term benefits

Short term benefits consist mainly of fixed and variable salary. Both fixed and variable salaries are expensed in the period when the employees have performed services to Nordea. Nordea has also issued share-based payment programmes, which are further described in section 22 "Share-based payments".

More information can be found in Note 8 "Staff costs".

### Post-employment benefits

#### *Pension plans*

The companies within Nordea have various pension plans, consisting of both defined benefit plans and defined contribution plans, reflecting national practices and conditions in the countries where Nordea operates. Defined benefit plans are predominantly sponsored in Sweden, Norway and Finland. The major defined benefit plans are funded schemes covered by assets in pension funds/foundations. If the fair value of plan assets, associated with a specific pension plan, is lower than the gross present value of the defined benefit obligation, the net amount is, after adjusting for unrecognised actuarial gains/losses, recognised as a liability (defined benefit obligation). If not, the net amount is recognised as an asset (defined benefit asset). Non-funded pension plans are recognised as defined benefit obligations.

Certain Finnish plans are based on defined contribution arrangements that hold no pension liability for NBF. Nordea also contributes to public pension systems.

#### *Pension costs*

The pension calculations are carried out by country and by pension plan in accordance with IAS 19.

Obligations for defined contribution pension plans are recognised as an expense as the employee renders services to the entity and the contribution payable in exchange for that service becomes due. Nordea's net obligation for defined benefit pension plans is

calculated separately for each plan by estimating the amount of future benefit that employees have earned for their service in the current and prior periods. That benefit is discounted to determine its present value. Any unrecognised prior service cost and the fair value of any plan assets are deducted. Actuarial calculations, performed annually, are applied to assess the present value of defined benefit obligations and related costs, based on several actuarial and financial assumptions (as disclosed in Note 34 "Retirement benefit obligations").

When establishing the present value of the obligation and the fair value of any plan assets, actuarial gains and losses may arise as a result of changes in actuarial assumptions and experience effects (actual outcome compared to assumptions). The actuarial gains and losses are not recognised immediately in the income statement. Rather, only when the net cumulative unrecognised actuarial gain or loss exceeds a "corridor" equal to 10 percent of the greater of either the present value of the defined benefit obligation or the fair value of the plan assets, the excess is recognised in the income statement over the expected average remaining service period of the employees participating in the plan. Otherwise, actuarial gains and losses are not recognised.

When the calculation results in a benefit to the Nordea entity, the recognised asset is limited to the net total of any unrecognised actuarial losses, unrecognised past service costs and the present value of any future refunds from the plan or reductions in future contributions to the plan.

Social security contribution is calculated and accounted for based on the net recognised surplus or deficit by plan.

#### *Discount rate in Defined Benefit Plans*

The discount rate is determined by reference to high quality corporate bonds, where a deep enough market for such bonds exists. Covered bonds are in this context considered to be corporate bonds. In countries where no such market exists the discount rate is determined by reference to government bond yields. In Finland the discount rate is determined with reference to corporate bonds.

### Termination benefits

As mentioned above termination benefits normally arise if an employment is terminated before the normal retirement date, or if an employee accepts an offer of voluntary redundancy.

Termination benefits do not arise if the employees have to continue performing services and the termination benefits can be considered to be normal compensation for those services.

Termination benefits are expensed when Nordea has an obligation to make the payment. An obligation arises when there is a formal plan committed to on the appropriate organisational level and when Nordea is without realistic possibility of withdrawal, which normally occurs when the plan has been communicated to the group affected or to their representatives.

Termination benefits can include both short-term benefits, for instance a number of months' salary, and post-employment benefits, normally in the form of early retirement. Short-term benefits are classified as "Salaries and remuneration" and post-employment benefits as "Pension costs" in Note 8 "Staff costs".

## **20. Equity**

### **.Non-controlling interests**

Non-controlling interests comprise the portion of net assets of group undertakings not owned directly or indirectly by Nordea Bank Finland Plc.

### **.Share premium reserve**

The share premium reserve consists of the difference between the subscription price and the quota value of the shares in NBF's rights issue. Transaction costs in connection to the rights issue have been deducted.

### **.Other reserves**

Other reserves comprise income and expenses, net after tax effects, which are reported in equity in accordance with IFRS. These reserves include fair value reserves for financial assets classified into the category Available for sale as well as a reserve for translation differences.

### **.Retained earnings**

Apart from undistributed profits from previous years, retained earnings include the equity portion of untaxed reserves. Untaxed reserves according to national rules are recorded as equity net of deferred tax at prevailing tax rates in the respective country.

In addition, NBF's share of the earnings in associated companies, after the acquisition date, that have not been distributed is included in retained earnings.

### **.Treasury shares**

NBF does not hold Treasury shares.

## **21. Financial guarantee contracts and credit commitments**

Upon initial recognition, premiums received in issued financial guarantee contracts and credit commitments are recognised as prepaid income on the balance sheet. The guarantees and irrevocable credit commitments are subsequently measured, and recognised on the balance sheet, at the higher of either the received fee less amortisation, or a provision calculated as the discounted best estimate of the expenditure required to settle the present obligation. Changes in provisions are recognised in the income statement in the item "Net loan losses".

Premiums received for financial guarantees are, as stated in section 6 "Recognition of operating income and impairment", amortised over the guarantee period and recognised as "Fee and commission income" in the income statement. Premiums received on credit commitments are generally amortised over the loan commitment period. The contractual amounts are recognised off-balance sheet, financial guarantees in the item "Contingent liabilities" and irrevocable credit commitments in the item "Commitments".

## **22. Share-based payments**

### **Equity-settled programmes**

Nordea has annually issued Long Term Incentive Programmes from 2007 through 2011. Employees participating in these programmes are granted share-based and equity-settled rights, i.e. rights to receive shares for free or to acquire shares in Nordea at a significant discount compared to the share price at grant date. The value of such rights shall be expensed. The expense is based on the estimated fair value of each right at grant date. The total fair value of these rights is determined based on the group's estimate of the number of rights that will eventually vest, which is reassessed at each reporting date, and is expensed on a straight-line basis over the vesting period. The vesting period is the period that the employees have to remain in service in Nordea in order for their rights to vest. Market performance conditions in D-rights /Performance Share II are reflected as a probability adjustment to the initial estimate of fair value at grant date. There is no adjustment (true-up) for differences between estimated and actual vesting due to market conditions.

For more information see Note 8 "Staff costs".

**Cash-settled programmes**

Nordea has to defer payment of variable salaries under Nordic FSA's regulations and general guidelines. The deferred amounts are to some extent indexed using Nordea's TSR (Total Shareholders' Return) and these "programmes" are cash-settled share-based programmes under IFRS. These programmes are fully vested when the variable salaries are initially deferred and the fair value of the obligation is remeasured on a continuous basis. The remeasurements are, together with the related social charges, recognised in the income statement in the item "Net result from items at fair value".

**23. Related party transactions**

NBF defines related parties as:

- Shareholders with significant influence
- Group undertakings
- Associated undertakings
- Key management personnel
- Other related parties

All transactions with related parties are made on an arm's length basis.

**.Shareholders with significant influence**

Shareholders with significant influence are shareholders that, by any means, have a significant influence over NBF. Nordea and its group companies are considered as having such significant influence.

**.Group undertakings**

For the definition of Group undertakings see section 5 "Principles of consolidation". Further information on the undertakings included in the NBF Group is found in Note 20 "Investments in group undertakings".

Group internal transactions between legal entities are performed according to arm's length principles in conformity with OECD requirements on transfer pricing. These transactions are eliminated in the consolidated accounts.

**.Associated undertakings**

For the definition of Associated undertakings see section 5 "Principles of consolidation".

Further information on the associated undertakings included in the NBF Group is found in Note 21 "Investments in associated undertakings".

**.Key management personnel**

Key management personnel include the following positions:

- The Board of Directors of NBF and Nordea Bank AB (publ)
- The Chief Executive Officer (CEO)
- The Group Executive Management (GEM).

For information about compensation, pensions and other transactions with key management personnel, see Note 8 "Staff costs".

**.Other related parties**

Other related parties comprise close family members to individuals in key management personnel. Other related parties also include companies significantly influenced by key management personnel in Nordea Group as well as companies significantly influenced by close family members to these key management personnel. Other related parties also include NBF's pension foundations.

Information concerning transactions between NBF and other related parties is found in Note 45 "Related-party transactions".

## Note 2 Segment reporting

### Operating segments

#### Group

#### Measurement of Operating segments' performance

The measurement principles and allocation between operating segments follow the information reported to the Chief Operating Decision Maker (CODM), as required by IFRS 8. In NBF the CODM has been defined as Group Executive Management. The main differences compared to the business area reporting are that the information to CODM is prepared using plan rates.

#### Changes in basis of segmentation

A new organisation has been established, developed around the two main business areas Retail Banking and Wholesale Banking. In addition a business unit called Group Operations has been established. Group Corporate Centre and the separate divisions within the two main business areas and within the business unit Group Operations have, based on the new organisation, been identified as operating segments. The changes compared to the previous segment reporting is mainly that Nordic Banking has been renamed to Retail Banking Nordic and that the service units and support functions within the main business areas Retail Banking and Wholesale Banking are now disclosed separately as operating segments named as Retail Banking Other and Wholesale Banking Other. A new operating segment named Corporate & institutional Banking has been established, including the former division Corporate Merchant Banking, previously included in Nordic Banking, and the former operating segment Financial Institutions. Capital Markets unallocated and Group Corporate Centre are furthermore disclosed separately as operating segments. Comparative information has been restated accordingly.

#### Reportable Operating segments

Retail Banking conducts a full service banking operation and offers a wide range of products. It is Nordea's largest customer area and serves household customers and corporate customers in the Nordic markets (Retail Banking Nordic) as well as in Poland and the Baltic countries (Retail Banking Poland & Baltic countries). Wholesale Banking provides banking and other financial solutions to large Nordic and international corporate, institutional and public companies. The division Corporate & Institutional Banking is a customer oriented organisation serving the largest globally operating corporates. This division is also responsible for Nordea's customers within the financial sector, and offers single products such as funds, equity products etcetera as well as consulting services within asset allocation and fund sales. The division Shipping, Oil Services & International is responsible for Nordea's customers within the shipping, offshore and oil services industries and provides tailored solutions and syndicated loan transactions. Capital Markets unallocated includes the result in Capital Markets which is not allocated to the main business areas. Group Corporate Centre's main objective is to manage the Group's funding and to support the management and control of the NBF Group. The main income in Group Corporate Centre originates from Group Treasury.

|                                                                                     | Retail Banking |              | Wholesale Banking |              | Group Corporate Centre |            |

**Loans to key management personnel**

Loans to key management personnel amounts to EUR 1m (2) in the Group and EUR 1m (2) in the parent company. Interest income on these loans amounts to EUR 0m (0) in the Group and EUR 0m (0) in the parent company.

Terms and conditions regarding loans for key management personnel employed by Nordea are decided in accordance with instructions issued by the Board of Directors. Loans to family members of key management personnel are granted on normal market terms, as well as loans to key management personnel who are not employees of Nordea. In Finland the employee interest rate for loans corresponds to Nordea's funding cost with a margin of 10 basis points up to EUR 400,000, and 30 basis points for loans over EUR 400,000.

The Group has not pledged any assets or other collateral or committed to contingent liabilities on behalf of any key management personnel.

<sup>1</sup> The new rights issue, which was resolved on an extra ordinary general meeting on 12 March 2009, triggered recalculations of some of the parameters in LTIP 2007 and LTIP 2008, in accordance with the agreements of the programmes. The recalculations were performed with the purpose of putting the participants in an equivalent financial position as the one being at hand immediately prior to the new rights issue.

**Conditions and requirements**

For each ordinary share the participants lock in to the LTIPs, they are granted a conditional A-right/Matching Share to acquire or receive ordinary shares based on continued employment and the conditional B-D-rights/Performance Share I and II to acquire or receive additional ordinary shares based on fulfilment of certain performance conditions. The performance conditions for B- and C-rights and for Performance Share I comprise a target growth in risk adjusted profit per share (RAPPS). Should the reported earnings per share (EPS) be lower than a predetermined level the participants are not entitled to exercise any B- or C-rights or Performance Share I. The performance conditions for D-rights and for Performance Share II are ~~is~~ market related and comprise growth in total shareholder return (TSR) in comparison with a peer group's TSR.

When the performance conditions are not fully fulfilled, the rights that are no longer exercisable are shown as forfeited in the previous tables, as well as shares forfeited due to participants leaving the Nordea Group.

The exercise price, where applicable, for the ordinary shares is adjusted for dividends, however never adjusted below a predetermined price. Furthermore the profit for each right is capped.

Full right to exercise was obtained if Nordea was ranked number 1. | TSR during 2007-2008 in comparison to a peer group. Full right to exercise was obtained if Nordea's TSR exceeded peer group index with 10% or more. |
| Cap                              | The profit per A-D-rights is capped to EUR 9.59 per right.                                                                | The profit per A-D-rights is capped to EUR 21.87 per right.                                                            | The profit per A-D-rights is capped to EUR 19.18 per right.                                                                                         |
| Exercise price adjustments       | The exercise price will be adjusted for dividends during the exercise period, however never adjusted below EUR 0.10.      | The exercise price will be adjusted for dividends during the exercise period, however never adjusted below EUR 0.10.   | The exercise price will be adjusted for dividends during the vesting period and the exercise period, however never adjusted below EUR 0.10.         |

<sup>1</sup> RAPPS for the financial year 2008 used for LTIP 2008 (C-rights) and LTIP 2009 (B-rights), RAPPS for the financial year 2009 used for LTIP 2009 (C-rights), EPS knock out in LTIP 2008 (C-rights) and LTIP 2009 (B- and C-rights) and the cap in LTIP 2009, LTIP 2008 and LTIP 2007 has been adjusted due to the financial effects of the new rights issue in 2009.

**Note 8 Staff costs, cont.****Fair value calculations**

The fair value is measured through the use of generally accepted valuation models with the following input factors:

|                                   | LTIP 2011 | LTIP 2010 | LTIP 2009 | LTIP 2008 | LTIP 2007 |
|-----------------------------------|-----------|-----------|-----------|-----------|-----------|
| Weighted average share price, EUR | 8.39      | 6.93      | 5.79      | 11.08     | 12.33     |
| Right life, years                 | 3.0       | 3.0       | 2.5       | 2.5       | 3.0       |
| Deduction of expected dividends   | No        | No        | Yes       | Yes       | Yes       |
| Risk free rate, %                 | 1.48      | 1.99      | 1.84      | 3.83      | 4.20      |
| Expected volatility, %            | 36        | 40        | 29        | 21        | 20        |

Expected volatility is based on historical values. As the exercise price (zero for LTIP 2010) is significantly below the share price at grant date, the value has a limited sensitivity to expected volatility and risk-free interest. The fair value calculations are also based on estimated early exercise behaviour during the programme's exercise windows, however not applicable for LTIP 2010 and LTIP 2011.

The value of the D-rights/Performance Share II are based on market related conditions and fulfilment of the TSR targets has been taken into consideration when calculating the right's fair value at grant. When calculating the impact from the TSR target it has been assumed that all possible outcomes have equal possibilities.

<sup>1</sup> All amounts excluding social charges

When calculating the expected expense an expected annual employee turnover of 5% has been used in LTIP 2010 and LTIP 2011. The expected expense is recognised over the vesting period of 36 months (LTIP 2010 and LTIP 2011) and 24 months (LTIP 2009, 2008 and 2007).

**Cash-settled share-based payment transaction**

Since 2009 Nordea operates share-linked deferrals on parts of variable compensation for certain employee categories, indexed with Nordea Total Shareholder Returns (TSR) and either vesting after three years or vesting in equal instalments over a three-year period. Since 2011 Nordea also operates TSR-linked retention on part of variable compensation for certain employee categories.

There were no unrecognised deferred tax assets in the Group nor in the parent company in 2011 or 2010.

There was no deferred tax relating to temporary differences associated with investments in group undertakings, associated undertakings and joint ventures.

Deferred income tax assets and liabilities are offset when there is a legally enforceable right to offset current tax assets against current tax liabilities, when the deferred tax income relates to the same fiscal authority.

**Note 16 Financial instruments pledged as collateral****Financial instruments pledged as collateral**

In repurchase transactions and in securities lending transactions, non-cash assets are transferred as collateral. When the counterpart receiving the collateral has the right to sell or repledge the assets, the assets are reclassified in the balance sheet to the item Financial instruments pledged as collateral.

**Transferred assets that are still recognised in the balance sheet and associated liabilities**

All assets transferred and the liabilities associated with these transactions are specified in the following tables. The assets continue to be recognised on the balance sheet since NBF is still exposed to changes in the fair value of the assets. Therefore, these assets and its associated liabilities are included in the tables below.

The carrying amount at end of year represents accumulated changes in the fair value for those repricing time periods in which the hedged item is an asset respectively a liability. When the hedged item is an asset, the change in the fair value of the hedged item is presented within assets and when the hedged item is a liability, the change is presented as a liability.

The total amount is expected to be settled after more than 1 year.

## Note 24 Leasing

### NBF as a lessor

#### Finance leases

Nordea Bank Finland Group owns assets leased to customers under finance lease agreements. Finance lease agreements are reported as receivables from the lessee included in "Loans to the public" (see Note 14) at an amount equal to the net investment in the lease. The leased assets mainly comprise vehicles, machinery and other equipment.

Reconciliation of gross investments and present value of future minimum lease payments:

| EURm                                                                      | Group          |                |

- of which expected to be settled within 1 year

Provision for restructuring costs amounts to EUR 33m and relates mainly to group initiatives including a provision of EUR 27m for New Normal (of which EUR 9m expected to be settled during 2012).

Provision for Transfer risk is related to off-balance sheet items. Transfer risk relating to loans is included in the item Allowances for collectively assessed impaired loans in Note 14. Provision for Transfer risk is depending on the volume of business with different countries.

Loan loss provisions for individually assessed, guarantees and other commitments amounted to EUR 38m.

Other provision refers to the following provisions: Rental liabilities EUR 3m (of which EUR 0m expected to be settled during 2012), provision for environmental and property-related obligations of EUR 3m (not expected to be settled during 2012) and other provisions amounting to EUR 11m (not expected to be settled during 2012).

- of which expected to be settled within 1 year

Provision for restructuring costs amounts to EUR 33m and relates mainly to group initiatives including a provision of EUR 27m for New Normal (of which EUR 9m expected to be settled during 2012).

Provision for Transfer risk is related to off-balance sheet items. Transfer risk relating to loans is included in the item Allowances for collectively assessed impaired loans in Note 14. Provision for transfer risk is depending on the volume of business with different countries.

Loan loss provisions for individually assessed, guarantees and other commitments amounted to EUR 38m.

Other provision refers to the following provisions: Rental liabilities EUR 3m (of which EUR 0m expected to be settled during 2012), provision for environmental and property-related obligations of EUR 3m (not expected to be settled during 2012) and other provisions amounting to EUR 8m (not expected to be settled during 2012).

**Note 34 Retirement benefit obligations**

| <b>Total</b>               | <b>-94</b>     | <b>-77</b>     | <b>-88</b>     | <b>-70</b>     |

NBF has various pension plans, which are classified both as defined benefit plans as well as defined contribution plans. The defined benefit plans in Finland are closed to new employees and instead, pensions for new employees are based on defined contribution arrangements. The plans for the foreign branches are also mainly defined contribution plans. The existing defined benefit plans in London and New York are closed to new employees. Defined contribution plans are not reflected on the balance sheet.

IAS 19 secures that the market-based value of pension obligations net of plan assets backing these obligations will be reflected on the Group's balance sheet. The major plans are funded schemes covered by assets in pension funds/foundations. Some other pension plans are recognised directly on the balance sheet as a liability.

| <b>Funded schemes <sup>1</sup></b> | Group  | Parent company |
|------------------------------------|--------|----------------|
| <b>2011</b>                        |        |                |

| Average member age                 | 64     | 64             |
| <b>2010</b>                        |        |                |
| Members                            | 19,035 | 18,394         |
| Average member age                 | 61     | 61             |

<sup>1</sup> Numbers are combined for the Finnish pension fund and pension foundation, Life Assurance Finland Ltd and London plans.

**IAS 19 pension calculations and assumptions**

Calculations on major plans are performed by external liability calculators and are based on the actuarial assumptions fixed for each of the Group's pension plans.

| Assumptions                            | Finland |
|----------------------------------------|---------|
| <b>2011</b>                            |         |
| Discount rate                          | 4.5%    |
| Salary increase                        | 3.5%    |
| Inflation                              | 2.0%    |
| Expected return on assets before taxes | 5.5%    |
| <b>2010</b>                            |         |
| Discount rate                          | 4.5%    |
| Salary increase                        | 3.5%    |
| Inflation                              | 2.0%    |
| Expected return on assets before taxes | 5.5%    |

The expected return on assets is based on long-term expectations for return on the different asset classes. On bonds, this is linked to the discount rate while equities and real estate have an added risk premium.

The discount rate has the most significant impact on the obligation and pension cost. If the discount rate is reduced the pension obligation will increase and vice versa. A one percentage point increase in the discount rate would lead to a decrease in pension obligation of 12% and in service cost of 29%. A one percentage point decrease in the discount rate would lead to an increase in pension obligation of 14% and in service cost of 3%.

**Asset composition**

The combined return on assets in 2011 was 0% (8) mainly reflecting the general development in the market. At the end of the year, the equity exposure in pension funds/foundations represented 20% (24) of total assets.

| Asset composition in funded schemes | 2011 | 2010 |
|-------------------------------------|------|------|
| Equity                              | 20%  | 24%  |
| Bonds                               | 67%  | 70%  |
| Real Estate                         | 11%  | 6%   |
| - of which Nordea real estate       | 3%   | 3%   |
| Other plan assets                   | 2%   | 0%   |

**Note 34 Retirement benefit obligations, cont.****Defined benefit pension cost**

The total net pension cost related to defined benefit plans recognised in the Group's income statement (as staff costs) for the year 2011 is EUR 7m positive (4m positive). In the parent company's income statement the respective cost was EUR 7m positive (4m positive) in 2011.

Total pension costs comprise defined benefit pension costs as well as costs related to defined contribution plans. (See specification in Note 8.)

| Recognised net defined benefit cost, EURm    | Group     |           | Parent company |           |
|----------------------------------------------|-----------|-----------|----------------|-----------|
|                                              | 2011      | 2010      | 2011           | 2010      |
| Service cost                                 | 3         | 2         | 3              | 2         |
| Interest cost                                | 33        | 34        | 32             | 33        |
| Expected return on assets                    | -44       | -42       | -43            | -41       |

| Recognised past service cost                 | 0         | 1         | 0              | 1         |
| Recognised actuarial gains(-) / losses       | 1         | 1         | 1              | 1         |
| <b>Pension cost on defined benefit plans</b> | <b>-7</b> | <b>-4</b> | <b>-7</b>      | <b>-4</b> |

The pension cost is in line with what was expected at the start of the year. The net pension cost on defined benefit plans is expected to be 8m positive both in the Group and in the parent company in 2012.

The Group and parent company expect to contribute EUR 10m to its defined benefit plans in 2012.

**Key management personnel**

The members of the Board of Directors of Nordea Bank Finland Plc and the Chief Executive Officer are all members of the Nordea Bank AB (publ) Group Executive Management. In 2011 Nordea Bank AB (publ) has paid all salaries, fees, pensions- and other staff-related expenses to the above mentioned members of the administrative and controlling boards. Nordea Bank AB (publ) has allocated these salary expenses to Nordea Bank Finland Plc as part of the Head Office Allocation -expenses.

Information on salaries, loans and pension liabilities regarding the above mentioned persons is presented in the Annual Report of Nordea Bank AB (publ).

Pension obligation for the deputy of the President of Nordea Bank Finland Plc amounted to EUR 1m at end 2011.

**Note 35 Subordinated liabilities**

| EURm                                 | Group          |                | Parent company |                |
|--------------------------------------|----------------|----------------|----------------|----------------|

<sup>1</sup> Relates only to securities recognised in the balance sheet. Securities borrowed or bought under repurchase agreements are not recognised in the balance sheet and thus not included in the amount. Such transactions are disclosed in Note 43 Obtained collaterals which are permitted to be sold or repledged.

Assets pledged for own liabilities contain securities pledged as security in repurchase agreement and in securities lending. The transactions are conducted under standard agreements employed by financial markets participants. Counterparts in those transactions are credit institutions and the public. The transactions are typically short term with maturity within three months. Loans to the public amounting to EUR 11,919m (9,636) have been registered as collateral for issued Finnish covered bonds amounting to EUR 7,250m (1,987). In the event of the company's insolvency, the holders of these bonds have priority to the assets registered as collateral. Collaterals are valued up to the first 70% of the market value of the property. Nordea Bank has used Realia Oy, Newsec Oy, Huoneistokeskus Oy, Kiinteistömaailma Oy and Catella Oy to value commercial real estate collaterals.

**Note 37 Other assets pledged**

There are no collaterals pledged on behalf of other items other than the company's own liabilities.

**Note 38 Contingent liabilities**

In the normal business of Nordea Bank Finland, the bank issues various forms of guarantees in favour of bank's customers. Loan guarantees are given for customers to guarantee obligations in other credit- and pension institutions. Other guarantees consist mainly of commercial guarantees such as bid guarantees, advance payment guarantees, warranty guarantees and export related guarantees. Contingent liabilities also include unutilised irrevocable import documentary credits and confirmed export documentary credits. These transactions are part of the bank services and support the bank's customers. Guarantees and documentary credits are considered as off-balance sheet items, unless there is a need for a provision to cover a probable loan loss that arises from the judgement that reimbursement will not be received.

<sup>1</sup> Including unutilised portion of approved overdraft facilities of EUR 9,197m (9,518) for the Group and EUR 9,198m (9,524) for the parent company.

Reverse repurchase agreements are recognised on and derecognised from the balance sheet on settlement date. Nordea has as per 31 December 2011 signed reverse repurchase agreements of EUR 10,417m that have not yet been settled and consequently are not recognised on the balance sheet. On settlement date these reverse repurchase agreements will, to the utmost extent, replace existing reverse repurchase agreements not yet derecognised as per 31 December 2011. The net impact on the balance sheet is minor. These instruments have not been disclosed as commitments.

<sup>1</sup> Note that the comparison figures are not restated with respect to CRD III.

With the adoption of the CRD III amendment, new risk types under the internal approach have been introduced. For Nordea Bank Finland this includes additional capital charge for stressed VaR, incremental and comprehensive risk. In addition, under the Standardised Approach the risk weights for specific equity risk have increased. The total CRD III impact for Nordea Bank Finland is an increase of EUR 4,549m in market risk RWA.

More Capital Adequacy information for the Group can be found in the section Risk, Liquidity and Capital management in the Directors' Report.

**Note 41 Classification of financial instruments, cont..****Changes in fair values attributable to changes in credit risk**

The financial liabilities designated at fair value through profit or loss are related to the funding of the Markets operation. The funding of Markets is generally of such a short term nature that the effect of changes in own credit risk is not significant.

**Comparison of carrying amount and contractual amount to be paid at maturity**

**Note 42 Assets and liabilities at fair value, cont.****Estimation of fair value for assets and liabilities**

Financial assets and financial liabilities in the balance sheet are generally measured at fair value, with the exception of loans, deposits and borrowings and issued securities.

The carrying amounts on loans, deposits and borrowings and issued securities are adjusted for the value of the fixed interest term, unless the interest rate is hedged, in order to estimate the fair values that are presented in the tables above. The value of the fixed interest term is a result of changes in the relevant market interest rates. The discount rates used are based on current market rates for each term. The fair value of the hedged interest rate risk is included in the balance sheet item "Fair value changes of the hedged items in portfolio hedge of interest rate risk".

Fair value is estimated to be equal to the carrying amount for short-term financial assets and financial liabilities. The carrying amount is a reasonable approximation of fair value due to limited credit risk and short time to maturity.

Fair value is set to carrying amount, in the tables above, for assets and liabilities for which no reliable fair value has been possible to estimate. This is valid for the line items investments in associated undertakings, investments in group undertakings, intangible assets, property and equipment and provisions.

Nordea holds very limited amounts of equity instruments measured at cost. Fair value is set to carrying amount for these instruments as the fair value cannot be measured reliably.

For further information about valuation of items normally measured at fair value, see Note 1.

**Deferred Day 1 profit or loss**

In accordance with the Group's accounting policy as described in Note 1, if there are significant unobservable inputs used in the valuation technique, the financial instrument is recognised at the transaction price and any trade date profit is deferred. The table below shows the aggregate difference yet to be recognised in the income statement at the beginning and end of the period and a reconciliation of changes in the balance of this difference (movement of deferred Day 1 profit or loss).

**Determination of fair value from quoted market prices or valuation techniques**

Fair value measurements are categorised using a fair value hierarchy.

The financial instruments carried at fair value have been categorised under the three levels of the IFRS fair value hierarchy that reflects the significance of inputs. The categorisation of these instruments is based on the lowest level input that is significant to the fair value measurement in its entirety. To categorise the instruments into the three levels, the relevant pricing models for each product is considered in combination with used input market data, the significance of derived input data, the complexity of the model and the accessible pricing data to verify model input. Although the complexity of the model is considered, a high complexity does not by default require that products are categorised into level 3.

It is the use of model parameters and the extent of unobservability that defines the fair value hierarchy levels. For bonds the categorisation into the three levels are based on the internal pricing methodology. The bonds can either be directly quoted in active markets (level 1) or measured using a methodology giving a quote based on observable inputs (level 2). Level 3 bonds are characterised by illiquidity.

Valuations of Private Equity Funds (PEF) and unlisted equities will in nature be more uncertain than valuations of more actively traded equity instruments. Emphasis is put on using a consistent approach across all assets and over time. The methods are consistent with the guideline "International Private Equity and Venture Capital Valuation Guidelines" issued by EVCA (European Venture Capital Association). The EVCA guidelines are considered as best practice in the PEF industry. For US based funds, similar methods are applied.

Level 1 consist of financial assets and financial liabilities valued using unadjusted quoted prices in active markets for identical assets or liabilities. An active market for the asset or liability is a market in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis. This category includes listed derivatives, listed equities, government bonds in developed countries, and most liquid mortgage bonds and corporate bonds where direct tradeable price quotes exist.

Level 2 consists of financial assets and financial liabilities which do not have directly quoted market prices available from an active market. The fair values are estimated using a valuation technique or valuation model based on market prices or rates prevailing at the balance sheet date and any unobservable inputs are insignificant in the fair value. This is the case for the majority of NBF's OTC derivatives, securities purchased/sold under resale/repurchase agreements, securities borrowed/loaned and other instruments where an active markets supply the input to the valuation technique or model.

Level 3 consists of those types of financial instruments which fair values cannot be obtained directly from quoted market prices or indirectly using valuation techniques or models supported by observable market prices or rates. This is generally the case for investments in unlisted securities, private equity funds, hedge funds and both more complex or less active markets supplying input to the technique or model for OTC derivatives, certain complex or structured financial instruments such as CLNs and CDOs, and illiquid bonds.

**Note 42 Assets and liabilities at fair value, cont.**

The following table presents the valuation methods used to determine fair values of financial instruments carried at fair value.

<sup>1</sup> Relates to those assets and liabilities held at the end of the reporting period.

**Note 42 Assets and liabilities at fair value, cont.****Sensitivity of level 3 financial instruments measured at fair value to changes in key assumptions**

Included in the fair value of financial instruments carried at fair value on the balance sheet are those estimated in full or in part using valuation techniques based on assumptions that are not supported by market observable prices or rates. There may be uncertainty about a valuation, resulting from the choice of valuation technique or model used, the assumptions embedded in those models, the extent to which inputs are not market observable, or as a result of other elements affecting the valuation technique. Portfolio adjustments are applied to reflect such uncertainties and are deducted from the fair values produced by the models or other valuation techniques (for further information see Note 1 section 11 "Determination of fair value of financial instruments").

This disclosure shows the potential impact of the relative uncertainty in the fair value of financial instruments for which valuation is dependent on unobservable input parameters. The estimates disclosed below are likely to be greater than the true uncertainty in fair value of these instruments, as it is unlikely in practice that all unobservable parameters would be simultaneously at the extremes of their ranges of reasonably possible alternatives. The disclosure is neither predictive nor indicative of future movements in fair value.

The following table shows the sensitivity of the fair value of level 3 instruments to changes in key assumptions, by class of instruments. Where the exposure to an unobservable parameter is offset across different instruments then only the net impact is disclosed in the table.

| Derivatives (net assets and liabilities) | 2,320           | 22                                                    | -29          | 2,320           | 22                                                    | -29          |

In order to calculate the effect on level 3, fair values from altering the assumptions of the valuation technique or model, the sensitivity to unobservable input data is assessed. For the derivatives portfolio key inputs, that are based on pricing model assumptions or unobservability of market data inputs, are replaced by alternative estimates or assumptions and the impact on valuation computed. The majority of the effect on the derivatives is related to various types of correlations or correlation related inputs in credit derivatives, interest rate OTC derivatives or OTC structured equity derivatives. For the level 3 portfolios of shares and debt securities the fair value was increased and decreased within a range of 3-10 percentage units, which are assessed to be reasonable changes in market movements.

#### Note 43 Obtained collateral which is permitted to be sold or repledged

NBF obtains collaterals under reverse repurchase and securities borrowing agreements which, under the terms of the agreements, can be sold or repledged. The transactions are conducted under standard agreements employed by financial markets participants. Generally, the agreements require additional collateral to be provided if the value of the securities falls below a predetermined level. Under standard terms for most repurchase transactions, the recipient of collateral has an unrestricted right to sell or repledge it, subject to returning equivalent securities on settlement of the transactions. The fair value of the securities obtained as collateral under reverse repurchase and securities borrowing agreements are disclosed below.

#### Note 45 Related-party transactions

Shareholders with significant influence and close family members to key management personnel in Nordea Group as well as companies significantly influenced by key management personnel or by close family members to key management personnel in Nordea Group are considered to be related parties to Nordea. Included in this group of related parties are Sampo Oyj, Nokia Oyj, Posten AB, Danisco A/S, IK Investment Partners AB and TrygVesta A/S. If transactions with these related parties are made in Nordea's and the related parties' ordinary course of business and on the same criteria and terms as those for comparable transactions with parties of similar standing, and if they did not involve more than normal risk taking, the transactions are not included in the table.

The terms "group undertakings" and "associated undertakings" refer to group undertakings and associated undertakings of the Nordea Bank Finland Group. In addition to the parent company figures stated above, the parent company's assets included receivables, interest-bearing securities, derivatives and other assets from other Nordea group undertakings in the amount of EUR 54,411m (68,351), liabilities in the amount of EUR 36,683m (43,480), net interest income in the amount of EUR 72m (90) and off-balance sheet commitments in the amount of EUR 431,155m (359,662). Off balance sheet transactions with Nordea group associated undertakings amounted to EUR 8,321m (7,202) and corresponding balance sheet values of derivatives were EUR 246m (155) in assets and EUR 80m (64) in liabilities.

**Compensations and loans and receivables to Key management personnel**

Compensations and loans to Key management personnel are specified in Note 8.

## Note 47 Credit risk disclosure

Credit risk management and credit risk analysis is described in the Risk, Liquidity and Capital management section of the Board of Directors' Report. Additional information on credit risk is also disclosed in the Capital and Risk management Report (Pillar 3) 2011, which is available on [www.nordea.com](http://www.nordea.com).

| <b>CDOs, net<sup>2</sup></b> | <b>181<sup>3</sup></b> | <b>873<sup>4</sup></b> | <b>213<sup>3</sup></b> | <b>922<sup>4</sup></b> |
| - of which Equity            | 114                    | 223                    | 108                    | 251                    |
| - of which Mezzanine         | 65                     | 101                    | 104                    | 129                    |
| - of which Senior            | 2                      | 549                    | 1                      | 542                    |

<sup>1</sup>First-to-Default (FTD)swaps are not classified as CDOs and are therefore not included in the table. Net bought protection amounts to EUR 218m (71) and net sold protection to EUR 53m (80). Both bought and sold protection are, to the predominant part, investment grade.

<sup>2</sup>Net exposure disregards exposure where tranches are completely identical in terms of reference pool attachment, detachment, maturity and currency.

<sup>3</sup>Of which investment grade EUR 181m (209) and sub investment grade EUR 0m (4).

<sup>4</sup>Of which investment grade EUR 873m (922) and sub investment grade EUR 0m (0) and not rated EUR 0m (0).

When Nordea sells protection in a CDO transaction, Nordea carries the risk of losses in the reference portfolio on the occurrence of a credit event. When Nordea buys protection in a CDO transaction, any losses in the reference portfolio, in which Nordea has not necessarily invested, triggered by a credit event is then carried by the seller of protection.

The risk from CDOs is hedged with a portfolio of CDSs. The risk positions are subject to various types of market risk limits, including VaR, and the CDO valuations are subject to fair value adjustments for model risk. These fair value adjustments are recognised in the income statement.

## Auditors' report

*This document is an English translation of the Finnish auditor's report. Only the Finnish version of the report is legally binding.*

### **To the Annual General Meeting of Nordea Bank Finland Plc**

We have audited the accounting records, the financial statements, the report of the Board of Directors, and the administration of Nordea Bank Finland Plc for the year ended on 31 December 2011. The financial statements comprise both the consolidated and the parent company's statement of financial position, income statement, statement of comprehensive income, statement of changes in equity and statement of cash flows, and notes to the financial statements.

#### *Responsibility of the Board of Directors and the Managing Director*

The Board of Directors and the Managing Director are responsible for the preparation of financial statements that give a true and fair view in accordance with International Financial Reporting Standards (IFRS) as adopted by the EU, as well as for the preparation of financial statements and the report of the Board of Directors that give a true and fair view in accordance with the laws and regulations governing the preparation of the financial statements and the report of the Board of Directors in Finland. The Board of Directors is responsible for the appropriate arrangement of the control of the company's accounts and finances, and the Managing Director shall see to it that the accounts of the company are in compliance with the law and that its financial affairs have been arranged in a reliable manner.

#### *Auditor's responsibility*

Our responsibility is to express an opinion on the financial statements, on the consolidated financial statements and on the report of the Board of Directors based on our audit. The Auditing Act requires that we comply with the requirements of professional ethics. We conducted our audit in accordance with good auditing practice in Finland. Good auditing practice requires that we plan and perform the audit to obtain reasonable assurance about whether the financial statements and the report of the Board of Directors are free from material misstatement, and whether the members of the Board of Directors of the parent company and the Managing Director are guilty of an act or negligence which may result in liability in damages towards the company or have violated the Finnish Credit Institutions Act, the Limited Liability Companies Act or the articles of association of the company.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements and the report of the Board of Directors. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation of financial statements and report of the Board of Directors that give a true and fair view in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements and the report of the Board of Directors.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

#### *Opinion*

In our opinion,

- both the consolidated and the parent company's financial statements give a true and fair view of their financial position, financial performance, and cash flows in accordance with International Financial Reporting Standards (IFRS) as adopted by the EU
- the financial statements and the report of the Board of Directors give a true and fair view of both the consolidated and the parent company's financial performance and financial position in accordance with the laws and regulations governing the preparation of the financial statements and the report of the Board of Directors in Finland
- the information in the report of the Board of Directors is consistent with the information in the financial statements.

*Other opinions*

We support the adoption of the financial statements. The proposal by the Board of Directors regarding the treatment of distributable funds is in compliance with the Limited Liability Companies Act. We support that the Board of Directors of the parent company and the Managing Director be discharged from liability for the financial period audited by us.
